Thread: [Centering Javascript Images HELP! :\)](#)

Pernicious - December 8, 2012, 10:37 am

I have this code, and just want to center the image objects being displayed from my arrays.

PHP Code

```
<?php
function redeal(){

    var centered = document.createElement('div');
    centered.className = 'centered';

    for(x=0;x<playerarray.length;x++){
        document.body.appendChild(playerarray[x].image);
    }

    document.body.appendChild(layer); //this just adds a 'br', declared globally

    for (x=0;x<opponentarray.length;x++) {
        document.body.appendChild(opponentarray[x].image);
    }
}
```

And in the CSS I have:

PHP Code

```
<?php
.centered {display: block; margin-left: auto; width: 500px; margin-right: auto }
```

Just not sure how it works...or what it should look like..

Thanks Guys!

I'm not sure if I'm right here, as I hardly ever do webpage stuff, but couldn't you use HTML to center your image when you call the function? Sorry if I'm wrong, not my cup of tea.

You want to center the images in the <body> or in the specific <div>?

If inside the div, ignore all the other CSS you have for class ".centered. Just set "text-align: center; width: 500px" for the class .centered and that should do it. A block by default has display: block.

If inside the body, you have to set "text-align: center" to the body, then "display: inline-block" for the div.
