[img]http://imgbin.org/images/10680.PNG[/img]

What is a hacker.

Forms of hacking.

How to stay safe while hacking.

How to protect against hackers.

[img]http://imgbin.org/images/10681.png[/img]

White hat.

White hat ([Click to View](#))

A white hat hacker breaks security for non-malicious reasons, perhaps to test their own security system or while working for a security company which makes security software. The term "white hat" in Internet slang refers to an ethical hacker. This classification also includes individuals who perform penetration tests and vulnerability assessments within a contractual agreement. The EC-Council, also known as the International Council of Electronic Commerce Consultants, is one of those organisations that have developed certifications, courseware, classes, and online training covering the diverse arena of Ethical Hacking. - [Wikipedia](#)

Grey hat.

Grey hat ([Click to View](#))

A grey hat hacker is a combination of a Black Hat and a White Hat Hacker. A Grey Hat Hacker may surf the internet and hack into a computer system for the sole purpose of notifying the administrator that their system has been hacked, for example. Then they may offer to repair their system for a small fee. - [Wikipedia](#)

Black hat.

Black hat ([Click to View](#))

A "black hat" hacker is a hacker who "violates computer security for little reason beyond maliciousness or for personal gain". Black hat hackers form the stereotypical, illegal hacking groups often portrayed in popular culture, and are "the epitome of all that the public fears in a computer criminal". Black hat hackers break into secure networks to destroy data or make the network unusable for those who are authorized to use the network. They choose their targets using a two-pronged process known as the "pre-hacking stage". - [Wikipedia](#)

The Hacker Manifesto ([Click to View](#))

by

+++The Mentor+++

Written January 8, 1986

Another one got caught today, it's all over the papers. "Teenager Arrested in Computer Crime Scandal", "Hacker Arrested after Bank Tampering"...

Damn kids. They're all alike.

But did you, in your three-piece psychology and 1950's technobrain, ever take a look behind the eyes of the hacker? Did you ever wonder what made him tick, what forces shaped him, what may have molded him?

I am a hacker, enter my world...

Mine is a world that begins with school... I'm smarter than most of the other kids, this crap they teach us bores me...

Damn underachiever. They're all alike.

I'm in junior high or high school. I've listened to teachers explain for the fifteenth time how to reduce a fraction. I understand it. "No, Ms. Smith, I didn't show my work. I did it in my head..."

Damn kid. Probably copied it. They're all alike.

I made a discovery today. I found a computer. Wait a second, this is cool. It does what I want it to. If it makes a mistake, it's because I screwed it up. Not because it doesn't like me... Or feels threatened by me.. Or thinks I'm a smart ass.. Or doesn't like teaching and shouldn't be here...

Damn kid. All he does is play games. They're all alike.

And then it happened... a door opened to a world... rushing through the phone line like heroin through an addict's veins, an electronic pulse is sent out, a refuge from the day-to-day incompetencies is sought... a board is found. "This is it... this is where I belong..." I know everyone here... even if I've never met them, never talked to them, may never hear from them again... I know you all...

Damn kid. Tying up the phone line again. They're all alike...

You bet your ass we're all alike... we've been spoon-fed baby food at school when we hungered for steak... the bits of meat that you did let slip through were pre-chewed and tasteless. We've been dominated by sadists, or ignored by the apathetic. The few that had something to teach found us willing pupils, but those few are like drops of water in the desert.

This is our world now... the world of the electron and the switch, the beauty of the baud. We make use of a service already existing without paying for what could be dirt-cheap if it wasn't run by

profiteering gluttons, and you call us criminals. We explore... and you call us criminals. We seek after knowledge... and you call us criminals. We exist without skin color, without nationality, without religious bias... and you call us criminals. You build atomic bombs, you wage wars, you murder, cheat, and lie to us and try to make us believe it's for our own good, yet we're the criminals.

Yes, I am a criminal. My crime is that of curiosity. My crime is that of judging people by what they say and think, not what they look like. My crime is that of outsmarting you, something that you will never forgive me for.

I am a hacker, and this is my manifesto. You may stop this individual, but you can't stop us all... after all, we're all alike. - [The Hacker Manifesto](#)

Terry A. Davis - January 1, 2013, 12:11 am

[img]http://imgbin.org/images/10683.png[/img]

There are many types of hacking, I will try to cover all of the ones I know as well as some guides for them.

