Thread: [How to make an Auto Typer on Notepad and how to use it!!! SIMPLE and EASY!!!!](#)

Racism - December 27, 2012, 9:52 am

Here I am going to make a Tutorial on how to make an Auto Typer through Notepad.

1: Open up notepad

2: Copy and Paste the Code on the bottom of this thread on Notepad!

3: Click File, Save As. and save it as .VBS. but... you can name it anything you want!!!! then click Save

Example: autotyper.vbs

4: Your Auto Typer is made. if you cant find it, go to "Search programs and files" and type in what ever you called it.

5: Open a New Notepad. Run the Auto Typer, type in the message. Click OK. Type in how many times you want it to type it. Click OK. Then wait 5 seconds and it will spam for you, the amount of times you set it too.

Bibliography:

<http://www.youtube.com/watch?v=rxNh-hpOTG4>

Code:

```
set shell = createobject("wscript.shell")
strtext = inputbox("What would you like the message to be")
strtimes = inputbox ("How many times would you like you type it?")
if not isnumeric(strtimes) then
lol=msgbox("Please write a NUMBER nextime")
wscript.quit
end if
msgbox "After you click ok the message will start in 5 seconds "
wscript.sleep(5000)
for i=1 to strtimes
shell.sendkeys(strtext & "")
Shell.SendKeys "{Enter}"
wscript.sleep(75)
next
```
