Thread: [Hack Windows XP using Backtrack 5](#)

Bohemia - January 25, 2013, 1:13 pm

Hello HF, I have posted a tutorial of hacking windows XP in the Hackingtutorial section, but I think I shouldve posted it here in the pentesting section. So I request someone who has the privilege to shift the topic here.

Here is the link of the tutorial

Code <https://hackforums.net/showthread.php?tid=3204705>

Thanks.?

You wouldn't happen to have a iso copy of the Windows XP OS you're using would you? I tried getting a few through piratebay, but they all needed serial keys with none in sight.

Just a heads up, discussion of unlicensed software/torrents, etc., is [prohibited](#).

The title should be "Hack Windows XP using Metasploit" since Backtrack can't hack at all. :):)

By Backtrack I meant the OS, the workstation buddy. Also Backtrack is the first choice of every person to use metasploit ?
