Thread: [How to setup your own IRC Botnet.](#)

GREGORY - December 30, 2012, 7:43 am

Things you'll need: VPS/Dedicated server (CentOS, Ubuntu)
A brain

1. Update

Code:

yum update (Ubuntu: sudo apt-get update && upgrade)

I have already updated mine.

2. Install gcc, make, nano

Code:

yum install gcc make nano (Ubuntu: sudo apt-get install gcc make nano)

I have mine already installed to the newest version.

3. Download UnrealIRCd 3.2

Code:

wget <http://www.unrealircd.com/downloads/Unreal3.2.9.tar.gz>

4. Extract the files

Code:

tar xf Unreal3.2.9.tar.gz

5. If you plan on having more than 1024 users/bots, upgrade the setsize.

Code:

nano /usr/include/bits/typesizes.h

Scroll down to "#define __FD_SETSIZE 1024" and change 1024 to 12000 (or how much you plant to old).

Save the file.(Ctrl & X, Y, Enter)

6. Enter Unreal folder:

Code:
`cd Unreal3.2`

7. Enter Unreal config

Code:
`./Config`

Hold enter until it says 100% on the bottom or when it says "[Enter to continue]"

Press enter until you get to "How many file descriptors (or sockets) can the IRCd use? [1024] ->"
Type 12000 and press enter for the rest

8. Copy and paste this code from the pastebin link I provide, it is the unrealircd.conf. [Click Here](#)

Type, `nano unrealircd.conf`

Then paste the code from pastebin, if you use Putty right click to paste.
After, edit to your liking.

MAKES SURE YOU CHANGE THE FIRST MAX CLIENTS TO THE LIMIT YOU PUT WHEN YOU CONFIGURED

Under the oper block, I would add these lines

add

Code global;
services-admin;
can_rehash;
can_die;
can_restart;
helpop;
can_wallops;
can_globops;
can_localroute;
can_globalroute;
can_lockill;
can_globalkill;
can_kline;
can_gzline;
can_gkline;

```
can_uncline;  
can_localnotice;  
can_globalnotice;  
netadmin;  
can_zline;  
get_umodew;  
get_host;  
can_override;  
Should look like this when you are done.
```

Save the file (Ctrl & X, Y, Enter)

9. Type: make

10. Start your IRC

If you get an error saying could not find, ircd.motd.fr, ircd.rules.fr, ircd.log. Just type: touch ircd.motd.fr ircd.rules.fr ircd.log

Type..

Code:

```
ulimit -n 12000;./unreal start
```

You will now be able to connect to your IRC using a client like "mIRC" for Windows, "LimeChat" for Mac, or "KVirc" for Linux."

Thank you for looking at my TUT, I hope you enjoyed it ?

If you need any help contact me on skype by clicking below.

Long time i seen a good tut nice job bro

joand_rcc - February 10, 2013, 5:50 pm

great tutorial .very easy to understand thanks

verbti - February 10, 2013, 6:13 pm

There is a guide on here already for this.

Boss-net - February 10, 2013, 6:23 pm

(Feb 10, 2013 07:13 PM)verbti Wrote: [\[CITE\]](#) There is a guide on here already for this.
What does it matter? The more the merrier, there is nothing wrong with him donating his own tutorial.

If you don't like it, leave it. Don't flame his thread.

Gregory, nice tut buddy. Good to see another guy like myself on here. :)

Cheque - February 10, 2013, 6:36 pm

There are already tutorials posted.
No need for new ones.

VaMpZz - February 10, 2013, 7:41 pm

No need for new ones. please stfu & stop flaming. This is the best IRC tut I've seen in awhile. The other ones are pretty much outdated.

Nice tut OP, I plan on building an IRC soon, so I definitely will be bookmarking this.

kingkelvin135 - February 10, 2013, 7:50 pm

I like the tut you made, good work and easy to follow.

keriboh - February 10, 2013, 8:36 pm

Alot more detailed when it came to installing Unreal. good work man :p

Break - February 11, 2013, 2:57 am

This is the best tutorial I seen on this forum and one that actually works so good work for that Greg.
@Boss-net you just sound like a fag, sorry.

