Thread: [Bullying and Cyberbullying](#)

C0_N03_k13 - December 10, 2012, 7:42 pm

Hi i want to make something like a virus where it goes to lots of computers and reads off a message to them, is there a way to do something like that

ShadowX13 - December 10, 2012, 7:45 pm

I have no idea, but if there is, like to take down confirmed cyberbullies, then I say go for it!

?Hycca - December 10, 2012, 7:47 pm

This does not belong in the Website and Forum Hacking section. On-topic, you are better off using a remote administration tool.

Dyme - December 10, 2012, 7:47 pm

Looking into something called a "R.A.T". It'll give you full access to the victims P.C. and you'll certainly be able to read off your message. For more assistance please refer to the [Remote Administration Tools](#) section, as that is the correct sub-forum for this topic.
