Has been tested on the following so far, keep in mind that it will work with pretty much everything that is not .NET

Dark Comet
Cerberus
DaRKDDoSeR
Host Booter XR
Solitude
CyberGate
Andromeda
IP Killer
Netwire RAT
BlackShades
Athena
BitBot
Betabot
Athena HTTP
Fenix IRC Bot - New!

Better yet it will work on everything and anything but .NET and files that require EOF!

HWID changes are $5. (Does not apply for 1 week subscriptions)

Support for 1 week subscriptions is nonexistent

Yes, limited copies are going to be sold. Plus your going to get your custom stub 4/stubs a month.

Where is the option to select stub in the crypter then ?

I like the idea of limited copies but who can prove me that it's true ?

I want a no dependencies crypter since .net are not as good as this with

a lot of errors

The screenshots are a bit outdated (will have a more up to date design soon), the only thing that has changed is that the custom stub option has been added to the main tab.

Well, there's no way to know that it's limited, chance you have to take I guess.
The stubs sent are different for every customer.

This crypter is a native crypter with no dependencies.

It all depends how you spread every user gets different FUD times. You should get passed 2 days tho but again depends how user spreads.

JiiN - *February 6, 2013, 3:46 pm*

Well I spread by torrent, if the FUD time is only 2 days and I have 4 stubs per month it's not a lot

Executing itself can give some bad detections at runtime.

The crypter it self bypasses it the proactives, keep in mind this greatly depends on the files you are crypting.

I tested it on hostbooter and it bypassed sonar.

How often you update stubs, if they are detected?
i need monthly package with usg or with unlimited stubs for spreading?
have you tested it with zeus?

pls turn off all your antimalware to avoid "accidental" distribution because almost all antivirs submits md5 hash of all files they scan to company and if its new and many users have it, probably will submit whole file (stub, your server etc)

Your crypter looks very nice. I tested free Absolute Crypter v1.2 to check complatible with my file. When I run my output test crypted file I get message box to confirm admin privigles.

My program steps:
1. I run TEST.exe
2. TEST.exe copy to C:\Users\MyUserName\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup as update64.exe
3. Close TEST.exe.
4. Running is only update64.exe from autostart directory.

When I run NON-crypted file I don't get any messagebox, but when I crypted - I get messagebox...

I'll buy your crypter, but is possible to don't show any messages?

Most likely because your file name contains "update", certain file names "setup.exe" etc are automatically run as admin.

Change your installation name to something else.

I can vouch it bypasses MBAM Pro (latest db update). I just ran my crypted server with MBAM Filesystem Protection on and it didn't detect it. Quick scan didn't detect it, either. I've been running a full scan for 10 minutes with nothing. I'll update when it's done scanning.

Edit: Full scan is done. Nothing detected.

.net support = use runpe to create a .net process. we are not gonna add runpe just to support .net files. ?

Using runpe lowers the execution rate. If your file is coded in .net there are plenty of crypters in hack forums that support .net files.

You can crypt as many servers as you want. You get 4 stubs per month. You can buy stubs after your 4, though. A stub is only $5, I believe.

Nope. Read MARVID's post above:
Quote:Regular updating. Plus, they're customs stubs (your stubs aren't shared with anyone else). If your stub gets detected, you get a new one within 4 hours. You get four stubs per month. Every stub after that is $5.
You get a new stub within 4 hours of a detection (you PM him or tell him on Skype that you got a detection). You can request a new FUD stub at almost any given time (as long as ptwist is online/awake) and as many times as you need (4 free stubs per month, $5 per subsequent stub).
Considering all you're getting, the price is crazy cheap.

VocalX

Oh i got it, alright thanks for helping now im going to buy it lol, any ideas how long does it stay fully undetected?

satryiasis - *February 27, 2013, 4:40 pm*
so because they're custom that means these stubs have longer FUD time? How much longer are we talking about compared to crypters that use public stubs? Average? I wouldn't like if my stub became not-FUD after 3 days or so...
I ask because I mostly spread files which are <5mb so that means ppl will probably scan on VT and similar sites, which kills FUD time pretty fast I suppose.
So I would need something that gets updated a lot more? Like crypters with normal stubs that get updated for free a lot more?

