Thread: [Test Victim](#)

Ayden™ - January 9, 2013, 12:19 am

Hello, I currently set my rat/keylogger up.

Would anyone be nice a enough to lend me one of there slaves to infect.

My rat/keylogger isn't Fud atm so... <3

To test your server, so you don't need a test slave. i'd recommend following these instructions

- First download [Sandboxie](#)
- After when you have installed Sandboxie, right click your server
- Then click run server in Sandboxie
- Then you will see yourself come up on your Remote Administration tool

lancesavoy1337 - January 9, 2013, 1:26 am

Or just PM me with your Server and i crypt it and give you 5 free slaves. Its free. :P

Regards

OP, Look at his Rep.

If I were you I would either buy a crypter or get a trusted user to crypt your server.

Reason: He could easily bind his server to yours and than you are giving him free installs.

But its your own choice :)

Use 127.0.0.1 instead of NO IP make a stub

run it with sanboxy on your PC,

if you see yourself popping up on the client - you are good to go

Volim te - February 7, 2013, 1:59 am

Use a Virtual machine no need for a "test" infection.

Yes but it'll take time to set up that shit,
sanboxy is better ?
