Thread: [What VPN u use with Netwire?](#)

.?x? - January 10, 2013, 3:35 pm

Hi,

I am having issues viewing keylogs and screencapture. Basically starts loading and then drops the connection.

It is due the VPN I am using which is NVPN and UK as location.

What VPN you use without issues`?

thanks

I Personally don't use a VPN, as the people I rat are stupid as shit. I'm not scared. I Only use a VPN when ratting my school network, That's it. Which happened once about 2 years ago, And will be happening again this year. Had I kept the slaves updated, I would still have had them. Now my goal is to re-rat my school network.

Now my goal is to re-rat my school network. You're clever, not. Just because you don't use a VPN for ratting what you call "Stupid as shit" people, does not mean you will not get caught. And ratting a school network is a government offence. I think you will be scared when you end up with shit tones of charges when you get caught. ?

ryoh - January 10, 2013, 3:42 pm

I use AffinityVPN. It's fast, and starting at 2 bucks...

#Skyline - January 10, 2013, 3:42 pm

I suggest using Nvpn, as it keeps no logs, and you can port forward

Hedex - January 10, 2013, 3:44 pm

Im using NVPN. But I was told by support team to use a diffrent VPN , because of Nvpn I cant use netwire propely.

So thats what I meant :)

nVPN doesn't work with NetWire? Aww, I use nVPN and I wanted to get NetWire pretty soon.

I'll probably have to buy something else when the time comes then.

Keep me up to date if you ever get it working or which one you change to that works with it.

razldazl - January 10, 2013, 4:37 pm

I use nvpn and also have a problem with screen capturing and key logging and transferring files ect. it hangs users dcs and then re connects, can anyone else confirm this is strictly an nvpn problem, i dont understand what would cause this

Im not stupid enough to RAT on my own network, My neighbors, Leave their network open. Their router? Fucked, Doesnt log anything. However, I Do use a private VPN that has no logs when i decide to rat the school network. I've only got Caught once, But not for ratting, I Created (well found) a script, that once ran, (VBS Script) It'd Start Making your PC Flip out (CD Rom opening/closing, Every word you type, it'd backspace 1 letter as you type, It'd shutdown without warning & Restart). That i only got caught for because a student, Who i thought was helping me, instead ratted me out. I Got suspended for 2 months, Which wasnt bad. Lost access to school computers for the rest of that year. I now gained access to 2 teacher accounts, and 3 student accounts + Mine. Believe it or not, For "Serious hacking", I've never been caught, Mostly because i just rat their computer and do it from home on a different network. The school upgraded their Anti virus from Norton to Viper GFI Business Edition. And before norton, They had nothing, They only put it after i got suspended for this "Hacking", which i didn't consider hacking, as the scripts did it, not me.

PS: Those scripts, Were 3 Combined together.

Blackberry® - January 10, 2013, 5:03 pm

Use [censored] vpn.... It's good and 100% working :)

BoomShot - January 10, 2013, 5:05 pm

(Jan 10, 2013 06:03 PM)TrossyFirst Wrote: [\[CITE\]](#) Use [censored] vpn.... It's good and 100% working :)

You cannot use [censored] VPN with RATs, since you can't port forward with it.

Hedex - January 10, 2013, 5:38 pm

I don't get this at all really. All no log VPN's should do the same thing. Who told you this information OP?

#Skyline - January 10, 2013, 6:01 pm

A few nvpn users have had trouble with connection hangs while using netwire, haven't heard of any other vpns having problems with nw at this stage.

its a shame because i dont know a vpn that allows port forwarding (more than 1 port at least)and keeps no logs and allows anonymous signups

PS: Those scripts, Were 3 Combined together. You school is dumb as fuck letting students run vbs scripts. But what I was saying was, it is not even worth ratting it. You still can get busted even if you think you cannot. Most companies that say they have no logs usually keep logs. What you're doing

is a government offence, they will go to high standards to find who did infected the school network. The fact that you have already been caught by the school makes you a target. The school might turn around and say that you could have done it, your computer gets taken by the police and boom. If you're going to do this and serious about doing it, (I would not recommend it) be sure to encrypt your drive.

thought that was funny, anyway, so nvpn doesnt work with netwire? i find this hard to believe....also depending on where the vpn server is located...choose wisely..my guess is theres always a log somewhere, but dont give them a reason to go dig it up. IE be your host in say...serbia and u fk with serbian govt...feel me?

PS: Those scripts, Were 3 Combined together. Since it's a government offence i really think the government would look at ANY IP in the rage of their wif. And instead of doing all those kiddish stuff learn about ARP poisoning attacks and spoofing and Ipv6 flood then have some real fun.

Birds - January 17, 2013, 3:52 am

nVPN and netwire work fine and op you are a skid.

redpois0n - January 17, 2013, 6:53 am

I am pretty sure this is not the VPN's fault. Try without it a quickie then tell us what happened. Then we will know the cause.

.?x? - January 17, 2013, 7:46 am

Without VPN it worked fine.

I will try switching locations..

Stev - January 17, 2013, 7:47 am

Like I replied to your ticket (I think), CryptoCloud VPN works good with NetWire.

It's a bit pricey tho. www.cryptocloud.com

Agent Jacques - January 26, 2013, 3:59 pm

doesnt netwire allow reverse proxies also? just run through tor on top of the vpn if your doing something you shouldnt be, which of course i know no one here does...
