stdio - December 30, 2012, 5:36 am

About 2 weeks ago i released a free version of H-Keylogger

<https://hackforums.net/showthread.php?tid=3077333>

A lot of people tried it and loved it, here are few vouches

(Dec 20, 2012 06:43 PM)AuXFire Wrote: [\[CITE\]](#) Nice stuff man. Simple GUI and clean. Looks great.

(Dec 22, 2012 01:46 PM)Elements. Wrote: [\[CITE\]](#) Vouch! Legit program! The shitcash is worth it!

(Dec 23, 2012 03:38 AM)H3X4G0N Wrote: [\[CITE\]](#) Great keylogger! Absolutely wonderful, I'm currently keylogging myself to test the keylogger. It's great how the logger runs as taskmgr, you'd never expect it!

Built-in file pumper is also extraordinary.

Best part I'd say is no portforwarding, just setup an FTP account and you're set!

Homi is super HQ, helped me out with everything I needed.

Brilliant keylogger, incredibly simple, and fast, and easy to use! One question though, how do I 'uninstall' it from a slave machine?

To stop it permanently, end task the taskmgr.exe as described previously then open Application data folder and delete the file "taskmgr.exe".

NOTE: taskmgr.exe is hidden to make it visible follow these steps

Create a txt file

Write "ATTRIB . -S -H -R" to this txt file without the qoutes

Save and then close.

Rename it to 1.bat

Run the file

if you don't know how to open Application Data folder
follow these steps
Start->Run->enter "%appdata%" without quotes
