Hey guys i just wanted to let all of you know (customers of DP v2) that i added injection persistence, so from now on you will have zero reasons to come and tell me you lost one slave. :)
So now you have:

1. File persistence.
2. Registry persistence.
3. Injection persistence.

How does it work?

Please read the review ([Click to View](#)) (Mar 31, 2013 10:06 PM)Rod Serling Wrote: [\[CITE\]](#) Review of ?DataProtector?

Summary: ?DataProtector? is a FUD Crypter by the HF member n0\$f3ratu\$, it is one of the very known to be high quality crypters on HF.

Payment Methods: Accepts Paypal, Liberty Reserve, and Western Union

The Prices are followed

\$29.50 - 45 Days LR/PP

\$47.50 - 90 Days LR/PP

\$70.50 - 180 Days LR/PP

TOS: No Crypting Service, No Using Scanners that distribute samples.

Rating: ?????????? 10/10 - The TOS is easy to agree to, and is displayed publicly for all to see before getting the product.

Graphics and Application Usability: The application is very nice looking, what makes it unique among other applications is that it is a custom source, unlike Public crypters, this is nicely designed. It looks like it took lots of time to create, which is highly believable.

Rating: ?????????? 10/10 Stars

Crypter Power and Updates: This crypter, is not only uniquely designed, but it simply crypts anything you throw at it 0/35 over 90% of the time! Updates are very frequent, which is really good as well, since you never have to worry about a UD rate. The Power lasts long, files stay FUD up to 2 weeks or more! As long as you upload files to a proper Direct download site like ge.tt and you will be fine.

Rating: ?????????? 11/10 Stars (Note: This gets an extra star, because the crypter is the most unique. Never have I purchased a crypter as good as Data Protector, I have been satisfied since I bought it, and am planning on buying it in the future)

Customer Care and Support Attitude: People have said that n0\$f3ratu\$ is a mean member, not at all is that true, n0\$f3ratu\$ is a really helpful member when you ask for Valid support questions, If I were him, I wouldn't play around either, if a member waste's my time with a stupid googleable question. n0\$f3ratu\$ will answer all your support questions within 24 hours. If he doesn't then he is busy, after all, he has a LIFE. People, you need to learn to have respect when someone is busy, Family and Life comes first before anything! You are lucky n0\$f3ratu\$ takes his time to get on HF to answer any questions you might have.

Rating: ?????????? 10/10

Conclusion of this Review: This crypter is one of a kind, before anyone buys any crypter, try Data Protector, I guarantee you will never look for another crypter again! You will be satisfied! I vouch for n0\$f3ratu\$ and his amazing product.

Overall Rating: ??????????| 10.5/10 Stars

P.S.: Current customers of Data Protector, do not upload files on Dropbox, Mediafire, or any file distributing site. What this does is the people/staff/bots will give the files to virus protector people that will analyze the crypted file and update the Virus Protection's database rendering the file Detectable!

I have so much respect for you as a business man n0\$f3ratu\$ and I can assure any potential customers of yours that they'll be in good hands. Nos goes out of his way to add features to this product, keep it undetected, and to provide support. If I ever needed a crypter, this one would be my first choice.

kessix - December 28, 2012, 5:56 pm

Hi,

I bought the crypter over a half year ago.

I use it not a long time.

After 3 months of non-use I need the crypter again.

Unfortunately I made a configuration error. The Crypter was broken. I recognized the problem himself.

I got in touch with n0 f3ratu \$ \$.

It took an Stude and \$ n0 \$ f3ratu solved the problem via team viewer.

It was my fault, I overlooked something. It was not his job to solve this problem. He did it anyway.

The customer service is great, something I've experienced with any other product.

I am also a customer of another Crypter and keyloggers. But such a great customer service I never expected nor thought possible. A big thanks!

In addition, this crypt is almost always undetect. Once just a virus scanner detected the Crypter comes a few hours later an instant update!

Something I have never seen in any other crypter/keylogger/rat.

Even the crypter is very stable! All the functions of this Crypter offers work!

I've found for me a great crypter and is: Data Protector.

I will renew my license again in any case and can only advise everyone to buy this crypter also.

I also hope that there simply are soon more of these coders. This is how the purchase and use of the programs fun again.

Best regards

Still the best Crypter around ?

Got many users but still FUD for a weeks or more ?

Also the E-book is so perfect for a noob like me ?

The Zodiac. - December 29, 2012, 9:41 pm

I can say I 10000% vouch for this awesome product. Got this beast crypter working! I love it, nice and easy and I also love the online scanner. Also the transaction was nice and smooth.

Still gotta test this out on some slaves though, gunna go have some fun now!

MaxBat - December 30, 2012, 4:44 am

Hello to all. Being a customer for 3 months I must say this crypter is really great. It is always FUD and most important it is runtime FUD also. Nosferatus is personally checking it on most of AVs. I even succeeded to crypt my keyloggers using this crypter. Had a good time with it. Helped me a lot. Thinking of buying 1 year license.