Remote Administration Tools.

What is a RAT? ([Click to View](#))

A remote administration tool (RAT) is a malware program that includes a back door for administrative control over the target computer. RATs are usually downloaded invisibly with a user-requested program -- such as a game -- or sent as an email attachment. Once the host system is compromised, the intruder may use it to distribute RATs to other vulnerable computers and establish a botnet. - [What is a RAT](#)

SQL Injection

What is SQL Injection? ([Click to View](#))

SQL injection is a technique often used to attack a website. This is done by including portions of SQL statements in a web form entry field in an attempt to get the website to pass a newly formed rogue SQL command to the database (e.g., dump the database contents to the attacker). SQL injection is a code injection technique that exploits a security vulnerability in a website's software. The vulnerability happens when user input is either incorrectly filtered for string literal escape characters embedded in SQL statements or user input is not strongly typed and unexpectedly executed. SQL commands are thus injected from the web form into the database of an application (like queries) to change the database content or dump the database information like credit card or passwords to the attacker. SQL injection is mostly known as an attack vector for websites but can be used to attack any type of SQL database. - [What is SQL Injection](#)

DNN

What is DNN? ([Click to View](#))

DotNetNuke is a web content management system based on Microsoft .NET. The Community Edition is open source.

DotNetNuke was written in VB.NET, though the developer has shifted to C# since version 6.0. It is distributed under both a Community Edition MIT license and commercial proprietary licenses as the

Professional and Enterprise Editions. - [What is DNN](#)

XSS Injection

What is XSS Injection? [\(Click to View\)](#)

Cross-site scripting (XSS) is a type of computer security vulnerability typically found in Web applications. Due to breaches of browser security, XSS enables attackers to inject client-side script into Web pages viewed by other users. A cross-site scripting vulnerability may be used by attackers to bypass access controls such as the same origin policy. Cross-site scripting carried out on websites accounted for roughly 84% of all security vulnerabilities documented by Symantec as of 2007. Their effect may range from a petty nuisance to a significant security risk, depending on the sensitivity of the data handled by the vulnerable site and the nature of any security mitigation implemented by the site's owner. - [What is XSS Injection](#)

RFI Injection

What is RFI Injection? [\(Click to View\)](#)

Remote File Inclusion (RFI) is a type of vulnerability most often found on websites. It allows an attacker to include a remote file, usually through a script on the web server. The vulnerability occurs due to the use of user-supplied input without proper validation. This can lead to something as minimal as outputting the contents of the file, but depending on the severity, to list a few it can lead to: Code execution on the web server

Code execution on the client-side such as JavaScript which can lead to other attacks such as cross site scripting (XSS).

Denial of Service (DoS)

Data Theft/Manipulation

- [What is RFI Injection](#)

LFI Injection

What is LFI Injection? [\(Click to View\)](#)

Local File Inclusion (also known as LFI) is the process of including files on a server through the web browser. This vulnerability occurs when a page include is not properly sanitized, and allows directory traversal characters to be injected.

[/list]- [What is LFI Injection](#)

How To Stay Safe While Hacking (sorry about the small image)

The most productive way to stay safe while hacking is simple, don't hack to start with. Another way to put this is, don't do the crime if you can't handle the crime.

The first most simple way would be to get a VPN

VPN ([Click to View](#))

[Cuber Ghost VPN](#)

[Proxpn](#)

[Nvpn](#)

Of course there are free ones, but most if not all of them keep logs so if you do something illegal it can be tracked back to you and cause you to be caught, if you get a paid one that doesn't keep logs it can be that much harder for people to track you down. There is also another program called [TOR](#) now there is a lot of suspicion going around that not all TOR nodes are "safe" this is true, some of them can be monitored by the FBI as if you want to look up some major illegal shit they might make it so you have to go through their node to get to that site, but other than know someone went to that site they have no way to trace it back though to you no matter what you have done. There are also other ways you can protect yourself when hacking like making a virtual machine like in VMWare or Virtual Box here are some setup guides for each of them; [VMware virtual box](#) This is a good way to protect your self since it would be easier to destroy a VM (virtual machine) than it is to destroy a normal machine since you would just need to run ccleaner's wipe free space in the VM since the hard-drive would be 5-10gb considering how many hacking tools you want on the VM [here is a ccleaner guide](#) one of the other ways you would protect your self from being caught would be to encrypt your hard-drive with truecrypt ([here](#)) since you can create a container to store all your hacks or encrypt your whole harddrive, this would be one of the best ways to make your self safe.

