Thread: [\[TUT\] How to setup DarkComet RAT 5.3.1 \[TUT\] \(NOOB FRIENDLY WITH PICS\) + DL LINKS](#)

FairTrader - January 28, 2013, 11:11 am

Hello HF, I'm doing this tutorial on how to setup Darkcomet because I have seen many threads, and stuff like that on how to set it up.

Download links:

UPDATED: 11 november 2013

DarkComet 5.3.1: <http://www.mediafire.com/?ctuxdv7l3va9k8k>

No-ip: <http://www.noip.com/downloads.php?page=win>

Step 1: Download the DarkComet folder and extract it to your desktop, just delete the Winrar folder after.

Step 2: Go to <http://noip.com> register a account and log in to it. Then go to "Add a host" under the hostname type anything you want, but you have to remember it, leave the rest as it is and click "Update host".

Step 3: Install no-ip from the link above, open the program and log in with your no-ip account. When you are logged in, go to "Select hosts" and check the box right next to the host you just created, and then click "Save"

Step 3: Open up the DarkComet folder, and open up Darkcomet. In the left corner where it says "Dark-comet RAT" click there and click on "Listen to new port" type "8282" there, and click "listen"

Step 4: Now we are going to setup your RAT/virus that you are going to send to people. First of all click on "Dark-Comet RAT" in the left corner. Then go to "Server module" and then select "Full editor (expert)". Select "Settings_01" in the left corner. Right next to "Process mutex" there should be a button saying "Random" click on that button 5-6 times.

Step 5: Go to "Network settings" and left click on "bonke.no-ip.org" and click on "Delete selected item". Then under "IP/DNS" add your host that you created with no-ip and under "Port:" add "8282" then click on "ADD".

Step 6: Now we are finally done and need to create it, so go to "Stub Finalization" and click "Build The Stub" now save it on your desktop and call it whatever you want. Example "XBOX 360 LIVE CRACKER" or something like that. I will just call my RAT for "Server".

We are now done setting up the RAT ?.

Now we have to portforward the port "8282" before this will work.

Step 1: Go to your start button in the Left corner, if you have windows. And then search for "Run" when you are in the program "Run" type "CMD" and click "OK"

Step 2: Now when "Commandprompt"/"CMD" is open type in "ipconfig", now you got to scroll a bit up, until you find "Standardgateway"

Step 3: Copy that address and paste it in your browser. Then it should ask you for a username, and password. Default username and password is "admin" and "password" but i'm sure you can find your own at "Portforward.com"

Step 4: Now when you are logged in, go find "Port forwarding" and then go to "Add custom rules". Under name type "HFtesting" or whatever you want, under "Start port" type "8282" and under "End Port" type "8282" and the "Protocol" should be "Both" / "UDP and TCP". under "Local IP address, you have to open up "cmd" again and type ipconfig. Then right next to "IPv4-address" there should be some numbers. You have to copy the last number and type that in the "Local IP adress".

Now we are done, congratulations you now got your own RAT, now you just have to send your server to everyone ?.

If you need any help or if youre stuck in some part of this tutorial shoot me a PM.

PongViking - January 28, 2013, 11:13 am

Very nice tutorial mate, and thanks for the link...
I was searching a lot of time to download DC...

FairTrader - January 28, 2013, 11:51 am

No problem, hope you can use this :)

splinterfire - January 28, 2013, 11:56 am

Great post pretty much got it all setup, thanks for the guide.

FairTrader - January 28, 2013, 11:57 am

No problem, hope some more people will see it :)
keep this thread alive.

-Awus- - January 29, 2013, 8:12 am

bookmarked mate thanks. do you mind PM me because i dont know how to test if it works?

FairTrader - January 29, 2013, 8:48 am

Awus you could try it on yourself, or then try to infect someone.
Feel free to send me a PM if you need help.

doedy - January 29, 2013, 2:57 pm

How can you test without infecting yourself

Modie - January 29, 2013, 3:00 pm

nice TUT man ,

and for starter users who don't know much about port forward
if you can't open port forward you have to use VPN like HMA or any free stuff that have port forward

or look here <http://portforward.com> it good site for teach you how to portforward as well
hope it useful
cheers

FairTrader - January 30, 2013, 12:42 am

(Jan 29, 2013 03:57 PM)doedy Wrote: [\[CITE\]](#) How can you test without infecting yourself
You can try crypt it, and try it on a slave or something like that.

(Jan 29, 2013 04:00 PM)Modie Wrote: [\[CITE\]](#) nice TUT man ,

Thanks and I will say nVpn is the best out there, to stuff like this.

-Awus- - January 30, 2013, 6:25 am

thanks mate! helped me out a lot for nothing, helped me do the whole rat set up!

FairTrader - January 30, 2013, 6:26 am

No problem, feel free to PM me if you want some help.

daynababey - January 30, 2013, 6:50 am

I followed this tutorial very carefully, i checked that i port forwarded properly on canyouseeme.org
and it was a success, however when i try to open my server it will not find me, any idea's?

