Thread: [Skype API Groups.](#)

Golzer - December 15, 2012, 8:14 am

So I making a skype program but I already make a option to choose somebody in skype and its show who active like this.

And I can only send message to people and not to groups so how can I make a active groups. this is my code for active user so I able to write message only to user and not for groups and I want to be able to write message from my program to groups. this is my code
Please help me with that.

My mind just exploded trying to read this. Please make proper sentences or else pretty much nobody will understand what the question is..

?Reath - December 15, 2012, 11:46 am

If he clicks on a contact in his Skype the program checks that and makes "ActiveUser.Text" to the selected contact, but when he selects a group (Like "Ivan :), Shanar, Ofir") the function doesn't work. I, that english isn't my native language could understand it.

Temploit - December 15, 2012, 12:17 pm

As far as I found you cannot show the selected contacts if you select more than one. The FocusedContacts.Count becomes 0 when you select multiple. May I ask why you need the focused contact(s)?
