Thread: [Unblock certain things](#)

Zaming - December 10, 2012, 11:31 pm

I'm not sure what it is that HF blocks from this site but I tried accessing this site from my Amazon Kindle Fire HD last night and Access is Denied!

It uses the same ip ask my Desktop.

Thanks

Max ?? - December 10, 2012, 11:35 pm

Hmm, perhaps the site was getting DDoS, either way does it currently work now?

Can you take a picture of the Access is Denied error? What's the exact URL that you were trying to access on HF? Is it possible that the network you are connected to is preventing the Amazon Kindle Fire from accessing HF? Are you connected via wifi or to the 3g network that comes with it? I feel that your IP isn't the exact same unless you're tethering your Fire to your desktop.

You may be receiving an Access Denied error if you're trying to access a part of the website that you do not have permission to access. Did you try multiple parts of the website and are you getting the same error the entire time?

You said you were receiving the error last night, are you still having the issue or did it resolve itself?

There is no 3g on my Kindle.

Yep 403 Forbidden Error. I don't know how to take screenshots with my Kindle Fire HD.

"Forbidden

You don't have permission to access / on this server.

Additionally, a 403 Forbidden error was encountered while trying to use and ErrorDocument to hand the request." blah blah blah

When I try to get on this site with my phone it works just fine.

G??n - December 11, 2012, 12:16 am

Maybe because your home IP is firewalled, but not your phone's IP. That's if you're using 3G on your phone.

Ah, for some reason I was assuming that accessing HF on his desktop was working. OP can you check to see if you get the error message when trying to connect with your desktop computer?

Prince™ - December 11, 2012, 2:25 am

May be you are using a VPN. Right ?

Vinnie - December 11, 2012, 5:15 am

It's either the firewall on your Kindle or it's because you need to clear your cache and cookies OR it's because you need to enable your cookies on your Kindle. Try all of these and your problem should be fixed.

When you have a web page open, you can tap the Menu button at the bottom of your Kindle Fire and select settings. Tap "Clear cache" and "Clear all cookie data", selecting "Ok" for both. If this does not work try enabling your cookies that should fix this problem.

Je\$us - December 11, 2012, 5:17 am

Sounds like you have been firewalled, contact omni with your up address.

Cragle - December 11, 2012, 6:23 am

Yea, contact Omni about it or just try using your computer only. I hate when this happens. :/