FairTrader - January 30, 2013, 7:00 am

PM me your skype and I will try help you.

Palx - February 9, 2013, 2:41 am

Thanks, very good guide man.

But sometimes it doesnt work when I shut down my PC? is it normal?or should I setup everything
again?

Lillys - February 9, 2013, 3:08 am

Cheers this is helping me a lot, I tested it out on a mate and its working fine for now so thanks :)

FairTrader - February 9, 2013, 3:48 am

When you shutdown your pc then just open NO-IP and DarkComet and your slaves should pop up
again, unless your server is not FUD and they have detected it.

Ardi22 - February 9, 2013, 4:33 am

Awesome tut, this is amazing
Thanks so much

FairTrader - February 9, 2013, 4:53 am

Thanks for the words, hope this will help out some more people.

DeimosDizz - February 9, 2013, 5:26 am

Wait, when you set it up wouldn't it be safer if you used a vpn? What's the risk of an infected person

finding your IP if you simply run it off of your PC with a fud crypter?

FairTrader - February 9, 2013, 5:34 am

If you are using vpn I would tell you to buy nVpn or #.net's vpn 2 best out there.

DeimosDizz - February 9, 2013, 5:39 am

(Feb 9, 2013 06:34 AM)Theo walcott Wrote: [\[CITE\]](#) If you are using vpn I would tell you to buy nVpn or #.net's vpn 2 best out there.

What is the risk of getting caught without a vpn though? Is it significant enough to warrant the use of a paid vpn?

Arbitrage - February 9, 2013, 6:12 am

Very nice tutorial, thanks for posting! :3

FairTrader - February 9, 2013, 6:31 am

Thanks, and if you are using VPN you will not get caught by the cops if it should happen but it never really does.

DeimosDizz - February 9, 2013, 7:56 am

(Feb 9, 2013 07:31 AM)Theo walcott Wrote: [\[CITE\]](#) Thanks, and if you are using VPN you will not get caught by the cops if it should happen but it never really does.

Thanks for the reply. Thanks for the tutorial as well. It helped clear some things up for me.

Unacknowledged - February 9, 2013, 8:01 am

This tutorial has already been released in premium tutorials section, but thanks for showing this to the public!

FairTrader - February 9, 2013, 8:18 am

I know there is many tutorials out there with DarkComet but it will not harm with another one.

cimmer - February 11, 2013, 7:39 am

Hey, I was wondering if you could help me out? The power went off at our house today, and that somehow restarted the router. I am just wondering if I could get back all my other slaves, or if I have to set it all up again?

FairTrader - February 11, 2013, 7:45 am

I think you will get your slaves automatically back you just have to connect to your No-ip and then they should come back.

cimmer - February 11, 2013, 9:30 am

I am not exactly sure how to do that. Can you be more specific?

H4CKDETRiiZO - February 11, 2013, 11:23 am

Very nice, thanks, i test that now ! Thanks bro !

FairTrader - February 11, 2013, 11:57 am

No problem, if you get any problems then just send me a PM.

WhiteBear - March 13, 2013, 3:36 pm

I did everything the guide said when i clicked on my own server it didn't show up on the users, so it cant be working.

Obi-Wan Cannabis - March 13, 2013, 4:08 pm

Bookmarked this for future reference. Thanks mate.

FairTrader - March 14, 2013, 6:11 am

No problem if you need any help just send me a PM.

Cha0 - March 14, 2013, 6:13 am

Pretty nice tutorial but don't we have enough guides on how to set up Darkcomet?

FairTrader - March 14, 2013, 6:34 am

Yeah I think we have many of these tutorials but I was bored when I made it.

Ecatel - March 14, 2013, 9:30 am

This tutorial is great, i've used dark comet so many times and its a easy setup. To bad he doesn't code anymore :(

macelord - March 14, 2013, 4:08 pm

great tutorial, 1 question if the slave restart his pc you lose access on him right? cause we tested with one guy without stable ip and we lost connection after he restarted

Rasperdub - March 14, 2013, 9:52 pm

great TUT but whats different between DC and CyberGate? Is DC better in any way?

FairTrader - March 15, 2013, 3:43 am

My opinion is that DC are better than CyberGate because it has way more features.

Rasperdub - March 15, 2013, 11:34 pm

Ill have to give dc a try but since I switched isp,s im having trouble with port forwarding also I use a wireless g router flashed with ddwrt that I use as a repeater and im having trouble with having to go through that and my wireless n router. So I got some experimenting to do unless someone has any ideas

AxeExe - March 16, 2013, 5:45 am

Thanks mate ! I've been looking for that :)

johnwillmikul - March 16, 2013, 8:37 am

I loved the tut, but nothing is working for me :(I port-forwarded and did everything you told me to do, but even when I try it on myself. it doesn't show up in the users area. I set the client password correctly and everything, but nothing is working. Using port 8282, and checking www.canyouseeme.org saying the port was open. I had 30 downloads of my rat when I put it up a half our ago, but no users. Could you help me? Thanks man :). Oh, and do I have to turn off my router's firewall?

nickyrich9 - March 16, 2013, 9:31 am

Very helpfull thank you for adding this

Proxseas - March 16, 2013, 9:32 am

Dc is probaly the most easy RAT to use, i recommend it even how expert you are:p

solopro7 - March 16, 2013, 12:32 pm

hey mann great tutorial im stoke at the port forwarding section my thing is totally different if someone could give me a hand that be nice message me please

GREAT TUTORIAL

Khoshi - March 16, 2013, 12:33 pm

Great post pretty much got it all setup, thanks for the guide.