I shall buy this tomorrow. i know you say no crypting services, does that include crypting a friend's
RAT who will 100% guaranteed never scan it with something that distributes samples.

obviously, if you say that wouldn't be ok, i'd never do it.

I must admit. Very very good crypter.

Do something wrong though and your license will be terminated by nos the boss.

Also watch out for someone called YAHOO he is a experienced grammar nazi and is a hired hitman from nos himself. Don't follow his rules and he will also get your license terminated.

(Past experience I have had. Got my license removed in one day, I also know a few others who have had the exact same problem. If you get your license removed don't expect a full refund, think about other options, such as disputing or contacting PP.)

I have a question as well. With previous paid crypters ive used, the crypted servers have been getting picked up by google chrome as "malicious" which is putting a serious dent into the amount of victims im getting. Does DataProtector have the problem as well??

I'm testing this wonderful crypter with Cybergate aswell since it's working great with DC, a question: are you guys having problems with dataprotector startup using cybegate? I followed n0\$ instructions on how to setup cyb with DP and it's working, but once my slave restart his machine, I'm losing him

(but I'm sure I checked add to startup inside dataprotector). what could it be the problem? ?

I don't have any problems with the start-up function on DataProtector, not with Cybergate or Darkcomet.

Are you sure you only are using the start-up in DP?

If you also add the start-up in CG, the server can get corrupted.

This crypter have a huge problem. When you send the crypted file to a slave over skype or anything as a binded file or spoofed as a jpg or mp3 or whatever.. and the slave clicked on it to open it. This Window will show up [img]<http://www9.0zz0.com/2013/01/12/18/638987197.png>[/img]

obviously everyone will choose cancel + it's so suspicious!!! No one will choose Run!!!! so basically this is a big fucking problem and I did crypt a spynet server and upload it on a DC slaves so I can approve that. and yes all of them showed this window. I used another crypters to see if the problem is from my server and I did run the crypted file and no Window pops up. so yes the problem is from the crypter.

and I didn't post here at first and I did PM the OP cuz he always says don't post problems in the thread.

So I did what he asked for and When I PMd him he said "learn how to spread" and he gave me -3 rep.

All I did is upload a crypted spynet server using dataprotector to a DC slaves to see if the window shows up to all of them or must of them.. and it did.

I asked him is it something I have to choose like an option in the crypter causes this problem or the problem from the crypter? so he can fix it.

and he -3 reped me!!

So if we post in the thread about a problem we have!! you go banning us!! and saying pm me if you have any problem, and when we go and pm you about a problem you go and -3 rep us?

Like I said I did send it through skype not a browser and I did upload it on some of the DC slaves pc's I have to test it and execute it via file manager. and the window did pop up. (watching their desktop)

I have tested it myself and never had this issue when I was still using DP. And I think it only happens when the exe is downloaded from the internet with internet explore. This isn't the fault of DP. Also, I'm pretty sure there is no crypter bypassing this.

We're not talking about Downloading the exe and saving or run it!!
We are talking about security warning box (after running the exe).
Read what the OP says Quote:3. That windows will appear only one time and never after.

Quote:The security warning box will run only once.

so We are not talking about if you have it or Not! The coder him self says yes it does appear for 1 time. And you're not better than the coder to tell if a problem does exist or not. So we all know that it does appear.

I'm talking about why we can't post a problem in the thread! and when we Follow the rules and PM him about a problem we get a -3 rep? is it because I'm not a l33t or ub3r and I can't rep him back.. is that a way to treat your customers?

When a file is crypted and downloaded trough browser it will request permission to run (that pop-up box) every time.
So every time you will try to run it or if you added that file to startup, after each restart it will ask for permission to run.

When i said only few crypter's can bypass it i meant the file will ask for permission at least once before disabling the Zone Identifier.
NOBODY can disable the security box without running the file at least once except maybe if they have some exploits but i highly doubt.

So you better stop talking out of your big fat lousy ass and learn more before talking to grownups.

So every time you will try to run it or if you added that file to startup, after each restart it will ask for permission to run.

When i said only few crypter's can bypass it i meant the file will ask for permission at least once before disabling the Zone Identifier.

NOBODY can disable the security box without running the file at least once except maybe if they have some exploits but i highly doubt.

I stopped doing it when you start raging without knowing anything.

I don't know your age and i really don't care, but you have a lot to learn.

Next time before raging at people without no reason ask others or search on google.

That being said, stop here.

You already wasted enough space in my thread.

EDIT: Start learning how to spread.

Stop raging at people like Nieeli who actually knows how to spread and keep the file FUD.

spreading or FUD Doesn't have anything to do with the fact that when the slave click on it. it shows the security box!

my server is FUD and the slaves didn't download the server from the browser! I said from skype and I test it by uploading it using DC to some slaves to test it using the file manager. I just did use an old server for Darkeye crypter and a TLTK and none of them showed this window.