MARVID - *February 27, 2013, 4:46 pm*

Truly depends where and how you spread could be anywhere from 2-7 days.

Awesome!
I'm not a mass spreader, so it stays pretty long for me. My record was ~13 days. :D
As long as you do not share your stubs with anyone, scan on VirusTotal/Jotti/NoVirusThanks, etc., you'll be fine. Use ElementScanner, RazorScanner, BlackShades scanner, or Scan4You.

Of course not, beta version is done. It will no longer be updated it's only there so you can see that it doesn't corrupt your file. The private version is fud.

The crypter is indeed working with netwire make sure you have ports forward and that the uncrypted file connects to you before trying the crypted file.

Think you need to wait since they have no time for providing private crypts anymore they say so everyone will have to share the same which means no FUD (at least not after a couple of hours)....I smell....EOL soon....damn I always seem to purchase things that goes down less than a week after purchase and never worked as described (the "FUD" stub was 5/35), good luck anyway

You will receive an FUD update today if your getting 5/35 your using an old stub the current one is 1/35 which will get updated today. You should add me on skype to be more updated. As for the private stubs we are working on it again they are not gone they will come back.

I want to inform Absolute costumers that there will be a delay on private stubs. Since twist and I have been working on the USG for the crypter and extra week will be added for the down time of the stubs. And I have been busy with law school. College is more important to me than a crypter. This does not mean you won't be able to use the crypter you can message me for a shared stub. Just won't last as long.

Does this use one Stub for all customers ? or is every build unique ? and does this bypass kis / sonar and proactives in runtime?

No it is not one stub for all customers. The stubs are pseudo unique. Yes it does bypass proactives, I have videos on the thread showing it bypassing Norton and Pure (KIS). ?

FUD :)

zalamanderz - *March 29, 2013, 11:54 pm*

I received around 4-5 stubs (since they weren't FUD) but the last one was perfectly and 100% FUD.

I recommend this crypter especially, and not least, due to their (MARVID helped me) extraordinary support. He continue to send me new stubs until I finally got one that were stub. He (MARVID) replied to my PM's directly and did all he could in order to help me getting a FUD stub.

You mentioned semi-unique stubs, is this the same concept you started out with or a necessary compromise due to having less time than prior?

Very interested in your Crypter, it sounds very promising. Do you require the Paypal-account to be hooked up to a credit card or does a standard bank account suffice??

If you go to the website and lets you buy it. You can pay with what ever if you pay with an echeck you have to wait till it clears.

I can vouch for this Absolute Crypter. I have experimented with many paid and free Crypters. Honestly nothing works as good as Absolute Crypter. It is easy to use and it works. I am very happy with the product and the support is one of the best. I have contacted support number of time and the support was excellent. I love the chat and teamviewer suport. I would strongly recomment Absolute Crypter.

This crypter is really great. The execution rate is very good and it's FUD. One of the best things is the stub. It is very small not like most of the other crypters.

This crypter really needs the auto update feature.

This should be a high priority, also it will make your life alot easier. Or at the minimum setup a website with the stubs in it, that way we can all download the latest and greatest ourselves as needed. This wouldn't even need a password or login because without the crypter the stubs are useless. If you paranoid about av companies getting the stubs add the stubs to a password protected rar file and pm all of the customers the pass.

Keep the pass the same always and you are good.

Marvid, I missed you bro. Got banned for 3 days and it messed up my plans. Just coming in this thread to let you know that you're still awesome ;) PMing you for new stub.

Also, quick Q:

- How often do new stubs stay undetected?
- What happens when I infect a slave with a rat after a week (when stub is most likely detected)? Do I have to keep reinfecting them with the new stub or does the RAT hide itself good enough from the AV once it's in the slave's PC?

Stubs don't stay undetected much I am not going to lie, me and twist are going to fix that. Very soon.

You must update the slave if you want to keep him.

