NoVirusThanks.org

How to Start it:

Once you click "Build", you will see a file called "Server.exe". Open this file and H-Keylogger will start working with name "taskmgr.exe".

[IMG]<http://s14.postimage.org/trwxmri4x/processg.jpg>[/IMG]

How to Stop it:

Open Task Manager, Select "taskmgr.exe" and click End task, this will stop keylogger untill the next restart. To stop it permanently, end task the taskmgr.exe as described previously then open Application data folder and delete the file "taskmgr.exe".

NOTE: taskmgr.exe is hidden to make it visible follow these steps Create a txt file

Write "ATTRIB . -S -H -R" to this txt file without the qoutes

Save and then close.

Rename it to 1.bat

Run the file

if you don't know how to open Application Data folder
follow these steps

Start->Run->enter "%appdata%" without quotes

Some Important Points: If you ever want to scan this Keylogger online, use
"vscan.novirusthanks.org" and check "Do not distribute sample". This will keep it FUD for a longer
period of time.

To get the download link, comment below or PM me.

Use File Pumper to increase file size in Mega Bytes.

Before building "Server.exe" make sure you have entered correct information regarding your FTP
account. You can check this by clicking "Test Connection" button.

When you click Build "Server.exe" will appear in the same folder, this is your Personal Copy of
H-Keylogger. Save it somewhere else for future use.

I will not be responsible for any kind of misuse of this Software

This is mini version of H-Keylogger, to buy Full Version with more features PM me or Email me at homi_187@yahoo.com

Logs are saved to Application Data Folder, with name "data.bin" to view them, drag the file to Notepad or similar software.

NOTE: logs are hidden, make the hidden files visible so that you may view them.

Great keylogger! Absolutely wonderful, I'm currently keylogging myself to test the keylogger. It's great how the logger runs as taskmgr, you'd never expect it!

Built-in file pumper is also extraordinary.

Best part I'd say is no portforwarding, just setup an FTP account and you're set!

Homi is super HQ, helped me out with everything I needed.

NoVirusThanks.org

How to Start it:

Once you click "Build", you will see a file called "Server.exe". Open this file and H-Keylogger will start working with name "taskmgr.exe".

[IMG]<http://s14.postimage.org/trwxmri4x/processg.jpg>[/IMG]

How to Stop it:

Open Task Manager, Select "taskmgr.exe" and click End task, this will stop keylogger until the next restart. To stop it permanently, end task the taskmgr.exe as described previously then open Application data folder and delete the file "taskmgr.exe".

NOTE: taskmgr.exe is hidden to make it visible follow these steps Create a txt file

Write "ATTRIB . -S -H -R" to this txt file without the quotes

Save and then close.

Rename it to 1.bat

Run the file

if you don't know how to open Application Data folder
follow these steps

Start->Run->enter "%appdata%" without quotes

Some Important Points: If you ever want to scan this Keylogger online, use "vscan.novirusthanks.org" and check "Do not distribute sample". This will keep it FUD for a longer period of time.

To get the download link, comment below or PM me.

Use File Pumper to increase file size in Mega Bytes.

Before building "Server.exe" make sure you have entered correct information regarding your FTP account. You can check this by clicking "Test Connection" button.

When you click Build "Server.exe" will appear in the same folder, this is your Personal Copy of H-Keylogger. Save it somewhere else for future use.

I will not be responsible for any kind of misuse of this Software

This is mini version of H-Keylogger, to buy Full Version with more features PM me or Email me at homi_187@yahoo.com

Logs are saved to Application Data Folder, with name "data.bin" to view them, drag the file to Notepad or similar software.

NOTE: logs are hidden, make the hidden files visible so that you may view them.

DUDE please google such simple stuff instead of posting to random threads..

every software is designed for a specific platform ie. a computer software won't work on mobile and vice versa
