Big Vouch for Chronic Crypter

This guy won't let you down and the crypter has been running for long time ago

Mr. Bean - December 11, 2012, 8:00 pm

Big vouch for Banksy, thanks a ton for the update !

?Mephobia - December 11, 2012, 8:20 pm

Vouch for mah big boy! He is in it for the customers and satisfaction, not for the money. His support is top notch and he actually cares about his customers!

Pr4wn - December 11, 2012, 8:22 pm

Love the product. Amazing deal I got on this and have great success with it. Best deal on HF right here.

king0demons - December 11, 2012, 8:26 pm

Amazing product, even more amazing support, if there is something that it doesn't crypt he will try to get it compatible even if that means contacting the seller and having to collab an update with them.

Sir Cyrano - December 12, 2012, 2:19 am

New Thread New Vouch for you Bansky, The best Coder in HF !

Neal Caffrey - December 12, 2012, 3:48 am

I've got a copy of this, and it's fantastic! (:

BEST CRYPTER IN HF HISTORY!

is botkill remove other bots or anti-botkill process

It's a very 'primitive' botkiller. All it does is attempts to kill any files running in temp/appdata and removes them.

This might be added on to later, but it's not on my to-do list as of now.

Hello. I am writing on behalf of a friend (Owl City) in great distress. He is currently banned for 7 days so he cannot post himself. Anyway, he believes the authorities are about to use one of his RAT slaves to trace back to himself. He is desperately trying to completely delete his server but every time he uninstalls it, it comes back due to the Anti-Delete in Chronic Crypter. He has used the default startup/installation options and injected to cvtres.exe

How should he delete the malware? This urgent. Thank you.

Little Pump - December 15, 2012, 6:24 pm

Wow, Banksy is legitimately fucking amazing. I had trouble with the crypter and he went on TV to help me with it himself. All I can say is his support is amazing, and I'm about to try the crypter now, lets see how it is :)

Titanium³ - December 15, 2012, 7:59 pm

I was getting 1/35, but now I'm getting 6/35
Then I changed a few things and I get 4/35

It all depends on your settings.

GlenDavis11 - December 15, 2012, 8:20 pm

While I haven't bought this crypter myself (as I'm not a fan of grey-hat intrusion so I don't need it), I must say Banksy is an exceptionally helpful and supportive member of this forum. There is an atmosphere of trustworthiness and friendliness when I speak with Banksy. I PM'd him yesterday on behalf of a friend (Owl City, who is currently banned for 7 days) regarding the removal of malware crypted with Chronic Crypter (since my friend IS a customer) to evade detections by the authorities.

His response was amazingly fast, despite the fact that I was not a customer. He gave high-quality advice and coded a custom program for my friend to negate the effects of Anti-Delete on the crypter. He even took the time to answer other questions regarding TeamViewer.

Since I don't like to engage in grey-hat activities such as ratting/keylogging etc, I don't really need

this crypter. But all I can say is, if I ever needed a crypter, this would be my first choice. Banksy is extremely high-quality and unconditionally helpful.

Thank you, Banksy.

BlackRockShooter - December 16, 2012, 2:41 am

Tried almost every setting possible - can't get DarkComet under 6/35.

Use Solitude!

Solitude RAT has much more functions then DarkComet, the only thing I'm not sure about is how stable it is.

Settings: Solitude RAT, HQ Icon, Startup - Temp, Patch PEB, Sonar/Avast, Injection - csc.exe, Fake Assembly.

Remove "Chronic V8" - Open "Chronic (Crypter).exe" again, it will download the newest version.

Still 1/35 - Perfect crypter.

Only ESET NOD32 detects it.

PedroDJ - December 18, 2012, 4:02 am

The Kazy Detections are for LQ Icon and not valid Assembly: so use HQ Icon and clone valid Assembly Infos.

Are you running the latest version? Try redownloading and then deleting "Chronic.exe" and running "Chronic V8.exe"

When did this start happening? I've heard of things like that happening with CyberGate, and it was fixed with using the PEB Patch option.

Also, to everyone, I forgot to mention this but I have updated the crypter.

Anyone tested this with chrome miner,just wondering...if the owner of the thread wants to contact me I can provide a crypted bin to test/tinker around with to see if it crypts.

Was looking to buy a crypter that works with this program and wasn't a blasted monthly sub,this looks to be my best option.

Try PEB Patch if the crypted files doesn't work: I have tested PEB Patch with Predator Dynasty 8 [it didn't work once crypted without PEB] and it works like a charm :D

Agreed. This is the best crypter on HF IMO, although I miss the extension spoofer.

