How to check file ? is safe or not safe ?

i mean like this :

Scan type: Auto-Protect Scan

Event: Threat Found!

Threat: Downloader.Trojan

\\ADMINI~1\\LOCALS~1\\Temp\\Rar\$EX00.172\\DDOS Files\\DDos Tools\\Tools\\Biozombie\\[CLEAN]  
BioZombie Bot.exe

Location: \\ADMINI~1\\LOCALS~1\\Temp\\Rar\$EX00.172\\DDOS Files\\DDos Tools\\Tools\\Biozombie  
Computer:

User:

Action taken: Clean failed : Quarantine failed : Delete succeeded : Access denied

Date found: samedi 29 août 2009 22:08:36

Thanks for answers !

You use an online malware scanner. Google is your friend.

**Hick** - December 10, 2012, 12:42 pm

Virustotal is a fairly reliable site.

Google it, you'll be happy.

**Vile Soul** - December 10, 2012, 12:42 pm

virus total it (unless you are testing a crypted file or FUD) that or sand box it.

if you are talking about if you wanted to post it in a thread then you can scan it and take a picture of the page and post it in your thread.

hope i answered your question - good luck.

It looks like that file is infected but scan it multiple times and i would download malware bytes and if you already ran the file run in safe mode and look for it there

bio zombie is a ddos client it uses a server to gain connections to other computers which upon infection become your "slave" then you can use them to ddos websites other home computers etc.

try using the search bar if you are curious about something =)

**ram-raid** - December 10, 2012, 12:50 pm

Could be a false positive. Unless you want the file to stay FUD or something use an online malware scanner. You can always use it in a VirtualMachine.

**Makabra666** - December 10, 2012, 12:50 pm

thanks for answers.

Good Luck