Now there isn't much I can teach about staying safe since you mostly learn from your mistakes but make sure you don't make any mistakes that will land you with the blackhat award and a nice cell in prison since we are all doing this to learn.

A few general hints would be;

- 1: Stay clear of .GOVT sites when hacking.
- 2: Don't go near school hacking.
- 3: Try not to hack someone that knows how to hack back.
- 4: Don't brag about hacking something or you will get caught faster.
- 5: Make sure you use some protection to stop you from getting caught.

Also some other general hints and stuff on VPN's and TOR.

Don't use your own wi-fi go to an internet cafe or something just act normal and do it, this further reduces the chance of them finding out it was you. Don't also go around saying your hacking alias is "Perfect Cell" then go hack a website and leave the message "Perfect Cell was here" since this would just be stupid and you would be tracked, fast.

Now on to the last half. How to protect against hackers.

Terry A. Davis - January 1, 2013, 12:13 am

[img]<http://imgbin.org/images/10948.png>[/img]

How To Protect Against Hackers.

I was talking to [Vandal](#) on Skype and his advice to protect against hackers is to hide in a bubble.. Dude, after a week of masturbating it would be like a snow globe. That is just gross..

But on topic to protect against hackers you will need to have a good firewall like Comodo, here is a very good guide by a friend of mine Skidzo [here](#).

With a good firewall you can look at all out going connections, so if you get ratted you can easily see the process name and the external address thus cutting it off by blocking it from accessing what it needs to access then from there you can remove it.

The best way to protect against hackers is to have a very good anti virus here are some good free ones

[MSE](#)

[AVG](#)

[Avast](#)

[Avira](#)

[MalwareBytes](#)

I like MSE since it small unnoticeable but yet has a pretty good detection rate since it is made by Microsoft so they know what is best for there OS. I use ESET the only draw back is it seems to take for ever to scan, I have never used AVG or Avast but I have heard they are great.

Another way to test for viruses it would be best to run a program in sandboxie [here](#) is a guide on how to set it up, this is one of the best ways unless the virus has anti-sandbox then you will need to run it in a VM. Sometimes crypters even come with anti-VM if it doesn't run in sandbox or VM Don't run it as it is most likely a virus.

Some general ways to stay safe are keep all your programs are updated so you have all the exploits patched, and if you are downloading some software make sure the MD5 is the same as the original one so you don't get infected by it this is the best way to test for viruses.

I think I should start to wind down now as this has taken me 7 hours to type so I am getting very tired. But before I do, I will say hackers are crafty people no matter what software you have protecting you, you can still be infected the only way to be %100 safe is to not connect to the internet.

? Thanks for reading.

Vandal - January 1, 2013, 12:15 am

Great guide as always PC, you know your shit and prove it once again :D

To be hacker which language is essential for me?

Terry A. Davis - January 5, 2013, 9:35 pm

(Jan 5, 2013 10:34 PM)kemronkelin Wrote: [\[CITE\]](#) To be hacker which language is essential for me?
VB.NET or C# I think so you can make .NET applications and see how tools are made.

FabuFotus - January 5, 2013, 9:37 pm

Thank you for this! I really apprieciate what you did!

Astor - January 6, 2013, 9:18 am

There are way too many of these guides, somebody just needs to make a really good one then sticky it.

Great guide though, Not bashing at all :P

daalor - January 14, 2013, 4:24 pm

Good thread answered some questions I had

Arbitrage - January 14, 2013, 4:31 pm

(Jan 5, 2013 10:34 PM)kemronkelin Wrote: [\[CITE\]](#) To be hacker which language is essential for me?
A hacker must know every language to be good.

procortex - January 14, 2013, 4:40 pm

thanks for efforts to club all this info together in one page!! i found some new and interesting things i didnt knew before. nice job!

