Are you trying to just send mail, or brute force SMTP?

MajinVegeta - December 18, 2012, 11:52 am

Use Dubrute for RDP Cracking

search a tutorial for it. RDP Scanning are many ways...i use nmap.

Well, the SET Toolkit with the "Mass Mailer Attack" on BT5 is what you need it seems..

Can you help me with this and explain everything about it to me? Would all email messages sent through this be delivery to every email inbox?

Well for one you need Backtrack 5.

Once you've logged in to the desktop, open the terminal and run these commands...

```
cd ..  
cd /pentest/exploits/set  
./set
```

.. then just follow the instructions from the link I've given. They're self explanatory. You can send it to one email address, many random ones, or one from a list you've made. You can attach a RAT to your email, custom the email to however you want. Just mess around with it, explore and learn, that's the fun part.