GI?ck - February 11, 2013, 3:04 am

You are ignorant.

Just because there is one tut ready doesn't mean he can't post another one. And, his tut is very updated unlike most tuts around here if that's what you're referring to.

Lay off loser

Monkey D. Dragon. - February 11, 2013, 3:09 am

Very nice tut this will help many people :)

??? D?¢??? - February 11, 2013, 3:16 am

Very nice tut,
thanks for this man.

bish0p - February 11, 2013, 3:24 am

Cool man. But I actually have problems with the config.

Could you explain a little more in detail what to do with it?

Like e.g. the Link couldnt it be deleted? Since I dont wanna link servers that are non-existant.

Further wouldn't it be good to set some more options for the channels if you want to host a botnet?
Like e.g. no visibility, noone could do /list or /whois or /who?

Regards

?MYX - February 11, 2013, 3:40 am

Very nice Tutorial. keep up the good work mate. ;)

Cheque - February 11, 2013, 11:47 am

HQ IRC tutorial.

<https://hackforums.net/showthread.php?tid=145184&highlight=irc>

Easy to find.

Search button put irc.

boom not hard.

It's against the rules to post more threads the needed in 1 given section that tutorial is by far not outdated.

Plus i think aadster gives a tutorial and he's way smarter than you loser.

Thank you Break. ? Some kids are just clueless. ?

kstreat - February 11, 2013, 2:09 pm

Can anyone make a tutorial where you don't have to happy a vps? ;) anyone accept that challenge? :P

jowsie - February 11, 2013, 2:39 pm

(Feb 11, 2013 03:09 PM)kstreat Wrote: [\[CITE\]](#) Can anyone make a tutorial where you don't have to happy a vps? ;) anyone accept that challenge? :P

Well what do you plan on running it on then? You need something to run the software on ...

If you say web hosting, then just lol ...

You could run from your home connection, but lets face it you aren't running this IRCd for legal reasons so that would be stupid.

x2SiKJaYzZ - February 11, 2013, 3:13 pm

Really HQ Tutorial i understood it very well and this is my first time thanks

atled - April 3, 2013, 1:20 pm

The created botnet in this tutorial, its just a server, right? So if you want some ddos attack you need zombies, then your virus need to infect some computers to recruit zombies. So at the beginning you can't do anything right?

| ZooT | - April 7, 2013, 4:40 pm

Looks suspiciously like the one I posted last year. Almost all same wording...

FantaŠec - April 7, 2013, 4:42 pm

Looks almost the same one as I posted last August too ?

Panoptic - April 7, 2013, 4:49 pm

Nice tutorial, easy to follow for clueless people.

Brosephz - April 7, 2013, 4:54 pm

Good post, I was going to make this myself I just never got around to it.

Will be helpful for those considering paying for this service.

Zanelot - April 7, 2013, 9:27 pm

5 starred the thread, looks like an amazing guide.

I'll be using it :)

Thanks, I'm glad you found it helpful. Let me know if you need anything :)

RedMonkey - October 19, 2013, 4:34 pm

I really like this tutorial!

Keep up! :)

imahacker97 - October 20, 2013, 12:24 pm

This is sweet dude! thank you so much! im going to definitely use this!!

Vexah - October 20, 2013, 8:13 pm

Nice tutorial very detailed and noob friendly...

Devising - October 20, 2013, 9:35 pm

Nice tut but looks more like how to setup a irc server then a botnet.

Maybe you should change the title but other than that it was pretty detailed good job.

MastaChiefer - October 20, 2013, 11:15 pm

thanks for the tut, i totally forgot how to do this.

Raganius - *October 21, 2013, 12:01 am*

it will work if i put CentOS on wmvare or virtual box?

hansbald - *October 21, 2013, 1:26 am*

Really well explained.

But I have one question.

Do you know the IRC-Command for /setauth I mean the real IRC-Command not the command from a client. I want to make my own Bot-Commander :/

Marreez - *October 21, 2013, 7:42 am*

Nice tut man, really easy to follow tbh

un3d - *November 5, 2013, 11:20 am*

nice tutorial .very easy to understand thanks a lot
