Quote:So what is it about ?

This will be your main friend with facebook marketing :

the idea is to add friends so how to do it ?

- add suggested friends
- upload an email list

Well there's other ways i'm sure of it but these two methods are working right now so here they are !

Features :

You can create an INFINITE number of mails

add friends directly by clicking on the button

can add all the friends of a person like a celebrity

can generate a specific number of email addresses

no dependencies

Since it's coded in autoit there is no dependencies ;)
you can basically make it run on any windows system
