Hello everyone

I've been working on a IconFinder Desktop tool for a long time and I'm finally ready to release it! If it contains any bugs/flaws tell me! Also, I'm not giving away the source (every decent coder can figure it out).

Once downloaded and extracted, you need to obtain a IconFinder API Key [here](#) (requires registration).

Goto options (gear) and enter the API Key. Press 'Save'. If the API Key is valid, it will save and the application restarts.

Here you can input a search query, the amount of pages you want to search, the license level and the icon size.

After searching you can right click to download a selection or all found icons.

-> Temploit: Creation of the application

-> Aeonhack: Themebase

-> IconFinder: The icons and API

DO NOT REDISTRIBUTE!

Very nice, looks good. I'm fixing to download and check it out myself! (: Good job.

Cody8295 - January 1, 2013, 4:23 pm

Nice use of the API. I remember making one with parsing, but I didn't know they had an API back then...

soviet87 - January 1, 2013, 5:10 pm

Oh wow. This will make browsing for stuff much easier, thanks!

TrackPro+ - *January 1, 2013, 8:16 pm*

Thanks man, this is nice. No more going to the website :P

Odayleet - *January 1, 2013, 10:43 pm*

Very neat application, good job buddy! :D

INFA?OUS - *January 1, 2013, 11:15 pm*

Looks good. Im going to check it out. Thanks for the share ?

Temploit - *January 2, 2013, 3:38 am*

Thanks everyone! If there's something I should add tell me!
