Thread: [Adding image\(s\) to another image?](#)

Son_Of_Diablo - January 9, 2013, 5:14 am

Hello!

I'm trying to make a PHP script that will add one or more images to and already existing image :)

what I have so far is just a script that makes an rectangle with some text, but I wanna add another image on top of the first one (the one the script is making).

But I can't figure out how to do this :/

I have tried to Google it but no luck there :/

Can you please help me? :D

Many thanks! ?

You need to work with GD and ImageMagick . These two are image editing libraries for php, Google 'em, you might get what you want.

This should help you, OP:

Thank you guys! :D

I will take a look at it :P

Many thanks! ?
