Thread: [\[In Progress\] How to change Admin password at School\[/in Progress\]](#)

Larrdawg - December 22, 2012, 7:44 am

My very first Tutorial, so don't expect anything very great.

Note: I haven't yet tried this method at school yet, as i have School holidays. And BIOS is probably disabled in many schools. I have tried it on my own computer and it worked.

NOTE 2: Sorry for the bad english, english is not my first language.

1. Shut down the computer completely
2. When starting up press the F2 key repeatedly as it starts up.
3. You should hopefully be met with a screen like this, or atleast something like this.
[img]http://www.mydigitallife.info/wp-content/uploads/2009/05/virtual-pc-bios.jpg[/img]
4. Use the arrow keys to scroll right and stop when you hit the security tab.
5. Go to The admin password section.
[img]http://www.passwordunlocker.com/images/knowledge/bios-password-04.jpg[/img]
6. Press enter
7. Type in the new password
8. Press esc and choose "Save And Exit"
9. Wait for the computer to boot up
10. Type in the admin account name and password.
11. Voila! You have admin access. Remember to use this discreetly, as the tech team can see the new accounts, and password changes. And DO NOT go off bragging to someone about this, as you could end up in big trouble.

That's all for now. Please post feedback?

Marshall Mathers - December 22, 2012, 7:46 am

Nice TUT!

but not going to try this :P

ophelimity - December 22, 2012, 7:57 am

Damn, I have no idea what would happen to me if I got caught doing this.

thanks anyway i've always wanted to do it =D

d4rk41g0r1thm - December 22, 2012, 8:11 am

Old method but thanks anyway for sharing :)

nibbles - December 22, 2012, 8:14 am

Wouldn't this only change the computers bios password, correct me if i'm wrong :P

I thought a good place to look would be in the SAM files of most windows computers

Larrdawg - December 23, 2012, 5:43 am

Nibbles, you are probably right. Again, i haven't tried it at school. So it could do anything

CurtisB - December 23, 2012, 5:16 pm

Nice idea, but it does not work. That's only changing the computers bios password, it's pretty much

useless.

Larrdawg - December 24, 2012, 3:54 am

^ Ok thanks for confirming it, i will still leave it here. In case someone wants to change the BIOS password, which i doubt someone would want to do, but you never know. Thanks for pointing it out.

The Sailor ? - December 25, 2012, 4:07 pm

This doesn't work on windows 8..

Because the new login system on Windows 8 requires an Hotmail.com account [live]

And i'm pretty sure that you can't change your live account's password via these settings..

But I have to try this on my school pc's WIN7 and XP :D

Xylon - December 25, 2012, 4:08 pm

This does change the bios password not the windows passowrd.

Swiergi - December 25, 2012, 4:34 pm

lol i did something like this last year. got in school suspension for 2 days for using net user administrator *

for password rest lol. then later i just created a new user and gave it network admin authority and didnt get caught ;)

Exactly.

This wont effect windows at all, it only effects the computers booting.

Now it will ask for a password at boot that only you know.

This pretty much fucks the whole thing, my friend did this and the techs at our school couldn't remove it and he got suspended.

Bad idea bro. ?

Endonium - January 4, 2013, 6:41 am

100% useless tutorial.

In every possible way.

Get out of here.

Deadrose2 - January 4, 2013, 6:49 am

nice! waiting for it! ;) haha! :D i will send you apm

Ivr Niz - January 5, 2013, 11:28 am

Getting post count? right?

Don't you read the other comments?

It won't give you administrator password.

TheVBNetwork - January 5, 2013, 2:12 pm

Bio screens are password protected at mine, already tried booting Linux on one :(

LemonParties - January 5, 2013, 2:34 pm

good idea, but most computers have a bios password