I'm sorry that your crypter shows this security box. but you didn't have to be an ass about it.

and I remember few months ago you did an update in the crypter and you said in the news box that this problem is solved and it will no longer appear. so it was a problem before and now it's not ?

How you spread the server has everything to do with the security dialog.

Ok tell me one way to spread the server without the security box showing? You say that it will show only 1 time!!!. Then you say it's a spreading problem!!(which means there is a way to spread without the security box pops out), so please tell us the way we should spread without the security box shwoing?

And don't tell me to stop talking! I am a customer who got a problem and clearly PMing you is not the right way to do it!

Here to interrupt to vouch for n0\$f3ratu\$ and his amazing crypter Data Protector. Last night he helped me for over a half hour on team viewer in depth on how to do about everything you could do with Data Protector. He went even further in depth than I expected anyone on the INTERNET to even go. The most amazing person on HF right here. Also the best product by far. Would not pick any other crypter. No other crypter anywhere is better than this and its FUD times along with the most important, amazing support! This crypter always stays FUD. ALWAYS. Id put money on that. Proud owner for 6 months! and counting..

Keep up the sales bud!

Edit: Id put a link to data protector in my Signature if I could. Sadly I do not have 50 posts. All hail noobs.

Amazing crypter! The new update is really awesome because the server now automatically updates on slaves :)

I thought I lost some slaves but the new update feature is really awesome. Best crypter on the market, no doubt about it.

Yes you do.

As you may or may not know Norton and few other av's have that system based on how many peoples are using your program.

It will flag automatically any application that is downloaded directly as exe which is not digitally signed and is not widely used.

So you better find other ways to spread and please read the news from the crypter and the rules for the thread or you may lose your license.

Good luck.

EDIT: LEARN TO SPREAD OR GIVE UP, you are just not made for this.

There are ways to spread without Norton picking up the server.?

i can see in first post, it says .net 2 is required, but is it to run crypter or to run crypted file?

n0\$f3ratu\$ - January 31, 2013, 10:00 pm

(Jan 31, 2013 06:55 PM)SpySnD Wrote: [\[CITE\]](#) i can see in first post, it says .net 2 is required, but is it to run crypter or to run crypted file?

Net framework is required for crypter to be able to run as well for the crypted file.

To be able to use all function's from the crypter the user needs net 4.0, but the crypted file only 2.0.

I wouldn't get it. Bought No\$Crypter from him a while back; lifetime license. Weeks later, he ended the project with little to no warning. Ended up buying the license for almost a month..

I'm not that upset. Was simply giving my opinion. Wasn't attacking you. The pop-up never said we could upgrade to DP for free or I would have. I enjoyed the crypter, it was good. The scanner sucked though it quit working shortly after launched. But I was just saying I personally wouldn't recommend it or purchase it since it would probably happen again.

A big or small update, however you want to call it for Data Protector v2.

Startup key is hidden from 99,9% of application's that can detect and display startup entries including msconfig and also from now on the server will run in safe mode too.

This is a LONG and BORING video, but i wanted to show you that nothing was tweaked in any way.

If is too boring then feel free to jump ahead.

The product might be good and updated, couldn't try, but the seller is the big issue, such an arrogant bigot, who insulted me for making a typo and then bad negative rep me when I told him it's unfair when he made a typo himself just after.

Buyer Beware who you deal with as a seller, since this product needs updates and support, and that is the biggest lack for this user. I'm sure his friends will try to back him up, but I urge you to think twice, even thrice before buying from such a seller.

Ridel, Mr. Ridel you should know better, when you make such a statement you should also post proof.

2. You should have known if there is any issues you should pm as you did earlier for unlocking your copy.

3. Thank you posting shit here, because you gave me a reason to ban you.

When i said shit is because this is my statement and i have proof:

http://scan4you.net/result.php?id=1ea73_3h2kjo

Get this into your heads peoples.

I am not here to be your father, brother, friend or whatever.

If you are stupid, i will treat you as such.

You should all consider the quality of the product, instead of my attitude.

If you don't like what i just said, then you should probably move on to the next thread in search of a crypter.

JiiN - March 20, 2013, 8:43 am

I use DP since 10 days for now, I can say that it's a good crypter even if it's in .net

I like the fact that it has a good FUD time and that it's inject our server in a trusted process so the victim will see nothing.

DP has also good rates with Netwire

n0\$f3ratu\$ - March 20, 2013, 1:26 pm

Alright guys.

This is an update to our problem regarding logging into NetSeal.

I just spoke with Aeonhack and he informed due to server migration ip has changed and may take up to few hours for all of us to be able to login and use the crypter.

Unfortunately neither he or i can do anything about that.

Some of us will be able to login in few minutes, others in few hours.

That being said please stop pm me regarding this issue.

All you do is to flood my inbox.

