Thread: [\[Tut\] How to put links+Flashing text in skype\[/Tut\]](#)

Larrdawg - December 25, 2012, 6:47 pm

Errmm, this is my second tutorial. So don't expect top notch HQ tutorial. But i will try my best and put as much effort in as i can. Anyways Here is the tutorial.

I don't know if this is the right place to post it or not, i have posted it here as it is hacking because it is something the owner didn't intend to happen.?

CONSTRUCTIVE criticism please!?

1.}To start off with go to this link, and download the file, install it and run it. It is skype approved, so do not worry about viruses.

[Adfly link*Direct*](#)

2.}Open it up and then go on skype, and click ok if it asks to approve rich mood editor for skype.

3.}Write your text normally.

4.}Edit it as you want, blink is for the text to blink, you can color it and center it and do the usual things.

5.} When you are done, just click the skype button with the red arrow on, and it will set it as your status

Thats all for now. Sorry for the poor quality, but this tutorial was written at 4 in the night. Hopy you enjoy

Thanks for this, lots of people would like this ;D

Appreciate you leaving the link as well.

Merry Christmas.