As said before: use a Valid Assembly information and an High Quality Icon, you can reduce detection to 2 / 35 [GData / Eset detect it]

I and other users are experiencing Avira / Avast detection on file runtime: Banksy is working on it :)

- Fixed Kazy once again.
- Fixed Avira's "TR/Dropper.Gen"
- Fixed Avast and G Data's "Win32:Dropper-MFW [Drp]"
- Fixed ESET's "Trojan.MSIL/Injector.AWH"
- Changed the stub code a LOT.
- Edited the save system a little. Some minor bugs are fixed, it should work better now.

That eset detect depends on that people use eset at their computer when they crypt.

It sends a sample of the cypted file automaticly to eset and thats how it gets 1 eset detect.

(Jan 22, 2013 04:25 PM)BANANAS Wrote: [\[CITE\]](#) Is there any specific way to set this up before hand in Dark Comet?

For best results, all you should do is set up things in the "Main Settings" tab and put in your IP/DNS info on the "Network Settings" tab. That is it, do everything else in the crypter. I am not sure what you can use without any side effects in the "Module Shield" tab, but the things in that tab don't normally work anyways. Also, in the "Stub Finalization" tab, make sure you set it to no compression. (The reason you shouldn't use the Minimalistic editor is because it automatically compresses it with UPX.

Sorry for the long paragraph.

Now it has been fud for 5 days, last time it did take something like 7-8 days till it was 5/35 with DC. Usually week or even more (correct me if I'm wrong).

Anyways, this is so amazing crypter, and maybe best on HF (haven't tested anything but this, but I have heard so much bad about some crypters), so this is defiantly worthy of buying.

I can't wait for this update since I haven't been able to use it for more than 1 week and I lost 90% of my slaves

Banks? - January 29, 2013, 8:48 pm

Changing quite a few things up, a lot of the inner workings are going to be improved, which should lead to longer FUD times as well.

Update will be out tomorrow and will get rid of the ESET detection.

Detection rate (not finished completely, still have a lot to do):

That's fine, I realize that some products are not for everyone.
If you don't like this crypter, then you are not obligated to buy it.

That does not mean, however, that you should post on the thread saying my product is bad, without owning or using it, and start insulting my customers.

You can keep your opinions to yourself, this is a sales thread, not a discussion thread.

Update released.

- Changed inner workings of the stub a LOT. Should be a lot harder for antiviruses to detect, which will bring longer FUD times.

Detections removed (was 1/35 before update):

- Fixed ESET detection.

hi,

I just recently purchased this crypter but I have some problem with the startup function.

I was trying with Cybergate 1.05.1 and Darkcomet 5.3 but got the same results.

settings:

server side: disabled everything (except ip/dns settings)

crypter side:custom icon, real assembly info, startup enabled (Temp/winini.exe), injection enabled (svchost.exe)

The crypted server was working fine on (vmware windos xp sp3) but after restarting the infected pc the server didn't

start and didn't connect again.

My OS is win 7 64bit

any ideas? (sry for my ban english)

With dark comet don't use any options in the dark comet client it's self and if you want to add start up and a icon use chronic. Just remember to save the crypted file name as test and just change it later.

Also use valid assembly and hq icon

I would recommend dropbox. Contrary to popular belief, they do not upload to VT. Mediafire does send it to at least BitDefender, as far as I know.

Try setting "Inject" to false. Usually that happens to installers and any type of file that isn't an executable (such as an image or video).

Wow....this crypter is still going???? Banksy, sir, you are one persistent and amazing motherfucker. Props to you man!

Six Below - February 14, 2013, 8:14 am

Just PM'ed you about purchasing. Hope to hear back soon! Thanks!

Bing™ - February 14, 2013, 12:00 pm

Fuck I paid 15\$ 5 month ago...

The cheapest crypter and is always FUD... Omg Banksy raise the fucking price :)

Banks? - February 14, 2013, 12:20 pm

I plan on raising the price in the near future.

I know the scanner isn't working right now, I have to pay for the Scan4You account, which I will soon.

A little short at the moment.

GanDino - February 14, 2013, 1:11 pm

nice Crypter. best price. and fud.

leaves the competition far away behind you, big vouch

Six Below - February 14, 2013, 2:14 pm

Just received crypter! Thanks a ton! Sent me the DL within 10 minutes of paying! Highly recommend.

Desperados - February 14, 2013, 2:27 pm

Recieved it fast after payment. Tried one and its 6/35 somehow but Ill try something else.