Thank you all for understanding.

Hey guys.

I thought i should let you know that the GUI has been changed and a new option has been added:
Save and Load your settings.

Watch the gif for better understanding and please let me know your opinion's.

jared05 - March 22, 2013, 8:52 pm

Thanks for the update n0\$f3ratu\$.. I will check it out later :)

Thank you n0\$f3ratu\$ for update, New GUI is nice but in my opinion the previous one was better!

DATAProtector is one of the most powerful crypters ever I see. Always FUD, thanks again. ?

Thank you h108 for your honest opinion.

I will wait for more opinions and if the peoples wants the old GUI back i will do so.

Also i want to say thank you to all the others for being such good and understanding customers. Couldn't ask for more.

Have a nice day everyone. ?

Actually I like the idea of DP v2 GUI as no one have this type of layout also I like the thing where you can save the settings and load them up by one click.

As far as I concern DP v2 is going better and better as because of n0\$f3ratu\$ give his time for his project. So, Good luck for your future updates!

Have a nice Day!

Because many of you didn't like the new GUI and you requested to go back to black theme version, here it is.

Please let me know if now is ok or not.

Thank you.

Thank you guys.

I also think about adding a downloader.

The process i am thinking will be something like this.

1. User must zip their stuff with a password before uploading to a direct link site.
 2. Before crypting in the builder user must put their direct link and the password he used to protect the zip file.
 3. The user will have to option's to execute their file: RunPe or shell.
- Once the zip file is downloaded using the password user put in builder before crypting, will get unzipped and executed.

What you think?

As far as the downloader that was just an idea.

Probably i won't zip the files but encrypt them so this way you can use either runpe or shell to execute it.

Review of ?DataProtector?

Summary: ?DataProtector? is a FUD Crypter by the HF member n0\$f3ratu\$, it is one of the very known to be high quality crypters on HF.

Payment Methods: Accepts Paypal, Liberty Reserve, and Western Union

The Prices are followed

\$29.50 - 45 Days LR/PP

\$47.50 - 90 Days LR/PP

\$70.50 - 180 Days LR/PP

TOS: No Crypting Service, No Using Scanners that distribute samples.

Rating: ?????????? 10/10 - The TOS is easy to agree to, and is displayed publicly for all to see before getting the product.

Graphics and Application Usability: The application is very nice looking, what makes it unique among other applications is that it is a custom source, unlike Public crypters, this is nicely designed. It looks like it took lots of time to create, which is highly believable.

Rating: ?????????? 10/10 Stars

Crypter Power and Updates: This crypter, is not only uniquely designed, but it simply crypts anything you throw at it 0/35 over 90% of the time! Updates are very frequent, which is really good as well, since you never have to worry about a UD rate. The Power lasts long, files stay FUD up to 2 weeks or more! As long as you upload files to a proper Direct download site like ge.tt and you will be fine.

Rating: ?????????? 11/10 Stars (Note: This gets an extra star, because the crypter is the most unique. Never have I purchased a crypter as good as Data Protector, I have been satisfied since I bought it, and am planning on buying it in the future)

Customer Care and Support Attitude: People have said that n0\$f3ratu\$ is a mean member, not at all is that true, n0\$f3ratu\$ is a really helpful member when you ask for Valid support questions, If I were him, I wouldn't play around either, if a member waste's my time with a stupid googleable question. n0\$f3ratu\$ will answer all your support questions within 24 hours. If he doesn't then he is busy, after all, he has a LIFE. People, you need to learn to have respect when someone is busy, Family and Life comes first before anything! You are lucky n0\$f3ratu\$ takes his time to get on HF to answer any questions you might have.

Rating: ?????????? 10/10

Conclusion of this Review: This crypter is one of a kind, before anyone buys any crypter, try Data Protector, I guarantee you will never look for another crypter again! You will be satisfied! I vouch for n0\$f3ratu\$ and his amazing product.

Overall Rating: ??????????| 10.5/10 Stars

P.S.: Current customers of Data Protector, do not upload files on Dropbox, Mediafire, or any file distributing site. What this does is the people/staff/bots will give the files to virus protector people that will analyze the crypted file and update the Virus Protection's database rendering the file Detectable!

Hello guys.

Some additional security measures were implemented by netseal.

Please read them very carefully.

This is a quote from the creator of NetSeal.

Code Some new features have been added to Net Seal!

-You can now configure IP locking which works very similar to machine GUID locking in the options menu. With this addition the default values have changed and it is recommended that you restore the defaults.

-Added a checksum validation feature. When enabled, this feature will instantly ban anyone who attempts to run a modified version of your assembly. This will help prevent users from dumping your remote variables and potentially cracking your application. When ever you create a new build of your application, just submit it to the Checksums tab in the panel.

