No, there's not :p If there was this would be a lot more expensive. Check out some other threads, some people sell ComboLists that would work with this.

You sell a config for MBA. I'm saying it would be expensive if the product could make a combolist as well.

I'm aware of Sky's product. This is faster.

Mike Bars - January 25, 2013, 12:05 pm

Revenge - January 25, 2013, 12:06 pm

Vouch for it, you will get accounts using it if you have a combolist, very easy to work.
My computer is acting up atm so I can't post the proof of me getting accounts.

My errors not yet resolved (2nd day). I will post again when I get everything resolved.

No offense Jeffery Dallas, this will be here until it's resolved, I just want to begin cracking with the program I bought.

Nothing works on Windows 8

On Windows 7 it crashes when cracking EUW accounts and it only outputs non-functional accounts.

If everything would work, this would be amazing!

if you don't know why he is having them why would someone wanna buy? if you aren't sure on how to fix them?

Nibbler - January 27, 2013, 2:27 pm

You missed the point.

I keep it here until you fix it, it's just a placeholder so people see that they might get issues if they buy it, I know that you're working on it and so far it looks good, or/and even amazing (if it checks the accounts with this speed)

SkyRider - January 27, 2013, 2:29 pm

Update has been released that's fixed the issue. Restart your client to download it.

Still only getting non working accounts i.e. "Invalid username/password combination. Please try again."

When logging in on website I get "The login servers are currently offline for maintenance, for more information please visit the server status page." Their servers are online. (<http://euw.leagueoflegends.com/service-status>)

EUW Cracking is fixed, that's good :P

It cant be an issue with the servers, my own accounts work but the cracked dont, something is very wrong.

i got like 500+ acc from crack all say "The login servers are currently offline for maintenance, for more information please visit the server status page." too

Exactly, and it's on ALL regions and at the same time you can login with your own accs and service status page claims that everything is working.

Maybe they're implementing some sort of protection because of a change in IPs. I don't know.

Well, you are making a ton of requests from the same IP.. Maybe I should add proxy support.

Shouldnt be the problem, it would not be possible to login with my other accs, and my friend tested several that I also tested and none worked.
