Its interesting all though the cutout of your leg could be better. It looks rough around the edges.

Based God Tyrone - December 26, 2012, 4:40 am

I agree with Retorix and maybe take it with a better quality camera.
Also try to feather the leg a little so it isn't so sharp.

"feather the leg so it isnt so sharp" ?

The leg is in movement so its already blurred, i think you ment the opposite.

@op Scale down your photos so it wont be as noisy, and stop messing around with too much effects, most of the time they bring down the contrast and over all quality of the photo.

It wasn't in motion when I saw it, OP must have updated the image.