FairTrader - March 16, 2013, 7:21 pm

If you need help just PM me with the problem and a screenshot.

BlueExploit - March 16, 2013, 7:41 pm

great tutorial thanks been trying to get this to work for a long time

gizmoguy - March 17, 2013, 12:47 am

Alright im at a bit of a lost i port forwarded checked the ports did everything teice just to make sure all firewalls are off no vpn even turned router firewall of but there is still no one showing up in my users :(ive never been able to get a rat working for some reason :(

star1234 - March 17, 2013, 1:36 am

Does Darkcomet bypassing antivirus softwares etc??

?Schock - March 17, 2013, 2:29 am

nope you need a crypter or else it will be detected.

FairTrader - March 17, 2013, 6:58 am

Its probably because your file is not crypted, you can get your file crypted for like 1\$ in the service section.

gizmoguy - March 17, 2013, 7:47 am

Can anyone help? ./ as could it be my router? i havnt tried it outside of my local network but i have tried it on other computers on my network.

FairTrader - March 17, 2013, 8:11 am

Try ratting yourself and tell me if you show up or not.

gizmoguy - March 17, 2013, 10:37 am

i tried but no cigar :O didnt show up..im running win8 btw if that helps

FairTrader - March 17, 2013, 10:56 am

I don't know if it works on win8 have never tried.

gizmoguy - March 17, 2013, 11:00 am

grr alright thx for the help :P ill keep trying

lun471k - March 17, 2013, 7:35 pm

Hi,

It does work on Windows 8. I was able to RAT my 4 PCs all weekend long and they were showing up.

Sadly, it seems like No-IP is failing tonight or something is going wrong because my client won't see my servers anymore.

Penguana - March 17, 2013, 7:39 pm

Im new here, what exactly is a RAT? Please and thanks.. sorry if I sound stupid.. lol

FairTrader - March 18, 2013, 3:38 am

Its a program where you can make a virus so when you send it to people you have full access to

their computer.

gizmoguy - March 18, 2013, 1:26 pm

(Mar 17, 2013 07:35 PM)lun471k Wrote: [\[CITE\]](#) Hi,

i think its no ip as well is there any alternatives?

lun471k - March 18, 2013, 3:42 pm

(Mar 18, 2013 01:26 PM)gizmoguy Wrote: [\[CITE\]](#) i think its no ip as well is there any alternatives?

I am using FreeDNS right now and it works really well, although the support for proxies and VPN IPs might be limited by the fact that it doesn't seem to refresh the IP.

Edit: FreeDNS has a dynamic DNS updater program. Just what we need!

Syntak - March 19, 2013, 12:55 am

thanks i'm going to try this later on

SourMan - April 16, 2013, 4:32 pm

Thanks man i set everything up but im having trouble with it still, idk why, is it possible that you add my skype? Mareil.Mansour <-- ! THANKS A LOT IN ADVANCE!?

Omg it worked! the problem i had was that the person i was trying to infect had his anti virus on, the file needs to be crypted in order for you to infect someone

cue0701 - April 27, 2013, 9:52 pm

Wtf seriously pissed off it keeps saying when I do port 8282 it keeps saying "conflicting port with darkcomet" wtf

subbacool - April 28, 2013, 1:11 am

Bro there is not option of module in my DC. please help

I have no option of Module in my DC.

Dosh - April 28, 2013, 2:57 am

Nice tut man thanks really helped !

TheHax - April 29, 2013, 6:49 am

Thanks for the tutorial. But I have a problem !

I did all the steps and I opened my R.A.T. on my computer, I'm infected (I can't open the task manager), but I'm not in the Users list then I can't remove MY virus haha... can anyone help me ?

I tried with the 8282 and 1604 ports.

<https://puu.sh/2Js0j.png>

<https://puu.sh/2Js1d.png>

EDIT: I replace my no-ip dns with 127.0.0.1 and it works, the virus is apparently removed. Is no-ip the responsible ? Or I simply can't infect my PC with no-ip ?

Assailant - April 29, 2013, 11:21 am

I need help port forwarding my router.. if anyone can help PM me.

I know how to do it lol, but it's just not working on my router for some weird reason (Virgin Media Super Hub)

- Thanks =]

Frequnn-See - *April 29, 2013, 11:38 am*

pretty good tutorial, very noob friendly :P

FairTrader - *November 18, 2013, 10:16 am*

Updated this tutorial with new download links :)

If you need any help send me a PM with the problem and i'll try help you.

kaliowned97 - *November 12, 2015, 2:16 am*

Great job on the tutorial!
