Thread: [Spreading. Where to spread and how to spread?](#)

Claptrap™ - January 19, 2013, 8:22 pm

Does anyone have a method i could try out? I dont want any youtube or torrents because i dont like those methods. So if anyone can help me id appreciate it. Thanks.

Demon_Jester - January 19, 2013, 8:49 pm

make an omegle bot to spam your rat (with executable link) or attach your rat to couple of torrents and upload them.

Racialz - January 19, 2013, 9:53 pm

One of the easiest ways to spread is make a youtube video demonstrating how to use a real program, and then include the download link to your server.

#Skyline - January 19, 2013, 11:12 pm

Hey I'll try give you some idea's on how to spread

Youtube

- First copy a video any where from youtube
- Then upload it, to youtube
- Call it something like a Runescape gold generator
- After you've done that, but your direct link to your virus in the description

Also

You can get a youtube bot to give you views and likes, which i recommend you doing

sethwilliam - January 19, 2013, 11:16 pm

Or you can bind your rat to a picture go into a chat room act all sexy then have ppl pm you and say here's my picture ;) n boom insta slave

back5 - January 20, 2013, 3:08 am

haha all of these say how to spread by youtube and you clearly said that you don't like that method, how I spread is on omegle it takes a little more time for just one victim but it works. I ask them "hey do you want me to show you how to hack webcams? if so add me on facebook" when they reply okay you say oh and you need a computer to do it. if they have a computer they add you on skype then tell them that you use a program called webcamspy or something like that they say oh cool and you send them your RAT. if they dont trust it you say you can even scan it on your antivirus which most people believe you if you convince them enough. I hope that helps :)

apt-get money - January 20, 2013, 3:13 am

Strange method right there.

Well, I spread using ApexDC++. It's a peer to peer network. You just get this little program which renames and copies your file a couple of thousand times. It renames it to the top downloaded files on TPB. You then .rar them all in seperate archives and share them in the network. You gotta leave your PC on the whole day though. If you don't do that you won't have alot of slaves.

Downside of this method is that you'll get a shitload of russian and romenian non english speaking kids. Or well, at least I do.

ahh thank you :) I am trying it now?

I am using it at the moment and I was just wondering if there is a way that I can tell if someone is downloading one of my stubs? and also would this use up a lot of my internet?

logging*machine - January 20, 2013, 8:36 am

Torrents and Java Drive By's always work for me.

Cloud9™ - January 20, 2013, 8:55 am

Java Drive-Bys are a great way to spread.

Check out my signature for more information.

ezeeprofit - January 20, 2013, 1:38 pm

When i use to rat i got a few thousand within 2 days. I created a fb page called abbie deighton is a slut (popular girl near me) then created a jdb very easy i did the lazy long way rather than editing html. I uploaded a video of a girl with blonde hair blurry vid bouncing on cock u never see her face. I then used the clone feature on a jdb similar to the above ^^ then created a free .tk domain called deightonslut.tk then whilst doing this i was adding ppl from my area with a fake profile inviting them to the vid/jdb

Very simple and affective vid method takes no longer than 2hrs and remember sex sells/spreads

Within two days the page had around 5,000 likes and alot if installs

Good luck Ezee
