Thread: [\[Web Hacking\] \[Bypassing php Myadmin panel\] Full Control](#)

hackermate97 - December 22, 2012, 8:00 am

Hey guys, i Just found a google dork which will let you access the php Myadmin panel of the website without any kind of password cracking process.

Go to google.com and enter this dOrk, google will show you About 131,000 results
:) guess how many website are vuln fOr this attack !

I also created some myself, seems to be working.

This dork bypasses the admin username and pass and takes You directly to information schema tables to get data and You can delete data!!!!

Proof:

Just POST here and i will PM you the link. Don't PM me.

???

I also offer crypting services and ddos botnet kits.(Dirt Jumper V5, Optima 10a...etc)
Contact me at hackermate97@gmail.com You will get a 100% FUD runtime crypter with the purchase of ddos botnet kits.

Green Arrow - December 22, 2012, 8:01 am

Wouldn't mind giving it a go, hit me up with a PM.

?Hycca - December 22, 2012, 8:02 am

You are a fucking idiot. This dork is public and has been whored out by skids.

Phizo - December 22, 2012, 8:05 am

This is ancient. It's not even worth mentioning.

Zixem - December 22, 2012, 8:07 am

Code `allinurl:index.php?db=information_schema` so pru.

millkiller - December 22, 2012, 8:14 am

hahaahh this user made me laugh i swear. nice try anyway :)

Facebook Famous - December 22, 2012, 4:57 pm

I'm interested in this! please PM me

hackermate97 - December 22, 2012, 8:55 pm

Well, it works now also..so just chill...

xZero707 - December 23, 2012, 8:00 am

This would not work. Forgot it. You made me laugh.

You can't access any part of phpmyadmin without proper login. When you login, phpmyadmin sets an cookie and hash which will be used to authenticate you as logged user. If you don't login - No authentication cookie and hash = No access

So as we said forgot it. Don't waste yours and our time.

tdenkrew - December 23, 2012, 8:48 am

Hello dude,

Can you PM me the dorks. It's pretty cool.

Thanks in advance.

V1P3R - December 24, 2012, 2:32 am

i need this method :)

thanks alot wiating for your pm

Oxy - December 24, 2012, 3:07 am

Can i have this? PHPMyadmin is full controll of database.

That would allow you to add accounts and more. anything you want in there database.

Vouch if this works!!

Greetings InQontroll.

vigu - December 24, 2012, 3:26 am

I need this method! :)

thanks in advance..

XxGreenLanternxX - December 25, 2012, 7:37 am

Can i please have this??

Thank you.

Oxy - December 26, 2012, 2:46 am

Don't flame him for trying to share something. Nice share mate!

Even though it has been found and shared before even unuseable, we are glad you tried!
Go over to the hacking tutorial section and you will start learning a lot about these things.
Everyone makes mistakes for the flammers be happy he wants to share something!

Greetings InQontroll.

I would like this dork. Thank you .

Spotter-HF - December 28, 2012, 2:57 pm

am i wrong in saying that its this?
Code allinurl:index.php?db=information_schema
a lot of the sites that dork brings up now look like this

<http://diwas.co.uk/>

*****Wolf***** - December 30, 2012, 5:10 am

allinurl:index.php?db=information_schema??

Son_Of_Diablo - December 30, 2012, 5:30 am

please send this thanks in advance
have a good day

DARPA - January 26, 2013, 1:39 pm

Dude that would be awesome, if it actually works, please enlighten me ?

Beladonis - January 26, 2013, 2:59 pm

This works for unprotected databases, and It's old. Most of databases are hacked (retarded skids made a table called "hacked" or "c99")... however, there are still few db on the lasts pages that are not yet hacked/fucked, so..

axdn94 - January 26, 2013, 7:30 pm

PM me with the link please. Would love to take a look

sqletor - January 26, 2013, 10:24 pm

This works because they put a username/pw in the configuration file(bad idea) lol
Anyways..
Get working path from phpinfo.
Write code to a table.
Write the table to a file.php
Super easy web shell.

Hey, could I have this?
It seems like it'd come in handy.

Szakalaka - January 30, 2013, 8:07 am

Its a simple dork. It will grant access to some random databases - not targeted ones
