Thread: [\[Tutorial\] How To Completely Destroy Somebodies "YourWorldOfText" Page](#)

Kaleb - January 8, 2013, 2:32 pm

Hey guys since I completely hate fun and everything relating to enjoying yourself I'm going to teach you how to ruin other people's fun with a few simple programs and some "scripting".

Go ahead and [download AHK](#) (or AutoHotKeyBinder) if you don't already have it it's a pretty useful program and goes beyond just sending keys to the computer.

Now make a new notepad document and begin writing your script, now lets say you want the script to post all over the wall "I like to kick babies and throw kittens off of balconies rape!" go ahead and copy that phrase, then paste it into your notepad, and press enter, putting each letter onto its own line, but the trick is to do it without spaces, you'll see later we will send the input of the space bar. Once you have each letter on its own line copy the word "SendInput" without quotes, put it before each letter and a space between them, like "SendInput I", on its own line, once you've done that put "SendInput {Space}" without quotes on your clip board, put it between each word, like this

Code SendInput R

SendInput A

SendInput P

SendInput E

SendInput {Space}

So eventually you should have this:

Spoiler ([Click to View](#))

PHP Code

```
<?php
```

SendInput I

SendInput {Space}

SendInput I

SendInput i

SendInput k

SendInput e

SendInput {Space}

SendInput t

SendInput o

SendInput {Space}

SendInput k

SendInput i

SendInput c

SendInput k

SendInput {Space}

SendInput b

SendInput a

SendInput b

SendInput i

SendInput e

SendInput s

SendInput {Space}

SendInput a

```
SendInput n
SendInput d
SendInput {Space}
SendInput t
SendInput h
SendInput r
SendInput o
SendInput w
SendInput {Space}
SendInput k
SendInput i
SendInput t
SendInput t
SendInput e
SendInput n
SendInput s
SendInput {Space}
SendInput o
SendInput f
SendInput f
SendInput {Space}
SendInput o
SendInput f
SendInput {Space}
SendInput b
SendInput a
SendInput l
SendInput c
SendInput o
SendInput n
SendInput i
SendInput e
SendInput s
SendInput {Space}
SendInput r
SendInput a
SendInput p
SendInput e
SendInput !
```

Not here comes the even funner part, you need to add a sleep thread between each command to avoid it picking up on the binder sending unrealistic typing speeds, I've decided 30ms is the least buggy non detectable limit, so add "Sleep, 30" between each line. Here we are now:

Spoiler ([Click to View](#))PHP Code

```
<?php
SendInput l
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput l
Sleep, 30
SendInput i
```

Sleep, 30
SendInput k
Sleep, 30
SendInput e
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput t
Sleep, 30
SendInput o
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput k
Sleep, 30
SendInput i
Sleep, 30
SendInput c
Sleep, 30
SendInput k
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput b
Sleep, 30
SendInput a
Sleep, 30
SendInput b
Sleep, 30
SendInput i
Sleep, 30
SendInput e
Sleep, 30
SendInput s
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput a
Sleep, 30
SendInput n
Sleep, 30
SendInput d
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput t
Sleep, 30
SendInput h
Sleep, 30
SendInput r
Sleep, 30
SendInput o
Sleep, 30

SendInput w
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput k
Sleep, 30
SendInput i
Sleep, 30
SendInput t
Sleep, 30
SendInput t
Sleep, 30
SendInput e
Sleep, 30
SendInput n
Sleep, 30
SendInput s
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput o
Sleep, 30
SendInput f
Sleep, 30
SendInput f
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput o
Sleep, 30
SendInput f
Sleep, 30
SendInput {Space}
Sleep, 30
SendInput b
Sleep, 30
SendInput a
Sleep, 30
SendInput l
Sleep, 30
SendInput c
Sleep, 30
SendInput o
Sleep, 30
SendInput n
Sleep, 30
SendInput i
Sleep, 30
SendInput e
Sleep, 30
SendInput s
Sleep, 30
SendInput {Space}

```
Sleep, 30
SendInput r
Sleep, 30
SendInput a
Sleep, 30
SendInput p
Sleep, 30
SendInput e
Sleep, 30
SendInput !
Sleep, 30
SendInput {Enter}
Sleep, 30
```

Now all we need to do is assign a key to the bind, and make a loop, to do this press enter behind the very first letter at the very TOP of the script, and on the blank line you just made type "1::" this makes 1 the keybind that activates it, now at the end of the script we'll make the loop, add "SendInput {2}" now copy and paste the entire script and make two new lines (leave a space between each script), and change the "1::" to "2::" now a new issue arises, stopping the script. Make a new bind on left alt put it on "LAlt" just like this -

PHP Code

```
<?php
LAlt::
Pause
return
```

Set the world of text on another row / line, and press the bind again, I forgot to mention add a sendinput of {enter} at the end of both your spam scripts so it keeps making new lines and typing it, then you can cover the entire wall like I did here -

<http://www.yourworldoftext.com/OpisGhey>

Save the notepad file as file type: all files and an extension of .ahk, or if you suck you can download my AHK script here, just double click the script to launch it and to start on new lines pause it.

If you suck and can't make your own script go here-

<http://www.mediafire.com/?cpr6dc63dp2e42o>

So yeah hope it doesn't seem too hard, it isn't and I really can't fuck with pics since I gotta study for finals

EddietheZombie - January 21, 2013, 2:00 pm

Haha, this is could come in useful :D

Really clear tutorial as well, thanks!

sam2011hacker - January 22, 2013, 6:51 pm

Very Nice, keep it up.

I liked the software AutoHotKeyBinder, gonna help me a lot in future

Kaleb - January 23, 2013, 6:47 pm

Yeah its great and im glad somebody fucking read this thread rocknroll!

AustinKeith2010 - September 7, 2022, 3:32 pm

it leads to a f**king scam site now

CompletedMaze - September 7, 2022, 3:59 pm

Much more efficient to open a websocket and spam messages. The ws communicates in plain JSON. This way you don't even need the webpage open.