Working on this right now. Update should be out tonight.

Jim Newman - February 14, 2013, 4:08 pm

Honestly one of the best crypters for the price. Most expensive crypters don't even receive this many updates!

Persson - February 14, 2013, 4:19 pm

Really nice crypter, if you are getting 6/35 and the detection's are for something like Gen:Blah.blah or something like that, go into the build tab and set the title to anything with at least one space, make the description and product the same thing, and put "Copyright © 2012" or "Copyright © 2013" for copyright (without quotes). Then set the version to at least 1.0.0.0.

This works for me at least. Av's started looking at the assembly info to see if it looks legit.

?unner - February 14, 2013, 8:59 pm

Hey banksy when i try to use a message it keeps giving me an error... it wont tell me the error it just says unable to build but when i unchecked the message it allowed me to crypt the bot if you can help thanks...

Use valid assembly and HQ icon. Also don't name your server like "crypted.exe", but like test.exe is much better.

Have you been using Virustotal for scanning crypted file? Banksy should ban your license for doing that... Don't ever use VirusTotal for scanning crypted file. Also I don't know when Banksy will buy it, but he said like 2 days ago he will buy it soon or something like that.

Edit: Quote from Six Below's PM : Ok. Sorry I'm a new user. Super bad move on my part I didn't even know. I never scanned any file I crypted with this crypter on VirusTotal. VirusTotal wasn't working for me way before I ever bought this crypter.

Update Released

- Scanner moved to Cyber-Software's scanner after receiving an offer from them. The scanner shouldn't go down anymore due to low funds or anything like that.

Detections:

- Removed Gen:Variant.Kazy.142847

- Removed BackDoor.Comet.152 (Dr.Web)
- Removed Trojan.MSIL/Injector.BCF (ESET NOD32)

You can remove the Kazy Detection using another HQ Icon and a Valid Assembly: have you tried ?

I think it's name, or then just anti-viruses don't like WinRAR icon and assembly. Try without them and I will be sure you will get FUD server again. :)

Is it written in .NET? If so it should work for sure, but if it's not then I'll have to see.

Is it normal to have to change the icon and assembly every time a new FUD update comes out?
With the last update I was getting FUD using an icon and an assembly, but with the newest update trying the same icon and assembly gives me 10/35. I just tried crypting it with a completely different icon and assembly and I got 0/35. Does anyone know why this is? Maybe the people downloading the virus scanned it, and now the virus scanners see that icon and assembly set up suspicious?

Thanks for the help!

Proxy

When you get the chance can you fix Gen:Variant.Kazy.145036? It's causing 5 detections when I try and use a fake error. Other then that I can get FUD.

Thanks

Lol, only AVG showing as detected. ?

GanDino - February 19, 2013, 12:50 pm

1/35 avg get's it. tried a lot of different assembly and different HQ Icons, from now on all detected by AVG.

SIM-553562 - February 19, 2013, 12:52 pm

GanDino you are FUD or you are detected by avg only?

I need to make it undetected from avg..

Roarax - February 19, 2013, 1:49 pm

Yep I get that aswell AVG is detecting it

Any one else having the problem where the crypted file just causes the blue screen of death then crash? I was happy with the update seeing it was FUD, but I seemed really low on slaves. I tried to run the crypted file on my computer and I got the blue screen of death followed by the computer crashing.

Any help? Thanks

That's usually because you name the file "crypted" or something like that. It might be your assembly or your icon also.

Yeah true. I was just well mad, so I did say something what's almost impossible without backdooring. Anyways, I hope who ever did that will stop that. :s

Sane™ - February 22, 2013, 1:30 pm

Remove the exe from the home page, people are scanning that making it unfud, and stop selling to LQ members, only sell to upgraded members and your crypter will be FUD more.

And another thing is, not everyone is scanning it on virustotal, your victims could be when your

spreading so don't blame every costumer.

Guys, don't sale trash his thread, if you have issues PM him. He doesn't have 24/7 to fix the crypter due to all you skids scanning it on virustotal, can't you get a life and give Banksy a break for once?

Regards,
Sane™

I don't know if this is possible but possibly make the stub created under the netseal username then it sends the stub to your email and possibly you code a thing if its been scanned on virustotal, and if it has ban there license?

And give everyone a seperate exe, and do the virustotal checker.

I know it might be alot of work.

But its a great suggestion.