(Jan 5, 2013 10:34 PM)kemronkelin Wrote: [\[CITE\]](#) To be hacker which language is essential for me?
simply learning languages doesnt make u a hacker, Curiosity is the first need! it gives u direction on what u should do next to achieve ur goal.

Terry A. Davis - January 15, 2013, 2:22 am

(Jan 14, 2013 05:31 PM)Senovit Wrote: [\[CITE\]](#) A hacker must know every language to be good.
Don't talk if you don't know what you're talking about, go on Learn ALL the programming languages
go on IT WOULD TAKE 20+ Years. Skid

Otherwise I hope people are still enjoying this guide.

ReaperVI - January 15, 2013, 8:13 am

hmm I guess id consider myself a black hat hacker or am trying to become one.

Nice thread!

SiiGMA - January 15, 2013, 8:20 am

Really nice thread OP, will be taking a long trawl through it!

Deep Web - January 15, 2013, 11:08 am

Thanks for the helpful info for the people that are starting out. :)

-Bourne - January 15, 2013, 11:28 am

Nice tutorial although it would of been much more appealing if you added more images.
Overall most information here is valid and a little tweaking in the grammar would make it look professional.

Thank you for contributing with a nicely done tutorial and I enjoyed reading.

denise29 - January 15, 2013, 2:21 pm

(Jan 17, 2013 12:17 AM)DARK_HORSE Wrote: [\[CITE\]](#) Great thread and compilation ...thanx
Thanks for the feedback me and Rage are getting together on making another one.

froze852 - January 26, 2013, 5:06 pm

Thanks for this guide, helped since im just starting to learn all of this :D

M0rt3m - January 27, 2013, 6:04 pm

Hey i have a VPN i have cyber ghost and i cant get to this website when i have it on is there a better VPN that will let me get on here ?

Josh4352 - January 27, 2013, 6:25 pm

Thanks for posting this i learned a lot

kyro - January 27, 2013, 6:36 pm

Nice. Very informative and thank you for sharing :D

Vile Soul - January 27, 2013, 6:39 pm

no offence but Wikipedia is not much of a valid source for info.(that being said i use it all the time)
but i like your thread it is helpful for new members who don't know what to do.

Baller34 - January 27, 2013, 9:19 pm

Really well done. What type of hacking/tool is used to hack into accounts for something harmless, lets say a computer game account?

DarkComet™ - January 27, 2013, 9:21 pm

Great guide you got here OP, this is for sure a "mega thread"

:D

d4rkj4y - January 27, 2013, 9:24 pm

What..?

You know no-one on here hacks, their idea of hacking is installing a .NET RAT (not made by them) via a .NET crypter (not made by them) to steal Runescape virtual points.

You can't deny it, that is THE hardest shit that goes down on Hackforums.net

Terry A. Davis - January 29, 2013, 5:22 pm

(Jan 27, 2013 10:24 PM)d4rkj4y Wrote: [\[CITE\]](#) What..?

Wrong not Runescape, it is Facebook accounts of their "friends"

But thanks for the feedback once again.

Austerity - January 29, 2013, 5:27 pm

Very nice guide, I found it very helpful. Also I like your hat hackers, definitions.

Herp_Derp21 - January 31, 2013, 7:12 am

i actually never heard of those terms haha. Good thing i came across this post so i dont sound too much like a newb

christiaanb - January 31, 2013, 7:22 am

Thanks, Youre great! :) Great job, thanksss.

WinfieldBlue - January 31, 2013, 11:25 am

I enjoyed reading this, top quality thread. In regards to he whole Hacker Manifesto. There's not one precise mind set that makes a hacker tick. Me for example, I look at it as I am a glorious teacher by infecting different people and tampering with them, this will lead them into curiosity, curiosity will lead them to glory. That's my philosophy, but many people hack for different reasons, like you said, Knowledge or it could be they need bills to be paid just like somebody who sells crack for a living.

There's no sure-fire way of understanding someones purpose of hacking.

Anyway top thread 10.10

aiDD - January 31, 2013, 11:27 am

Thenks for everything man

Now im learn all of this thing who you writee :)

CatchMelfYouCan - January 31, 2013, 11:29 am

Nice copy & paste from WIKIlepidia...