I have just bought the crypter from N0\$ and a "BIG" thank you to him. It's a great crypter (there's no denying it) that comes with simple rules to follow. A big vouch for N0\$ as the transaction was fluid and he is a really polite man! Great stuff!

envy88 - April 12, 2013, 12:15 pm

Interesting crypter, but is it better than Byte Crypter? Anyone compared those two?

Thx

Nilinput - April 12, 2013, 1:08 pm

Going to buy it.

I have a comment on Nosferatu's attitude. I've spent hours, literally HOURS, reading this thread and researching his crypter (via his sight, terms of service, his youtube videos, etc.) His attitude is merely one of people who are bad ass at things, and know it. If you get assaulted by someone like this, it's not them you should be pointing fingers at, it's probably yourself. If that happens, you should be taking a deep look at yourself, and giving it some hard thought why the hell you got flamed in the first place.

Speaking from experience.

Just wanted to plug something. If you're someone who doesn't want to take the time to read shit, or do research on your own, I highly suggest you start. If you don't learn about some basic things before purchasing this crypter, you're gonna be on the fast track to losing your license to use it.

Just some friendly advice.

I have to say it's always FUD thanks to the coder, you won't lose any slaves! And please check the first page of thread to identify compatibility with your tools. As I know one of the customers say it's not compatible with Limitless but not sure because maybe he did something wrong while building server and crypting it.

Okay, so, here's my problems. I purchased DataProtector and I got my license and everything. I log into my account and the program closes and deletes it's self, care to tell me the problem? Also, I went to the link and it said "Payment To DATA PROTECTOR RefundedThe seller has refunded this payment in full. Go to the transaction details to see the payment method that was refunded.The seller has refunded this payment in full. Go to the transaction details to see the payment method that was refunded." But I never got my money back. Then, I tried purchasing again and it said "Your credit card isn't valid. Please try again, using another funding source.". I linked my papal account with a prepaid visa vanilla credit card. Then, it went on to say "Available balance \$0.75" and then "+ 04/16/2013 11:27 PM
PAYPAL *DATA PROTEC 4029357733 , CA
\$29.50".

Just incase, I went onto my other computer and downloaded the link from it and I opened it and I registered again, it said the license was in use so, I logged in with my license and it did the SAME thing. It closed the program and deleted it off my desktop. Why is this happening?

obviously everyone will choose cancel + it's so suspicious!!! No one will choose Run!!!! so basically this is a big fucking problem and I did crypt a spynet server and upload it on a DC slaves so I can approve that. and yes all of them showed this window. I used another crypters to see if the problem is from my server and I did run the crypted file and no Window pops up. so yes the problem is from the crypter.

and I didn't post here at first and I did PM the OP cuz he always says don't post problems in the thread.

So I did what he asked for and When I PMd him he said "learn how to spread" and he gave me -3 rep.

All I did is upload a crypted spynet server using dataprotector to a DC slaves to see if the window shows up to all of them or must of them.. and it did.

I asked him is it something I have to choose like an option in the crypter causes this problem or the problem from the crypter? so he can fix it.

and he -3 reped me!!

So if we post in the thread about a problem we have!! you go banning us!! and saying pm me if you have any problem, and when we go and pm you about a problem you go and -3 rep us?

Hi!! I'm interested on buying this crypter and have some questions, is this "problem" is solved or if I send the server after encrypt it to the gmail of the victim on a .rar file it will show up or if it wont... oh, and if I can change the output file from .exe to, for example, .docx or .jpg as I bind the server with a picture or a word file :D

Lately it seems everyone likes to post here instead of pming me.

Alright. From now on everyone who doesn't pm me and post here is bye bye.

It's really a good thing to do this.

I already had problems with the crypter, and it was small problems because of me or my AV. I never posted on this thread because it's annoying for the coder and for other persons like me who take a look at the thread only to see if there are important news from the coder.

I will give a small review in same time.

It's a really good crypter, it's the first time that I'm as happy as this for a crypter. I bought some crypters : Sikandar's Crypter, Absolute, Protection, Infinity and others that I don't remember the name, and it's the first crypter that I will renew.

It have good FUD time,I love the fact that it's inject the server into a trusted process like svchost or Applaunch. Personnaly I don't use the downloader and never tested it, but I tested the new binder and it's works good.

I don't know for the rates since I only spread via torrents but I think that rates are good.

Then I followed the instructions and created the server with Cybergate, done that, and as soon as I start DataProtector credited with username and password it close everything and delete the executable.

What's going on?

Note that before i do all this I had previously closed Malwarebyte and disabled my NOD32 AV "until the next reboot."

rore - May 2, 2013, 2:40 am

I'm currently using an other crypter (wich I won't name here), but I'm considering buying this one if it can bypass the problem I currently have with Norton Sonar:

My output file is 100% FUD, and copying it from a USB stick and scanning it with Norton won't give a detection... BUT on download (and on download only), I get detected by Norton Sonar.