I can post here :)

- 1) HQ Icon [taken from iconarchive.com]
- 2) Startup / Installation Enable [do not use clearly fake installation name]
- 3) Injection Custom
- 4) Sonar/Avast + AntiDelete
- 5) Assembly cloned from Filezilla Setup File

I use this setting with BS 5.5.1 and I got 1 / 35 [last check yesteday]

Feel free to PM me if you need further assistance ;)

Banksy must be really busy as normally he would have updated it by now

Maple ?? - March 6, 2013, 5:12 pm

Can anyone update me on the current detection rate? And how long has it been like that?

PedroDJ - March 6, 2013, 11:47 pm

Many crypters I have bought on HF are outdated and detected, no updates from weeks: Banksy, please, any ETA for the update?

kinky82 - March 7, 2013, 2:54 am

I can understand that crypter is only 15 dollar lifetime and you cant expect quick update, understand also that people sometimes have problem to solve IRL but 20 days whit no update is enough.

biotech - March 7, 2013, 3:38 am

I got to agree. We need a update and I keep losing my slaves etc i think he should take on some help.

GanDino - March 7, 2013, 3:34 pm

wow, got 20% warning level for asking if there are any news known yet. didn't know that this is against the etiquette. however, an update would be great on this great crypter.

Dseko - March 8, 2013, 4:24 am

Where Banksy is when we need him! :D

I seriously just want update and can't wait for that.

Kapama - March 9, 2013, 2:05 am

I'm loosing my slaves very fast

Please Banksy an update, we need it.

?NoShame - March 9, 2013, 9:41 am

Banksy.. We need an update now.. It's not FUD at all..

Dubai - March 9, 2013, 9:42 am

600th poster! Congrats to this thread and op!

Banks? - March 9, 2013, 11:33 am

Update released.

Well, first, I think I should take the time to say sorry. Obviously it's been a while since I've updated. I don't expect you to be okay with me just saying sorry, but I feel it's necessary anyways.

The last few weeks have been the end of the quarter in school and my grades were falling. I spent nearly all my time working on getting them up. The quarter is over though, so that's no longer an issue.

I was also having troubles with a "Kazy" detection popping up with larger files such as DarkComet, which I have fixed.

Anyways, on to the update:

- Removed "Trojan horse MSIL.ITA" - AVG
- Removed "MSIL:Injector-BR [Trj]" - Avast, G Data
- Removed "Tr/Rogue.kdz.9732" - Avira
- Removed "Trojan.Generic.KDZ.9732" - BitDefender, F-Secure, G Data, BullGuard, Immundet
- Removed "BackDoor.Comet.152r" - Dr.Web
- Removed "Trojan.Msil" - IKARUS Security, A-Squared
- Removed "Trojan.MSIL/Injector.BCP" - ESET NOD32

Also moved back to Scan4You. CyberScanner dropped my account for too many scans.

I will be implementing autobuy (thanks to Net Seal) in the near future, and with that, the price for lifetime will increase.

With the autobuy system, I will now be having different packages: 3 months, 6 months, and lifetime are most likely.

It's fud on scantime but on runtime it is detected.

It's the same as nothing if it's detected on runtime...

If you find this fud runtime i think you dont know what fud means.

TheDevilMan - March 10, 2013, 9:21 am

I can confirm that this is DETECTED during runtime no use :(

DarkClouds - March 10, 2013, 9:46 am

why it's detected on runtime.

i've tested with kaspersky detected and got deleted ?

PedroDJ - March 10, 2013, 9:48 am

I'm sorry but really seems detected in runtime by Avira....

Magiz - March 10, 2013, 9:50 am

Do you get it instant when you have paid ?

GanDino - March 10, 2013, 11:21 am

okay, I correct my remark. it's runtime detected by some AV`s.

I saw Norton 360 picking it up.

but I am sure that will be figured out shortly.

Banks? - March 10, 2013, 3:56 pm

Update released.

I changed the crypting engine a bit to hopefully fix the runtime detections.

If you are still getting runtime detections, please report them.

Not for blaming (months ago was perfect) but actually service is totally useless.For people that dont know how it work,is not only important to be fud on your scanner but mostly RUNTIME because when you execute your file the runtime detection will trigger quite all AV.

I simply misunderstood him. Keep in mind I said it nice because I figured he thought he could share it. Not a big deal. Calling me names is though. I was actually fixing to delete that and the rep because I noticed his post was gone and I didn't want to spam the hell out of this thread but since you got yourself involved and smeared it in further.. But ya, truth be told I don't think the program would generate an error even if he shared it. So it was a mistake on my part but in no way did I insult him. Either way best off not calling people names. So do I feel bad? Not a chance. I'll delete the rep and the posts only because this is Banks thread and I shouldn't be giving negs to his customers.

