Thread: [\[Rate\] Rate My Deface Plz \[Rate\]](#)

fibersprite - January 20, 2013, 1:01 am

Please rate this deface page so far.

<http://thelegacyunlocking.uni.me/>

Thanks,
Legacy

KernelMode - January 20, 2013, 1:06 am

Code LegacyHacks@site:~\$ cd /proc/self/enviro
n
Lol'd. That's not a directory.

fibersprite - January 20, 2013, 1:08 am

I know its not a directory its a joke alot of people that host crappy websites dont know that

supracontra - January 20, 2013, 1:13 am

WHY in fuck do you feel the need to have people rate a shitty html page?

Do you even javascript?

Dreadful - January 20, 2013, 1:32 am

Stayed for the music. Good song. :)

Phizo - January 20, 2013, 1:54 am

No, you're just dumb and don't want to admit it.

Arbitrage - January 20, 2013, 2:07 am

Pretty good deface page, and nice music to go along. ;3

SuperSkid - January 20, 2013, 2:22 am

over used java text....
over used background...
and that LegacyHacks@site:~\$ cd /proc/self/enviro EPIC FAIL

i dont like it sorry

darksrc - January 20, 2013, 2:26 am

Its nice. If you could possibly have the "LegacyHacks@site:~\$ " sections just appear rather than be typed out, it would make alot more sense.
Also change "/proc/self/enviro" to "/home/www/public_html/" please

Edit: Another thing, why does the header link to <http://www.basscode.org> ?

SuperSkid - January 20, 2013, 2:28 am

Edit: Another thing, why does the header link to <http://www.basstoad.org> ?
its /proc/self/enviro Remove epic fail that typed by me lawl ???

darksrc - January 20, 2013, 2:30 am

(Jan 20, 2013 03:28 AM)SuperSkid Wrote: [\[CITE\]](#) its /proc/self/enviro Remove epic fail that typed by me lawl ???

Just noticed I copied that. Lul'd
Skids be skidding ;)

SuperSkid - January 20, 2013, 2:31 am

They see me skidding

Theeey hating ?

Timo - January 20, 2013, 5:19 am

This is the shityest page ever seen.
You just grabbed some shit from other pages, and slapped one page together.
Basicly:
Moving backgruond (GIF).
Shitty logo.
Java box.

amus3d - January 20, 2013, 5:30 am

Code root@site:~\$What?

I don't like the 'deface' page, most of it doesn't make sense.

AnonymousPID - January 20, 2013, 5:50 am

it looks nice, but as some people have said yes it could be improved on. it doesn't make sense at all..

VipVince - January 20, 2013, 6:48 am

I facepalmed at:

Quote:cd /proc/self/enviro

Dyck - January 20, 2013, 6:57 am

Honestly? I got bored just watching it, The background looks nice, the logo leading to your site just makes it so easy to be tracked, even if you use an alias.

6/10

engr?ze - January 20, 2013, 7:03 am

[This.](#)

Also, your whole deface is overused.

Dyme - January 20, 2013, 8:08 am

Hey man nic3 deface I just confused. How u root serv3r with those putty b00ter commands??!?!?
Code LegacyHacks@site:~\$ cd /proc/self/environ
LegacyHacks@site:~\$ Determining webserver root...
LegacyHacks@site:~\$ Logging in as root...
LegacyHacks@site:~\$ Username: root
LegacyHacks@site:~\$ Password: **
root@site:~\$ Welcome to Linux!

YuckySchmuck - January 20, 2013, 9:52 am

I can't wait until you actually deface a site. It will be funny.

VipVince - January 20, 2013, 9:54 am

I would feel real silly being a web admin and having my index defaced with this. Not only would it prove I cannot secure my website, but against a guy who achieves root by locating the /proc/self/environ 'directory'.

FireSquid - January 20, 2013, 9:57 am

Its alright. Good music to get along with it as well

7/10

Furloy - January 20, 2013, 1:46 pm

I like the song, bit loud though.
35 characters

RyanC - January 20, 2013, 1:53 pm

Now, what are you using jquery for here?

Some Skid - January 20, 2013, 1:55 pm

cd /proc/self/environ

BRO, DO YOU EVEN LIFT?

Marxist - January 20, 2013, 3:08 pm

When you logged in as root why did your command line not change to "#"

Why did it remain \$?

"rm -rf /" would be cleaner code. Why add the cd and shit it's unneeded.

And if you did, you wouldn't be able to request a service on the server as no daemons would be running after that! The server would be unusable! Which means any https!

Lol'd at the security portion, you probably just watched some youtube video or guide to do some skid shit like SQLi this website.

>welcome to Linux

lol get out.

I won't even touch on the /proc/self/environ

I'd feel shitty that some skid like you "cracked" into my webserver and made it look as if you knew shit about Linux, as if Linux is some hacking platform. You are ignorant to *nix, as well as cracking.

RyanC - January 20, 2013, 4:00 pm

lol get out.

I won't even touch on the /proc/self/envron

I'd feel shitty that some skid like you "cracked" into my webserver and made it look as if you knew shit about Linux, as if Linux is some hacking platform. You are ignorant to *nix, as well as cracking. The irony in this post makes me cringe.

Light Yagami. - January 20, 2013, 5:25 pm

(Jan 20, 2013 02:54 AM)Phizo Wrote: [\[CITE\]](#) No, you're just dumb and don't want to admit it.

I agree with phizo. Lol you can tell by the deface he really thought it was.
