Does it work with some other site?

Hawk Supply Co. - February 27, 2013, 11:33 am

They have a new site not sure if the exploit still works.

I did this when it was up before.

Just search the URL up there with out the co.uk and it should be the first one up on google.

Seems very interesting, but to good to be true..

Anyone tried?

CheatEngine contains a win32/opencandy , not sure if it is dangerous.

Second, should be idiot, to share this method for free, so it's just scamming. It's what I think.

colalime - February 27, 2013, 12:38 pm

Yeah can't imagine this really works, which idiot would share this? Because then it will get detected..

Ermagerd Norton lit up?

Yeah, OpenCandy is an advertising platform. You can run it commandline with parameter /nocandy if you don't want to have to click through prompts asking you to install adware.