(Mar 12, 2013 11:27 AM)Pr4wn Wrote: [\[CITE\]](#) I simply misunderstood him. Keep in mind I said it nice because I figured he thought he could share it. Not a big deal. Calling me names is though. I was actually fixing to delete that and the rep because I noticed his post was gone and I didn't want to spam the hell out of this thread but since you got yourself involved and smeared it in further.. But ya, truth be told I don't think the program would generate an error even if he shared it. So it was a mistake on my part but in no way did I insult him. Either way best off not calling people names. So do I feel bad? Not a chance. I'll delete the rep and the posts only because this is Banks thread and I shouldn't be giving negs to his customers.

Regardless of who is right or wrong, it doesn't matter. This is a sales thread and discussions of things like that do not belong here.

I will be looking at the runtime detections tonight.

Can you guys tell me all the antiviruses that are detecting on runtime for you, so I can make a list and download them on a VM to test?

Excellent product, big vouch for this. You REALLY can't beat the price for how well it works either.

The runtime detections are related to how the crypter sets the process name in task manager (by copying C:\Windows\Microsoft.NET\Framework\v2.0.50727\cvtres.exe).

I will come up with a new way and have it fixed by tomorrow most likely.

I am working on it though, and I will update you guys as to what's going on.

Just gonna toss this here. This crypter is awesome, I think the Un-FUD is very recent, and I have faith in it's coder to fix very soon. He's good about this stuff.

Banks? - *March 17, 2013, 4:09 pm*

Update released.

- Fixed scanner not logging in/not displaying results (scan4you changed their html).
- Fixed most (if not all) runtime detections. Norton Sonar no longer needs to have the "Sonar/Avast" option checked (I will change that next version, I forgot), but Avast does.
- Fixed AVG Free scantime detection
- Fixed Sophos "Mal/DotNet-C"

I AM expecting issues with this version, so if you have any, please let me know! This update changed a LOT with the stub's core, I might have messed one or two things up.

Also, a new RunPE will be coming in one of the next updates, which will allow for self-injection, so what you save the file as (or what you selected in startup) will be the name in task manager.

I have the same problem with different server..

PedroDJ - March 18, 2013, 11:36 am

Seems clear that last update went wrong: just wait for Banksy, not needed to post here every AV Scan you made it ;)

Jimmy45 - March 18, 2013, 11:51 am

Where is the Injection Feature going?

And also not FUD anymore (I am getting 2/35), before the update it was FUD for me.

Tomoko Kuroki - March 18, 2013, 11:52 am

Bansky should already know the problem, I'm guessing only Dark Comet was fully undetected.

Tried;

Dark Comet [0|37]

Blackshades [2|37]

CyberGate [8|37]

Andromeda [4|37]

It was a rushed release as he "kinda" said in previous post, he'll surely fix it in less than a day

Market™ - March 18, 2013, 12:41 pm

It's still FUD for me, even my old one was only 1/35..

But i'm getting 1/35 with the anti delete option on, damn Avira is catching it!!!!

No way to get around that, but overall a VERY VERY nice crypter for me.

Best buy on HF for now..

?V?? - March 18, 2013, 12:50 pm

Yea I noticed That You Removed The Custom or Inject To Thing and that The Update is Not FUD (BlackShades NET) Although My Other Thing Is FUD So i have No IDEA

(Mar 18, 2013 10:38 AM)Joe67 Wrote: [\[CITE\]](#) The anti avast/sonar corrupt my file . Thank you No it doesn't, it simply delays execution of the file so the antiviruses think it's clean.

Just posting so we all can see bugged post.

Edit: Oh you was faster Banksy. Anyways, how's the update going on? Any ETA for it?

Banks? - March 18, 2013, 5:31 pm

I've got the detections down to Avira, and that is only popping up when files are binded. An update will be out shortly once I fix this.

Don't quote me on this, however he might have the Name column update from like a text file and the date from an hour based (or maybe even your date) so if your time was far enough ahead of his it was a new day for you when the text file was updated 3/17. Just what I assume at least.

Hey,

Maybe you did use anti-sandbox thing when you did crypt your file, so that's why you cannot execute it on sandbox. :p

Hey Banksy, I have a question, If I make a file fud which is only about 7/35, and leave it, will it return to 7/35 after a few weeks or will really increase to 20 or something?
Thanks.

