Thread: [\[Question\] Mybb rip?](#)

Breakbeat Junkie - December 13, 2012, 8:14 am

Hello.

I would like to know how to rip a theme from a MyBB forum and get the .xml for it. I know how to rip everything BUT the .xml.

Anyone got any knowledge on that topic?

I'd be able to pay if you teach me how to do it, depending on the success rate and such.
And no, I won't be ripping HF, lol.

There's a guide on the internet, I've seen it before.

Jesse Pinkman - December 13, 2012, 8:22 am

I can help you, I'll rip any forum's skin that you need. I know that I'm new here, but I could do it for you if you want.

Well actually link him to the guide rather than pointing to the distance and not giving any help what so ever.

Giving - December 13, 2012, 8:43 am

Code 1) Choose a Mybb Forum Theme

2) Right Click and select "View Page Source"

3) Press CTRL+F and search for ".css"

4) You will be shown a global.css file link.

5) Select and Open it,

6) Copy the entire code into a notepad.

7) In some lines you will see something like

Code:

(.../images/theme/header.png)

8) Just replace those dots with the website URL for which u are ripping.

9) Do this for all the lines that contains dots.

10) Done!!

You have finished the ripping. Theme is ready.

Now Go to your

Code:

ADMINCP>CREATE A THEME > GIVE SOME NAME > GLOBAL.CSS

> ADVANCED MODE >

11) Copy and Paste the code here and save it .Set it Default.Done !!!

Jae? - December 13, 2012, 8:46 am

He asked for a tutorial on how to gain the .xml file, not the .css files.

What the earlier guy posted would generate the xml file, although in a rather hilarious way as all the content would be hosted on the server which you are ripping the theme from.

Nope.

The .xml contains all the templates as well, the global.css doesn't.
