Thread: [\[Python\] MyBB Plugin Scanner v1.0](#)

Dyme - January 20, 2013, 4:14 pm

*This was originally posted on another site; I decided to share it here.

For the past few days I've been working on this tool that will show you if there are any publicly vulnerable plugins on installed on MyBB. It's an extremely simple script, but I decided to make it because I couldn't find a tool like this through Google and it's a nice way to quickly check a MyBB forum. This is my first release of the tool so I'm sure you'll encounter a few bugs here and there. If you come across a bug or a public vulnerable plugin I missed, please feel free to contact me by PM or posting in this thread.

Note that this code may look like a complete mess if you're experienced with programming. I'm sorry for hurting your eyes.

Screen Shot!

gud job dime, this script will halp lots of peple.

I'm probably going to use this script, seriously good job. ;3

/Ninja - January 20, 2013, 5:34 pm

This is sweet man. Great job this will help a lot of members out. I could defiantly use this :D

Evanescence - January 20, 2013, 5:35 pm

Well done Dyme the script is amazing.

FroFro - January 21, 2013, 12:26 pm

When I open it, it just closes again.

Sorry for noobness ?

I had that problem, I was running Windows. Maybe that's the problem. D:

Dyme, fix it. ;3

Sorry for noobness ?Did you read that line ?

if len(sys.argv) != 3: even if python's syntax is horrible, this is understandable.

Because Python is white space sensitive, copying off of HF seems to fuck shit up. Simply just use the pastebin link I've provided and everything will work dandy.

Correct, please make sure you're not just double clicking the program on windows as it does require an argument.
