It seems safe.

The only weird thing I found was...

Code Imports System

Namespace Ultimate_Downloader

Friend Enum MouseState As Byte

None

Over

Down

Block

End Enum

End NamespaceNot exactly sure what that does.

I don't understand but it doesn't work. Lol

hkiller1 - December 24, 2012, 9:27 am

how do you get this to work, it only outputs the website code not the download

lev02333 - December 28, 2012, 9:55 am

I think it's a virus and I just got infected. It gave me an error when I clicked download then some CMD's appeared and now I can't delete it it says "cannot delete ultimate downloader.exe because it's opened in ultimate downloader"
