Thread: [Free skype resolver api | Direct code in thread](#)

Wyoming - December 9, 2012, 12:25 pm

Here it is:

Code [http://gwap.kodingen.com/skype/grab.php?username=\[USERNAME\]&method=1](http://gwap.kodingen.com/skype/grab.php?username=[USERNAME]&method=1)

For username it might be like \$name or Im not sure what you have it set as, if you need any help setting up your skype resolver, I would be glad to help.

thanks a lotfor you its probly:

Code \$ip =

```
file_get_contents("http://gwap.kodingen.com/skype/grab.php?username={$username}&method=1");
```

```

Yup, either that or without the brackets, either way works. Btw the API isn't working for me, always says "(current)"

Mate this resolver API isn't even yours, give credits to the owner.

Try this

PHP Code

```
<?php
```

```
$ip = file_get_contents("http://gwap.kodingen.com/skype/grab.php?username=$username&method=1");
```