Any ETA on new update for Stub ? :) Waiting for it to re-release my bin FUD again

@Mar can you pretty please directly PM me the new stub as soon as available ? As you know my reasons for waiting for it so much, its night here and I am going to sleep and when I will wake up in morning you will probably be sleeping due to timezone diff

I really need the new stub before 9AM according to my timezone to release the bin with game release (its tomorrow)

I will vouch again for this crypter as it really has rather long FUD times ?
With nearly every other crypter on HF I never had more than 2 hours of it being completely FUD ?

hi i sent you a pm with payment details thanks

Guys, please remember, DO NOT SCAN with Antivirus programs like AVG / Kaspersky. Instead:

Only scan on the following websites!!
elementscanner.com
scan4you.net
chk4me.com
razorscanner.com

Not following this rule can end up getting you banned (from the Crypter). It'll be FUD much longer if we all follow this simple rule.

Dark Comet
Cerberus
DaRKDDoSeR
Host Booter XR
Solitude
CyberGate
Andromeda
IP Killer
Netwire RAT
BlackShades
Athena
BitBot - New!
Betabot
Athena HTTP
Better yet it will work on everything and anything but .NET

From now on HWID changes are $10.

1. Can't speak for fud times. 1-7 days honestly it depends.
2. How many you wish to do.
3. No, I release multiple stubs.

The link was censored because it was flagged as malicious (for selling a crypter used to secure files from being found by AntiViruses) so Omni did that to assure HF doesn't get looked at as linking to malware.

Yes, but it's completely reasonable IMHO that an antivirus company would flag someone's software website advertising a product made to DISABLE their product made to protect people.

Hello i am looking for a new crypter, i tried few.. but they wasn't that good. Is your crypter still FUD and working with BS?

Vortex™ - *May 10, 2013, 10:46 am*

Absolute Crypter is currently Fully Undetectable(FUD) by all Antivirus solutions. Not only is it FUD on scantime but runtime as well of your crypted file. Remember Absolute Crypter has NO DEPENDENCIES so that means it will not rely on any resources. If you care for a demonstration of any antivirus of your choice i can demonstrate Run/Scan-time FUD.

Ever since they moved on to "automatic" updates I have not be able to make any FUD but more like 4/34, 5/34 and so on, BUT I am not worried that it won't be fixed because ever since I purchased this MARVID had offered such a great support, a support you won't be given even for a $1000 program so big thumbs up for that!

What are crypting and cloning? You shouldn't get panda.

I tested, betabot, AthenaIRC, AthenaHTTP, darkcomet and netwire before I uploaded the stubs all came back FUD. Anyways message me on skype if cloning something else doesn't help, I will give you something to try.

No, not the newest update. I was referring to the old stubs. The newest one works fine.

I'm using Athena IRC and Fenix with no Issues.

I'm about to get this Crypter but I hope they do keep the decent updates daily/weekly.
I can't say no to this when I see all the vouches and once I test that I will tell the other folks like me about my own experience.

Now, look forward to buying it since LR is gone lol
Hi,
I just made the payment through your website but it redirected me back to PayPal account.

What should I do now?

The crypter is not breaking betabot. I tested it yesterday. So I know for sure its not breaking it.

Can't help but post saying how down to Earth and genuinely helpful Marvid is. I've noticed he isn't like other users on this forum who are selling products. Once he has your money, he doesn't screw you over by ignoring you. So many times when I've had trouble, I've hopped on Skype and chatted with Marvid and he's gone above and beyond his duty to help me out as much as he can.

Can't say the same for some other people who I've bought stuff from, sadly. As soon as they've got my money in their pockets, they do their best to avoid helping me haha

So cheers Marvid, for being an absolute bro!

When you had absolute you had it at the beginning there were a lot of issues to address.

Good rates with betabot. And when you bought it, We were getting 4 days - 1 week FUD time not sure why your saying it was "less then a day" look at the beginning of the thread around the time your first posts happened. There are some monitor scans there.

JiiN - *June 4, 2013, 8:38 am*
There are issues that's true and true too that it have 2-3 days FUD time, I didn't remember.

I just heard that now the FUD time isn't really good, is it more than 2-3 days ?

