Very interesting: I'm lucky that I didn't bought Barracuda HTTP Bot.

Thank you.

Kernel Mode - December 9, 2012, 3:12 pm

The barracuda development TEAM are obviously all busy making love to potatoes.

betamonkey - December 9, 2012, 8:22 pm

I love how they spent all that time issuing updates yet didn't even fix the problem. It's not like they are dealing with a complicated issue here, the fix isn't even 1 line (You just wrap the fucking output with a certain function).

Either way everyone, go out and steal those Barracuda bots while you can, as it seems like the owners don't give a shit in fixing/protecting them.

Regards,
Beta Monkey

Yes, this is what is so pathetic about the whole situation. If I am right, it takes a long time to update all those customers, and to muck up such a simple fix - Even when the details of what was wrong was handed to you on a silver platter, is just plain retarded. I don't think the authors/staff understands that peoples bots were getting raped before and will continue until they take a moment and fix it right. Or better yet, just delete the entire project/sales threads and go learn something they can actually succeed in.

Regards,
Beta Monkey

Lysandre - December 10, 2012, 3:38 am

```
Code    if(isset($_GET['id'])
        && isset($_GET['os'])
        && isset($_GET['name']))){
        $result = mysql_query("SELECT * FROM bots WHERE id='" . $_GET['id'] . "'");is this a blind sql
injection i see ? ;)
```

Liquified™ - December 10, 2012, 3:42 am

I asked for a refund twice, no response.

I'm seriously disappointed.

I bought the full package, and the hosting was down for weeks, then the hosting got hacked and my bots were stolen.

Then they changed hosts, again, it was down.

This is complete bullshit.

I paid \$75 for peanuts... broken peanuts.

Mauler - December 10, 2012, 3:46 am

If customers are that worried I would recommend fixing it yourself. It takes probably 1 minute, if that..

Lysandre - December 10, 2012, 3:48 am

Indeed. But i don't think many people know about htmlspecialchars().

D??M! - December 10, 2012, 4:00 am

(Dec 10, 2012 04:46 AM)Mauler Wrote: [\[CITE\]](#) If customers are that worried I would recommend fixing it yourself. It takes probably 1 minute, if that..

Panel was encrypted. This deobfuscated link above is the first time we'll have the chance.

J?ck - December 10, 2012, 4:05 am

Seems like a big blow, I'm interested in why they didn't bother to fix all the vulns before even

re-releasing it.

Lysandre - December 10, 2012, 4:06 am

What was the obfuscation btw? i bet it was some lame eval() related stuff, lol.

redpois0n - December 10, 2012, 4:27 am

(Dec 10, 2012 04:38 AM)Wack0 Wrote: [\[CITE\]](#) Code if(isset(\$_GET['id'])

 \$result = mysql_query("SELECT * FROM bots WHERE id='" . \$_GET['id'] . "'");is this a blind sql
injection i see ? ;)
What can you do with that? Blind sql injection?

Lysandre - December 10, 2012, 4:50 am

(Dec 10, 2012 05:27 AM)redpois0n Wrote: [\[CITE\]](#) What can you do with that? Blind sql injection?
Well, you COULD possibly get data out of the db, but it'll be very hard, you'd have to actually verify
if it was inserted or updated, because nothing is given from the db. If there was a die(mysql_error())
it'd be a nice error-based injection, but there isn't, so...

Shiroyasha - December 10, 2012, 5:44 am

(Dec 9, 2012 03:41 PM)_Stoner Wrote: [\[CITE\]](#) and obfuscated the panel code slightly.
Slightly ? Did they even paid any efforts in trying to secure atleast the code of it ?
All they did was encrypt the php code with byte 64 which is the first thing anyone can do if they
search google for "Crypt php code" or w/e

It is so easy to decrypt back to php code using online tools itself.

They could have atleast re-crypted the crypted code atleast 2-3 times or rather encoded it or used
more better protection techniques

And god, for people making \$50+ per sale, how hard is it to buy Zendguardian or ioncube

Lysandre - December 10, 2012, 6:26 am

lol, they just did eval(base64_decode()) ?!

lololololololololol

xRate - December 10, 2012, 9:09 am

That sucks lol. inb4 OPs slaves get stolen.

betamonkey - December 10, 2012, 2:53 pm

(Dec 10, 2012 03:48 PM)debug Wrote: [\[CITE\]](#) If the panel is leaked deobfuscated, why don't you just patch it yourself?

It shouldn't be up to customers to fix the product they bought. 'Barracuda team' should fix it themselves, it is so god damn easy I cannot even figure out why they can't or won't. On that note - It makes you wonder how shitty other parts of the project are, considering they really bungled this part of it.

Beta Monkey

Beta Monkey

I like that word... 'bungled'

But yeah, why should the customers have to fix a product they paid good money for? The software should be sold in good and working condition.

The solution the 'Barracuda Team' proposes is that users of the bot should password protect the login directory. Seems to be more of a nig-rig solution than anything good.

Plus, password protecting the directory wouldn't stop attackers from injecting an iframe of their exploit pack or java driveby into the Barracuda HTTP dashboard in order to infect the owner of the bot panel.

debug - December 10, 2012, 8:32 pm

(Dec 10, 2012 03:53 PM)betamonkey Wrote: [\[CITE\]](#) It shouldn't be up to customers to fix the product they bought. I don't know you as I do not converse with idiots such as yourself. I've never even been to hackhound so if you're from there I have no idea.

Anyway I'm going to go back to coding, always the same idiots different day. You're boring, you waste my time I have nothing to gain arguing with .net kiddies. Bye.

So you are iarkey, some idiot that can't code for shit. go back to learning c++ on youtube as you always were..

i'm surprised, you can't tell who i am? jesus your memory is terribl\$

Lets recap.

From searching your posts i can find: You code malware in C#, you lack basic knowledge of programming, you are a member of hackhound and seem like a generic idiot. What makes you think anyone would bother remembering someone as unimportant as yourself?

"hurr hurr hurr I'm going to claim you can't code, I think I'm better than you, yet i cant even be bothered to learn a proper language" Grow up & come up with some original insults.

Please stop trying to waste my time (this is my last reply here). Obviously you're just another kiddie looking to follow me around the forum crying because someone upset you.

keyword: seem

you're getting there iarkey. I'm calling you out because i use to be good friends with you. You don't have any balls to admit it but you went on youtube for c++ yes i remember..

oh yes that sounds very logical, shouldn't you be a class A programmer?

for my final question explain how c# is improper lol

redpois0n - January 15, 2013, 7:14 am

Maybe languages such as C and C++ is better for malware, but that does not make .NET "shit". Maybe it is bad for this purpose but still not shit.

lol java
you think something running on a vm is more pwoerful than c#

He thinks many things this guy! ?

Many great and powerful applications has been made in .NET.

Paint.NET for example. Dont tell me it is shit.

Yes, I dont like how people say it is SHIT.

Might be really bad compared to c++ in malware world but it does not make the language shit.

why isnt it working without net framework from the beginning lol ?

In case you haven't noticed, this is a thread about malware. Stop fucking going off topic to defend your lack of ability to code C/C++.

".NET is a reallly great really powerfull language and i love it" - .NET kid who can't code C++

No, I cant code .net either ?

I agree that you look down to it as you know c++. But it does not make it shit.

For malware yes it does, non malicious .NET programs are fine though.