Looking at the details of the detection, the menace name is Suspicious.Cloud.2

"Suspicious.Cloud.2 is a detection technology designed to detect entirely new malware threats without traditional signatures. This technology is aimed at detecting malicious software that has been intentionally mutated or morphed by attackers."

In other words, Norton doesn't detect the malware, because the crypter has hidden the signature, but it detects that the file has been crypted, wich is suspicious enough to block it...

Does your crypter bypass this? can you upload a crypted file somewhere like ge.tt and download it from a Norton protected computer to test it? (or send me a link and I'll download and test myself, if

you don't have Norton?)

If I'm 100% sure your crypter bypass this, you'll have a new happy customer ;)

My customers don't send the direct file because it will be tagged and ruin the fud time.

rore - May 2, 2013, 3:00 am

Well, some sites, like ge.tt, don't distribute samples (as far as I know)... But if you don't allow that with your crypter, no problem, I understand.

I guess I'll have to find an other way to work it out.

Thanks for your answer and good luck with the sales :)

Nowadays, hijacking Skype accounts is like taking a candy from a baby.

The method became public a while ago unfortunately.

That's pretty disappointing that such a huge program in costs of billions of dollars and owned by Microsoft is so exploitable.

That's why I'm very caution in giving away my Skype.

Hey OP you asked to verify the serial I got from a purchase. I'm new here so I need to make 10 posts before I can PM you back. I'll post throughout the day and get back to you.

Great crypter by the way. I'm new to this, but don't worry I won't test/spread anything unless it's inside a password protected rar.

I had one question though, is there anyway to avoid giving the file a description that says "Sink to receive asynchronous callbacks?" I'm pretty sure the message is not related to Dark Comet.

Thanks again!

Is there anyway to have the FUD server be a startup item without the binded exe its attached to also being a startup item? I've tried a lot of configs such as crypting the server first with the startup option then binding it to an keygen afterwards without the startup option checked. It seems like there must be a simple way to have the server run once and be integrated into the startup without triggering the binded file to also run each boot.

Any help would be greatly appreciated

edit: It seems to be with .NET programs I'm having trouble with. I chose the "Itself" option, but I can't get the program to actually run unless I "drop and shell file". However, doing that option causes the dual startup

Very amaZING TUT! on your Crypt, ppl seem 2 like it.
have been using RAT for 8 years , seems to be one of the best Crypters...
Does it stay FUD for long time?

what is best Crypter for darkComet? is it Dataprotector OR dark eye?

captainil - May 17, 2013, 1:12 am

Thank you for this GREAT GREAT crypter.

I've been trying most crypters and hackforums (Cube/Razor/Element/Absolute) and I must say nothing compares to Data Protector.

0/35 FUD, longest FUD times, updated daily, no dependencies, flawless gui.

VOUCH

Keep up your great work man!

Ultra vouch for the guy as he showed GREAT tolerance against my idiotic moves so the product is an excellent piece of coding BUT his support is even better!

nynno - May 28, 2013, 9:32 pm

After 2 weeks of using this crypter, all what i can say is: is verry nice one and when 1 AV detect your files the update come very fast.

Vouch for n0\$f3ratu\$ and his crypter.

jontaon - May 29, 2013, 1:49 am

Does this bypass Avast firewall? As my experience avast is the bad AV that always popup and saying crypted file as suspicious but not a virus.

Yes is bypassing Avast firewall as for the second remark "file as suspicious but not a virus" you can't bypass that.

Yes, it's FUD now and you won't get any detection after crypting! Updates are frequently and regularly. FUD time depends on various parameters, specially customers! ?

If you would reply to my PMs, I already proved you that is my paypal, if you want I can also send you a picture of an official document with the name of the account holder (my mom). Maybe I can't

use my name on it because I am not 18 yet?

Anyway, you can ask me for any proof to verify that is infact my account. If you don't I think you should atleast remove the negative reputation and refund the money, because I am the owner of it, and it is MY money.. I already send an email to the same mail as the paypal money went to (19**mpia@gmail.com).

Hey community. ? I enjoj this crypter in combination with bshades and bshades i set up ,with the little tutorial which i founded in the rar folder for this crypter. Now it can be very interessted for "beginner" and for "all bhades" user ?

How is the beste Configuration, that my files have a LONG Fud time ? Which experience do you made with the best config, to the FUD time ? ? I know that AV can kill my files very fast when a new update will be available.. ?

Which is the beste setting for this one : <http://www.workupload.com/file/DznlytB> . On the the browser for server i put my server.exe in . Which engine you use ? I use most VBC ...

2.) <http://www.workupload.com/file/IX2yxFD> . Here is important for me, which steps do you do on the following steps 1,2 .

3.) I try to pump up my files to 112 mb. Can i scan those files without any problems ? Is my File FUD "after" the pumping. Or will it changes all my Config ?