"Hello, Welcome to the World of Hacking! You can find everything you need to learn by going on Google.com"

kepa50 - January 31, 2013, 3:57 pm

Hey percert cell, you have take a lot of misundersting away from me because I was confuse when it comes to hacking. I would like to ask you for some advice. They have a phone company that give access to a website so they can log into with there ussername and password. What would you do to get these people username and password? Thats all am asking.

Terry A. Davis - January 31, 2013, 6:14 pm

CatchMelfYouCan Wrote:Nice copy & paste from WIKIlepidia...

Thats all am asking.You would have to RAT people on the same plan and such.

Xcz - January 31, 2013, 6:47 pm

Amazing guide, 10/10. Has a lot of knowledge in it, very interesting to read.

Terry A. Davis - January 31, 2013, 8:35 pm

Cake17 Wrote:Amazing guide, 10/10. Has a lot of knowledge in it, very interesting to read.
Thank you for the feedback.

~Chocolate Milk!

ksawaya1021 - January 31, 2013, 8:56 pm

Pretty great thread man, keep up the good work!!

AnonymousVeXtor - January 31, 2013, 9:04 pm

Now this is a guy who knows his shit!

Thank you!

Terry A. Davis - January 31, 2013, 10:15 pm

Thank for the replies does anyone have any ideas for other threads?
~Chocolate Milk!

lovesick123 - February 1, 2013, 3:02 am

I'm new to hacking. This post definitely helps me understand a lot. Thank you! Keep up the good work :) I would like to see more of this :)

itsprime - February 2, 2013, 12:31 am

Well this is a good post im gonna try to use the Comodo Firewall :P, and thanks again for sharing this.

Superkawaii - February 2, 2013, 12:48 am

awesome thread bro with a lot of useful links

Mod Jacmob - February 2, 2013, 1:34 am

Very helpful thread for a hacking newb like myself :p

SauceJohnson - February 2, 2013, 1:35 am

I'm just curious, how many posts like this are we going to get?

The Anonymous - February 2, 2013, 1:38 am

best post about hacking ever, thanks mate

Reverse Engineer. - February 2, 2013, 4:01 am

This is a great thread I will link newcomers to this thread from now on.

Acivetix - February 2, 2013, 4:47 am

Epic thread, a very good explanation for absolute beginners. Keep up the good work!

wenotsped - February 3, 2013, 10:03 pm

ing to keep this in my post history, really helped me get into RAtIng. Thanks! <3

sam.lit11 - February 4, 2013, 11:16 am

Thank you,very much friend.

I am new and it really helped me.

nottiehaojie - February 4, 2013, 12:24 pm

Thank you ! this has been very helpful !! Very detailed !

Th3PonyWizard - February 4, 2013, 2:30 pm

Those are no forms of hacking, those are simply specific methods to do one thing or another. There is some informative stuff on this thread, but nothing I'd recommend starting from.

boa134 - February 4, 2013, 4:00 pm

Wow thank you so much im learning a ton of stuff from this thread!

Reckyy - February 4, 2013, 5:15 pm

Thankyou. Will also help a lot of people.

TayterJ - February 4, 2013, 7:07 pm

Wow. This is cool. I know pretty much nothing about hacking, but I am really curious, and this will be a big help. Thanks a ton.

aciid.w0rm - February 4, 2013, 11:30 pm

Thanks for this information,Perfect Cell!

Keep on...nice share.?

Terry A. Davis - February 4, 2013, 11:36 pm

Thanks for the feedback everyone, as soon as my warning expires I am releasing one for Legion

dakhacker - February 5, 2013, 3:08 am

Thank u man i like and it helped me alot!!

TheBlackWalker - February 5, 2013, 2:01 pm

Oh my god, you answered so many of my questions. I'm bookmarking this thread! Great job!

4554551N 5NIP3R - February 5, 2013, 2:49 pm

I am gonna review this and try to learn something. Cant stop learning unless your dead, lol.

Zendemic - February 5, 2013, 6:13 pm

Thanks for this :D. I'm using CG ([censored]) and HotSpotShield VPNs. Also AVG. Thanks for the links aswell.

Ewbuntu - February 5, 2013, 6:37 pm

I turned soooo hipster because I was like "I read this before it was stickied."