It will increase, obviously: once the file is detected, the detection can only raise up :)

Alright now I'm having a problem, I'm getting an error occurred while crypting as soon as it reaches Finalizing crypt, Banksy I hope you fix this, I'm starting to lose many slaves as I can't use the crypter since last update.

Godzkiller - March 21, 2013, 4:01 pm

Hey man just wondering if you have any recommended settings for using the crypter with
BlackShades?

I'm having issues with it atm. I can't get the bot to run on start-up. I've been testing it on a mates old
laptop. It connects but once he restarts it doesn't come back on.

Tried using the start-up options on blackshades, and no start-up option n the crypter and
vice-versa, with no luck.

After it is encrypted and I upload it for him to download it also seems that Google Chrome warns the
user that the filer may be a virus, even after it's been encrypted.

It will download updates, so the first download is sort of only a downloader for the rest of the software.

PS: Vouch for Chronic Crypter, It's really good.

This is probaly a dumb question but is the crypted file .NET dependent? (I think it is since it doesnt say its "Not dependent" but I'm nor sure)

It's just a loader file. It downloads the latest update when you sign into it.
I mean the error occurred while crypting error, I'm sitting with a 11/35 stub from the last update..

Considering the amount of problems that are occurring with this version of the crypter and the stub, I believe it is time for a recode.

I cannot say how long the crypter will be without an update for, but hopefully not long.

I am sorry, but Chronic will be back to full functioning soon.

Update released.

- Fixed "BackDoor.Comet.152" - Dr.Web

- Fixed "Gen:Variant.Kazy.157248" - The usual.

Fixed (possibly) some problems with DarkComet not running correctly. Make sure to check svchost or wininit.exe in the injection box if you are having problems.

Also fixed problems where adding to startup would add extra "\"s to the key.

Note: this is not the recode, it is still in the works. I will keep updating chronic in the meantime.

Yep, tonight. Just finishing up some things on the server, and if all goes well, it will be up soon.

I'm not going to bed until I get it up and running, even if things do go wrong and I have to get a different server.

That is because Banksy is working on completely recode the crypter since the old one had some flaws. It was getting harder and harder to make FUD without corrupting the server and in the end it was getting a little glitchy at some parts. The crypter is outdated but will most likely be updated with a V9 tonight(according to Banksy). That update will(hopefully) fix all the errors and make it completely FUD again.

I have not regret my purchase, neither should you :)

Vouch for this crypter and Banksy himself.

Something for cybergate?

I don't know what the "(CG)" means, but the Patch PEB alone is a a feature that makes sure the it runs your crypted file in the proper "block" so to say of a computers runtime environment. If your crypted file doesn't work when ran normally, this can help because sometimes it is because it gets run automatically in the wrong part of a computer. I know that I had to use this to get my RAT to work on Win 8, but with the whole recode I am not sure exactly the best use for it.

TL;DR - Runs it in the write part of the runtime environment so it works.

the icon changer won't work. but still use a unique icon in the crypter. after you crypted your file, change the icon with resource hacker. scan the file, and it should be fud or 1/35.

use an unique icon in the crypter, even if it does not show up.

after crypt use resource hacker to add the icon you used in the crypter.

scan it...should be FUD or 1/35.

First, the icon changer doesn't work.

Second, with 5 different files and different icons as per suggestions, it's still detected.

Third, none of the crypted files want to run properly.

I'm not gonna post images, because it's useless as you'll say "Make sure you're using the correct Dark Comet settings".

So, if anyone wants to show settings that are "correct", I'll try with those.

Thanks for getting back to me Banksy. 'NetLib.dll' is there and the warning still pops up upon

opening program. BUT, now the program no longer crashes!

I hit the continue button and proceeded to crypt a server and everything worked. Tested the crypter with Dark Comet, Emissary, and Paradox with all crypted files working perfectly and no corruption! GOOD JOB BANKSY!

Update released.

Just fixed the icon changer and the issues some people were having with it.

It was due to the crypter using resource hacker to change the icon because of a detection that happened some time last year.

The detection is no longer an issue so resource hacker is no longer needed.

Still FUD:

Hey dude, I have seen your past threads and posts so I know you are extremely new here. Don't buy/download this because I reversed it and it has some pretty suspicious modules and classes

embedded within the program. It has to do with Cookies and stuff, one of the void names was "ClearCookies()" which I don't know if its even remotely suspicious or not.

Edit: How in hell did I not notice this before? The post dates are from 6 years ago! grxvity stop gravedigging!