He hopped on teamviewer and helped me out within minutes of me sending the PM, Did everything e could to help and in the end it was just me not reading the settings correctly. Now its a great crypter and its FUD literally everday.

Big vouch for this amazing crypter.

Hey guys looks like the scanners are down, even tho, razorscanner, scan4you, agonyscanner and elementscanner show its FUD I can't relay on it because an uncrypted file shows fud also, We did our best to kinda guess on it. So do not relay on this till later when the scanners are back online. I have work in 30 mins so I won't be able to fix it till tomorrow. This is what it shows have no idea weather is accurate or not. Download if you wish to or not. Just check for updates.

Let me guess, you or your friend got FUD results after update, then 3-4 hours later got x(x)/47 detections? ?

I'm not having any troubles with this, and I don't regret It.

Marvid Is good with updates, give him a bit.

If his friend doesn't like the product he can take up with me. Not sure why he is posting if he doesn't even own it. I find it funny that just a couple days ago he was asking for a discount.

I hope you where referring to his friend scanning on virus total and not you. ?

Remember to always & only scan on elementscanner.com , razorscanner.com , scan4you.net & agonyscanner.com

Note to everyone; We might close down Absolute for 1-2 weeks and recode the whole crypter and get 4+ days of undetectable time again. Obviously the time that the crypter is down it wouldn't count towards your license. And at the end you would get 1 week of extra time. We are going to do some changes to our stubs if the doesn't help a recode will be needed. ?

We release a little update which should hold till tomorrow when the update is due.

Yes I was referring to him, I am not a dumb ass and have a Razor Scanner monthly subscription ?

Please tell me If this Is confirmed or not a bit before you close It down, because I will need to look elsewhere for that 1-2 weeks and don't want to be blindsided by It shutting down.

Vouch for Absolute Crypter, looking forward to the new things MARVID wants to try to improve the crypter always A+ mate.

ViRuS_DanGeR - *June 12, 2013, 3:01 am*

bought yesterday Absolute Crypter,I will wait for new updates! nice to deal with,all explained quickly received,Thanks MARVID good luck in selling and updates! ??

MARVID - *June 12, 2013, 2:31 pm*

Attention!
The time has sadly come, a recode needs to be done, in order to do this we must shut down Absolute for 1 week 2 weeks MAX, the however does NOT mean the project is going to end in any shape of form. The crypter should come back with longer fud time then ever before! Please be patient with us. Extra time will be added to each and every one of you, plus the time the crypter is down it will not count towards your license. We appreciate having you as a costumer and hope you stay with us. We will try to get this done as fast a possible thanks and hope you understand. Recoding of the crypter has already started. Tomorrow I might release a simple stub update even tho I am not sure about this. We will see until then, if you have any questions or concerns please pm or or add me on skype "marvidrunzthis" or jabber "absolute@exploit.im"

Also to the people using NGR IRC bot message me.

Need to ask you something.

Closing this down so every one will be able to see. Will reopen when the recoding is done.

MARVID - *June 25, 2013, 11:20 am*

Recoding of the crypter is done. Scanner will be added within one week and all sales have resumed. Thanks for waiting and those who charged backed you all have been banned.

You may check for updates.

Private copies? No. A crypter can be coded for you and you only. For price PM for more info.

Let me guess? CryptMe? (No harm intended)

We update crypter pretty quickly after a detection as you can read from the comments on the thread everything is going fine the way we currently run the crypter.
Hey guys I am going to be a little slow activating since I am out out town please hold on my partner will get to you.

Looks amazing! :D I wanna get it. Can you lower the prices a bit and maybe offer a lifetime plan? You would get alot more buyers. Also i don't think a virus scan for a crypter would help, it is a crypter. Haha.

are you planning to reduce stub size? 400kb is too much.
execution rate of crypted files is extremely low. On several machines process just takes 100% of CPU time.

crypter performed much better before recoding...