About positive feedbacks about this, i would be very happy.

regards and thanks in advance

Vouch for n0\$f3ratu\$, this crypter is the best out of the 7 I've bought during this past year, none of the crypters on HF was doing the job and when I found data protector, it simply is amazing

I have used data protector for some time now, the crypter is updated regularly by n0\$f3ratu\$, he spends a lot of time on this.

I haven't tried anything else other than VBC process injection and startup, but his crypter is always 100% FUD when I do crypt my files.

Don't hesitate to buy this crypter, it has been here for a long time and n0\$f3ratu\$ will provide you with 100% support!

Also works perfectly with CG Excel just disable injection on crypter and use injection on CG Excel.

Super product!

DP is Incomparable to other crypters because is completely different, is so powerful, fast, with unique features and nice support. Always works smoothly...
Thank you again n0\$f3ratu\$ for this job! Keep it up man.

This is the BEST crypter on HF. Definitely. I spent \$70 in other ones in weeks and this one outmatched them all. Do not buy Byte Crypter that one sucks and the owner was incredibly rude and his mates repfucked me (for mentioning obvious flaws lol) too much of an egomaniac to even realize it's obvious flaws or acknowledge them and help customers. I will never buy another crypter after this one.

10,000/10 would buy again this crypter gives me good vibes and good times best thing I've ever spent my money on paid for itself in like an hour this crypter is the best hands down don't buy anything else srsly

That is not a scam report but a rage from a but hurt kid because i said something is not right with his paypal.

And another thing. Right after you started using the crypter already you had 2 different ip's.

That combined with your paypal email address made me decide to ban your license and partially refund you, because you already used the crypter.

To be able to run with imminent you must inject in it self as for that error never happen to me. Before releasing an update i always test first, so if you get that error from time to time is really weird.

No it doesn't.

And the crypters that does that are not HQ crypters because runtime detection's are high.

This kind of function belongs o spreaders alone.

(Aug 8, 2013 12:53 AM)Enlightened Wrote: [\[CITE\]](#) Does this crypter support run once the binded file?

Is like this.

Slave downloads the cryted file which is binded with a photo for example.

Until the pc is restarted the binded file will work normally.

If the slave runs the crypted file 10 times then the binded photo will open 10 times, but after restarting the pc the binded photo will not run anymore unless the slave runs the original crypted file.

I hope you understood what i tried to explain.

I've just bought this crypter. It's too early to outright vouch, but everything seems in order.... Everything is a simple and intuitive as it could be, it's very easy to use and it has a cool timer than shuts down the program after 4 minutes, so you can complete your work as soon as possible and get right back to spreading. I was able to crypt a file 0/35 after only a few tries.

Definitely satisfied with this software.

Just purchased this very fine piece of software. I am highly impressed. Truly overjoyed to have finally given up on Jerome Marshall and TLTK and pulled the trigger on a working crypter. I am convinced I have made the right derision on a replacement. Worked flawlessly on the first attempt. 0/35! NO issues whatsoever. My binded file acts appropriately. The binder is VERY important to me with the method I use this for so I was very happy to see there were no issues there. So long as the crypter stays updated I will continue to renew every month. Great job with this n0\$f3ratu\$, really man, I love it. Keep up the great work.

Pay 30 dollars/MONTH for a crypter that is not free and get banned for saying that it's not FUD..

As long as you are right nothing will happen to your license.

"Pay 30 dollars/MONTH for a crypter that is not free..."

A good choice if i may say.

"...and get banned for saying that it's not FUD.. WTF"

Yes because you are wrong. If something is detected then is something from your side.

Never known or seen a great guy like Nos. I had a problem with crypting and this nice guy spent over an hour on tv helping me out. Though i have always been afraid to approach him based on what some people say about him, nevertheless, he proved me and those people wrong. Now I realise why he may be like that to some people....they probably pissed him off. Nos, you are truly a gentleman. Thumbs up for you.

Vouch for this program

I bought it roughly a year ago for Blackshades and loved it. I made the mistake of buying another crypter a week ago and haven't seen FUD status since I bought it. This is a premium priced crypter but it is definitely worth it, creator was very helpful last year when I needed assistance. Look forward to using it again!

After crypting using the option "compression" from the crypter the output is with only 5 kb bigger then unencrypted server.

So, unencrypted server = 64 kb / crypted server 69 kb.

The Hidden feature is the bug which was released a-lot of time ago?

What I mean is that you need to put 255 chars and only than add the key name etc..

I would need detailed answers to my questions, kindly do that coz I really Need a good crypter and 30\$ is not a small amount for me. :(

1. Will malwarebytes detect it? I used another crypter which was FUD according to Scanners, but ended up being detected as potentially harmful by malwarebytes.

2. Should I use DC/Blackshades/Imminent Monitor/Cybergate or some other to build my stub? Which is best suitable?

3. Would u be able to offer support through TV/Skype/PM without being bugged or getting offended when I have an issue? Actually I never bug people coz I understand that solutions to problems take time, but all I expect is a proper response detailing the status of issue. :)

I know m not your only customer, and I know you are busy helping a lot more as well as improving your product. But kindly take out the time to answer me.

