Thread: [100% Fud! -JDB / Website / Rat / Portforwarding / \[ Java driveby setup Service \]](#)

17ROLL - January 24, 2013, 4:45 am

Hello HackForums!

Welcome to professional Java driveby / RAT setup / Port Forwarding and RAT Consultation thread!

I have already given one free vouch copy, but i decided to give one more to really trusted and HQ person here! I will only give out RS look template and setup because i want you to rate it!

What do i offer?

I'm offering Java driveby setup that is 100% Fud, i will set up any design you would like also will provide any .net or .com domain name and host for your Driveby you require. For those who have no knowledge with Rats i will guide you through any rat you are using explaining every feature it has. I will also port forward for you and send you test slave if needed!

Why to choose my service and not others?

I have been into Driveby's , ratting and all these other fun things for about 5 years now and I'm really Experienced with these kind of stuff and i know what people wanna see to fall for it.

Is this expensive? What is the price?

I have not set the price, we will discuss it and i will try to lower the price as much as possible for you! I can also give a free advise for people with little troubles.

Below you can see an example RuneScape driveby page, this is old style RuneScape look ( Not the oldest but the 2007-2008 as far as i remember ) and it is really good for RS , i can tell it from my personal experience. As you see there are Players Online on the web page design and when someone clicks the "Home" tab it changes to other amount and it makes the web page even more realistic! There are 6 different players online at the moment but i can add more if you think it would be more realistic for you.

I am offering Fud java driveby pages setup for any design you would like, i will provide you with FUD java driveby and will set it up on your host + set your rat and will port forward your ports on your Computer! I also offer FUD crypting sometimes but mostly you will have to have your own crypter for the virus!

Couple of vouches

Thanks 17ROLL hope things go well for you.

Java applet scan report: [Click Here To See The Scan](#)

Yes i know Virustotal distributes sample, this jar has been scanned on virustotal for 8 months + and still had no detections. I also have different JAR that is similar to this one and it has not been scanned on sites that distribute sample so do not worry!