The only thing that went up was stub size since Delphi is now used along with C++ stubs. Execution is the same. I tested 5,000 got 4,500+ that is 90%+ execution rate, also feel to go with an AutoIT crypter and get a 1.5mb stub. I am not stopping you. As for the CPU performance not the crypter that's causing that its your shitty bot. I heavily tested it before the recoding. Stop spreading bullshit that's going to get you banned.

This crypter is just unbelievably godly. I don't even know where to begin. For one the salespeople are great and are easy to talk to and get along with. MARVID is a huge boss.
It's FUD for a long time. And overall its just perfect I really could not have asked for anything better.
I would recommend this to everyone.

blackopec12 - *July 8, 2013, 8:51 am*

Absolute crypter works very well and marvid is very patient when it comes to questions pertaining to his software.
I recommend this crypter to anyone looking for a solid crypter that doesn't have any dependencies. marvid makes sure to reFUD his stub if there is ever more than 2 detections.

Simple, fast, Clean, efficient.

You think the price is high? You made my day. ?

Try and stick your head out of HF every once in a while.

I know some people who pay $300 week for a crypting service not even a crypter on a private forums.
Also guys, go ahead and check for updates.

Banned some people and changed the scanner color so its easier to see.

You must use the scanner along with the new builder if not it won't match encryption keys and it will crash and not run.

And as always its FUD!

You can bind it will a .pdf or .jpg, change the icon and spoof the extension but it will aways be either a .exe, .scr, .com, .pif or .bat.

What are the advantages compared to file protector?

Umm for starters Absolute is not back doored like file protector.

How often are the stubs updated?

When the need be.

Do I accept paysafecard?

No, go here to exchange it to BTC.

How well does the crypter handle multiple files being run as well as multiple startups? I've recently tried a couple crypters that seem to fail in these regards. My only guess is that it has to do with injection methods or they are trying to access the same protected windows files to hide in.

I need a crypter that will allow me to have multiple files running at the same time - would this accomplish that?

You mean like binding multiple files at once? At the time being you can only bind 1 file per crypt. If your looking for a multiple file binder check out Data Protector.

If you mean that you currently have multiple files running at startup and was wondering if it would affect the crypted file. No it will not at least it should not.

If I did not answer your question let me know. And rephrase it for me. English is not my first language its my third. So excuse me.

Are you asking the following?:

"If multiple files are crypted (e.g. a RAT and a miner) and both are added to startup, will both files still execute on startup or will only the first execute?"

Is that what you were asking?

oMiNouSWaNDeReR - *July 13, 2013, 9:30 pm*
Yeah I don't need it to be a binder I simply need it to be able to handle multiple startup files and I can run them each individually (or drop them into the startup folder).

The reason being is I typically use multiple RAT's since I haven't found a RAT that does everything I'm looking for.

Currently using:
Blackshades as the main install since its simple and stable.
Cybergate Excel for viewing files since it has great thumbnail support and file viewer.
DarkComet for password recovery- blackshades and cybergate excel still have issues with password recovery
Cammy for viewing webcams- since every other rat's webcam viewer is in the stoneage comparatively.

Unfortunately that creates a pain in the butt having 4 different files- having a crypter that can easily have all 4 installed without issues is what I'm really looking for. Either that or a RAT that actually has all the features I need.

Blackshades stable? I laughed.

Check out netwire. Amazing rat.

Anyways, You should not have a problem with Absolute!

oMiNouSWaNDeReR - *July 13, 2013, 9:51 pm*

Well it's stable in the sense that the installs typically stick. I don't use it for anything other than just establishing the initial connection and then installing the other servers. I checked out NetWire but it's lacking a lot of features I find useful so even though it might be more stable than BS it still won't let me use just a single RAT, I'll still have to use cybergate and cammy.

Either way, thanks for the response! I'm going to figure out what direction I'm going to go but it sounds like a pretty awesome crypter either way.

Probably the best crypter here. Always gets updated and Marvid always helps you if you have problems. I highly suggesy people to buy this crypter.

Posting another vouch, FUD time seems longer these last few updates.

Keep It up :)

MARVID - *July 18, 2013, 9:50 am*
Like I said, a builder update would be released today. (Changed encryption on stubs) New builder will only work with new stubs. So the people who charged back won't be able to use it anymore.