LOL, Good thread.

zRandom - February 5, 2013, 6:38 pm

Great guide as always PC, you know your shit and prove it once again :D

redlegsboss - February 5, 2013, 7:10 pm

you really put some effort in this i like that,thanks for the help

Dragonchina - February 5, 2013, 11:49 pm

Thanks for the links aswell, i like that.

?A.J? - February 6, 2013, 12:36 am

Great thread dude! Very informative!
Bookmarking this!

Terry A. Davis - February 6, 2013, 3:15 am

Thanks for the feedback guys just waiting on a reply from a friend before I release my next one.

bharathhacker - February 9, 2013, 7:08 am

Thank you very Much ?. This Helped Me a Lot as a Begginer ! :* Love you <3 ? ?

Terry A. Davis - February 9, 2013, 10:27 pm

<https://hackforums.net/showthread.php?tid=3236662>

A simple remake right there.

SxO. - February 10, 2013, 5:19 am

Nice one .. @Perfect Cell ! GJ .

Steakknife - February 17, 2013, 8:07 am

Nice thread, Has helped me understand some of the basics. Amazing when you stumble across a brand new world and it all just appeals to you. The Hacker Manifesto sent shivers down my spine. Amazing work :)

-SK

4RG0S - February 17, 2013, 10:24 am

Amazing Thread, but an important thing, i think you did not mentioned, is that you need a Brain and common sense, too. :)

Terry A. Davis - February 17, 2013, 10:49 pm

Thanks for the replies check a few posts above to see updated

rkbHD - February 27, 2013, 6:42 am

Now this is a great simple guide, keep it up.

mike4898 - February 27, 2013, 8:46 am

Great thread, thanks for all the information!

hydromike - February 27, 2013, 11:22 am

Thanks learning new things are always good

???n - February 27, 2013, 11:23 am

A skid teaching us how to hack. You're not a hacker bro.

TheUzuki.' - February 27, 2013, 11:33 am

(Feb 27, 2013 12:23 PM)???n Wrote: [\[CITE\]](#) A skid teaching us how to hack. You're not a hacker bro.

This is absolutely my opinion.

This is actually NOT how you really learn to Hack.

I would call you .. Script Kiddie I think.

Sorry. But someone who releases such a threat has to deal with negative feedback.

Terry A. Davis - February 27, 2013, 6:28 pm

(Feb 27, 2013 12:33 PM)TheUzuki. Wrote: [CITE](#) This is absolutely my opinion.

He's Mr Asshole let him flame me and him are /b/ros.

So fuck you to Pain fuck you to

PepsimaxL - February 28, 2013, 12:47 pm

i feel noob by asking this questin. but how to i infect people ? like where is the file i give them :P
Btw good Tut

McLovinBB - March 1, 2013, 6:30 am

Very helpful thanks. Explained a few things that I didnt grasp.

Silvertwist - May 15, 2013, 8:35 am

Very helpful, cheers mate! Will hopefully be putting this into good use

muzzy. - May 28, 2013, 7:10 am

Such a good guide, real shame this was buried. Maybe some will read this now?

rehab101 - May 28, 2013, 11:27 am

This is a very HQ thread. If you can, please add this website: <http://threatexpert.com>. You can upload suspicious files and they will run the file on a virtual machines and give you a report. Way better than AV's considering they can be bypassed using FUD crypters.

AlexCorb - May 28, 2013, 1:50 pm

Incredibly accurate descriptions of everything, best guide/tutorial i've read this far. i'll give it 9/10 !
Keep up the good work and yea .. THANKS!

Terry A. Davis - June 10, 2013, 2:45 am

Thanks for all the support guys I love it.

chumbuck3t - June 10, 2013, 4:36 am

Really good thread for introduction and reference.

chickenmasterZ - June 10, 2013, 6:41 am

I'll probably read over this when I got time, looks good! :D

jake1218 - June 11, 2013, 1:19 pm

I was talking to [Vandal](#) on Skype and his advice to protect against hackers is to hide in a bubble..
Dude, after a week of masturbating it would be like a snow globe. That is just gross..

Terry A. Davis - June 11, 2013, 2:01 pm

jake1218 Wrote:I was talking to Vandal on Skype and his advice to protect against hackers is to hide in a bubble..