Looking forward to hearing from you and doing business with you.

Ciao!

Hello Noob.

1. It is possible. It is possible because in my case MBAM is detecting the names of the files and nothing else.

I can't change the names of the files every 3 day because that would be a waste of time.

2. Anything but BS. BS is dropping the third file to appdata and none of us, the coders can so anything about it.

3. If you ask the right questions's, if you try it before asking, if you read before asking, the YES without a pro

Oh f#@k why did I not read this before buying LOL

I need to PM n0\$f3ratu\$ my serial but I cant because I dont have 10 posts..
?

How long before he bans me from using it ???
HELP ME LOL ?

OMG I just tried to use Data Protect V2. and every time I try to start it opens up the login box then disappears and then the .exe deletes itself???

I have AV off and windows defender off so I know its not them thats deleting it..sooo WTF ???
Have I been banned already? I only payed for it like 4 Hrs ago (and I had to go out for 3 of those).

I'm in need of help guys, have I been banned or is there something else at hand here??

Best crypter on HF with 100% support.. Nice-1 NO\$. You got my Vouch..

alienface - October 19, 2013, 4:54 am

Hey n0\$3ratu\$ and thanks for this awesome tool. I just bought it and it worked fabolously the first time. However when i try to start it after it closed the first time, it just won't open again. It takes me to login, i input user and pass, it says 'Connecting.' and then it closes. Also the 'Data Protector v2.exe' file disappears and i have to unrar it again. It just wont open.

I've tried disabling antivirus with no luck. The only AV i have installed is AVG Free Edition 2014 and the file + folder is added to exceptions. And also i tried temporary disable AVG. Anyways this shouldnt matter since it worked with AVG on the first time, and didnt detect anything (Realtime Scanner).

And NO i have NOT scanned with a dustributing scanner, or any scanner at all. Halp plox`?

Your problem have very simple answers:

1. Do not use injection persistence.
2. CHANGE YOUR PC and use injection persistence.

Hello BRW... Regarding your questions the update is made when is need it and very often even when is not need it just to make sure everything is alright.

As for av's there are only certain sites that are allowed to scan on because they do not distribute samples to av companies.

Asking here instead of asking me directly shows you are not very smart.
Anyway this happen because of the checksum of the builder.

A question for n0\$f3ratu\$...

Isn't it bad for lots of users to use your crypter ? I mean... in other words ... Doesn't it get Non-fud in 1 week :o :o :(

If you can do something about that i may buy a Big Package for your services

And how much fud time would you like?

1 month, 1 year?

Even if you had a private crypter depending on your spreading methods the fud time wouldn't last more then 2 weeks.

I just want to vouch for this amazing crypter. I have been buying Data Protector since it came out, and I have not bought anything else. If you get this, you wont need to get anything else. The coder is extremely helpful, and it has good FUD times. I have bought around 8 crypters on HF, and this one seems to be the last one I have needed for a long time. Thank you Data Protector for all the things you have helped me with!

as far as i saw many .Net Crypters in HF i think Data P2 is the Best among All

Have a ton of Sales....

n0\$f3ratu\$ - November 29, 2013, 5:03 pm

Thank you guys for your ind words.

Crypter is fud and up for sale.

ca1n - November 29, 2013, 5:46 pm

just a quick word to any perspective HF members looking for a crypter...

I've trialed DATA PROTECTOR for about a month now n' happy to say it works well (for everything I used it with). It's quick and basically does what it's supposed to, all wrapped up with a pretty neat GUI.

Access restored.

Next time follow my rules.

DataProtector is now compatible with [Plasma Rat](#).
I thought i should let you all know as many of you asked me about it.

Buzzle - November 30, 2013, 2:25 pm

This product I've been using for just way too long. It is amazing, I must say I honestly can't explain how much I've enjoyed this product over the long times I've been a costumer.

Still the best crypter I have used so far. ALWAYS FUD!!!!

Peppe_G - December 1, 2013, 2:28 pm

Hello, I am interested in buying this crypter

oneB - December 2, 2013, 2:48 am

I want to purchase your crypter but cannot pm you as I need 25 post all of a sudden. Can you PM me your skype ID, email and payment details?

Thanks.

arsenel - December 2, 2013, 4:27 am

Ive used almost all the crypters in HF and i can say data protector is one of the best with long fud times compared to others and fast updates and stability.

the owner may seem a bit rude but when i put myself in his shoes i may understand trying to deal with a lot customers but at the same time with a lot of noobs also would touch my nerves too

For the best result with my victims i use 2 different rats and 2 different crypters. And if one of them gets detected i can easily update the server with the other rat.

I can say as long as this projects continue data protector will always be my number 1 crypter.

Thinking logical that means DP is not compatible with soviet miner.

Simple as that. Move on.
