Thread: [Asylum Stresser XSS Vulnerabilities](#)

~Tom~ - December 19, 2012, 5:42 am

I would just like to warn everyone that recently I have noticed after viewing [This thread](#) I have noticed that there are indeed a lot of vulnerabilities.

This may be alerting for some of Asylum stresser users so I wanted to warn everyone. It's a common xss.

Number 1 (Credits to ?DarkZealot)

Spoiler [\(Click to View\)](#)

Number 2

Spoiler [\(Click to View\)](#)

Number 3

Spoiler [\(Click to View\)](#)

I don't want hate or anything I'm just pointing it out and I'm sure the owner will fix it asap.

+Awesome - December 19, 2012, 5:45 am

Your first image tag isn't closed well.

LevelUp - December 19, 2012, 5:47 am

Thanks for bringing this to the community.

Don't forget to mention that Number 1 is persistant.

I've already contacted Asylum with fixing the persistant one I've found.

Yeah I doubt it but he should still get it fixed quickly.

Mr.Cube - December 19, 2012, 9:10 am

All these booters with vulnerabilities on them. I bet there's a ton out there on others.

J?ck - December 19, 2012, 9:13 am

Nice find, off topic: the first pictures Firefox theme is disgusting.

I'm sorry but red lightning has never attracted me.

CarrotMilk - December 19, 2012, 12:34 pm

Yay for making a thread about a totally harmless XSS exploit.

You're and idiot.

Harmless XSS? ?

If someone wanted to fully exploit this, all they'd have to do is send Asylum a PM with some bullshit and a hexed link. It would steal his cookie and then it can be hijacked via Tamper Data....

I'm not "and idiot"

Based on the screenshots given above, the exploits are completely on the user's side. No one, other than the user account that exploits, is going to be affected by this.

Assuming he's only using cookies to identify users.

I see no point in this thread, how about you silently message the owner and have him fix it? Simple as that, nobody thinks any of you are hot shit for finding some stupid XSS vulnerability that any 5th grader can do with some Googled cheat sheet.

I found the persistant XSS, and I'm not the one who made the thread.

Also I did message the owner, who didn't know how to fix it, nor what XSS even is.