Like always FUD.

Absolute does NOT work with imminent monitor due to the fact that Imminent is coded in VB.NET. It is stated on the main thread that this crypter will not work with .NET files.

detodo - *July 27, 2013, 7:44 am*
This crypter is to be used with either andromeda, betabot or Athena.
I mean this is mainly good for c++ programs basically.

About spreading thats for .net crypters with obfuscate functions etc 'cause it takes more time to be detected than c++.

So to all of you who is using this crypter to spread you guys are wrong and only making yourselfs to lose bots.
Just use another crypter if you want to spread your rat/keylogger and this one to update your bots in order to retain them in your rat.

These are the basics.

Question how stupid can you be? Do you know how hard is to maintain a C++ crypter on HF? Actually any crypter for that matter on HF is hard but especially a native language like c++. Those crypter that you see saying "2 weeks FUD" are coded in AutoIT you can't compare them and that's only for initial release. If they where coded in c++ they wouldn't even last a few hours (xProtect) So yea shut your mouth if you don't know what your talking about.

Update was 2 days ago, and not 6/35 for me. Perhaps your not cloning but it is 2/35 for me it's eset which is normal for it to be the first thing to be detect with any crypter and MS Essentials which is a first for me. Which will be fixed today or do you want me to wait 5 days to fix a detection like most crypters here anyways?

I mean; You don't like it? Find something else, it's rather simple really.

Have a nice day.

If they where coded in c++ they wouldn't even last a few hours (xProtect) So yea shut your mouth if you don't know what your talking about.

Update was 2 days ago, and not 6/35 for me. Perhaps your not cloning but it is 2/35 for me it's eset which is normal for it to be the first thing to be detect with any crypter and MS Essentials which is a first for me. Which will be fixed today or do you want me to wait 5 days to fix a detection like most crypters here anyways?

I mean; You don't like it? Find something else, it's rather simple really.

Have a nice day.
Very nice attitude to a costumer.
Calling me stupid because of that?
Wish I wouldn't have buy this. Unbelievable ...

Just wanted to say, there IS NO such crypter as ABSOLUTE CRYPTER on hackforums or anywhere. I don't want to offend anyone but I can truly say that, at least, the other crypters as hackforums.net sucks big time. They ARE NOT FUD, they DO NOT UPDATE, the DO NOT OFFER SUPPORT..No I am not a sponsor nor an affiliate, but their (MARVID) support is out of the ordinary. So it is simple IF:

1. You want 100% FUD....
2. You want support 365 days/yr...

Then order Absolute Crypter!

No, your not allowed to herd bots or mass spread of any kind. If you buy and caught you will be banned and your license will be terminated.

I honestly don't know why people even think of buying $20-25 dollar a month crypters for herding bots makes no sense.

With all your respect if you want to herd bots you'll need to find something else. I know people that pay $250+ a week just for a service.

I mean you can always go with those crypters that pop out every other day or so and be done with it since they are just going to last 2-3 weeks but no one serious will let you herd bots for $25 a month.

I can do pseudo unique, it might last longer it might not, but I won't do a true private stub. That just's takes time unless your willing to pay $xx.xx amount of money.

Yea I know, It should only cost $5-$10 a month so there are only 1k+ customers so the stub lasts at least 47 minutes after an update comes out before getting detected. This also should be In Autoit, because If the size Isn't big, It sucks. Now that would be a solid product.

This is indeed a awesome crypter, for this price.

But sometimes my file is 1/35 by NOD32 or MS SE. Not a big deal though.. @Marvid: hit me up with private stub price. :)

You shouldn't get detections update was today is this still happening? If so what file are you crypting I'll look into it.

Yeah keep it up Marvid FUD like always.
This coder cares about costumers.
This c++ crypter is really the best no dependencies crypter in here.

I think Marvid does a wonderfull job, c++ is hard and this crypter does bypass all av's with no problems.

Highschool - *August 14, 2013, 7:31 pm*
Vouch for my buddy Marvid he knows exactly what he's doing.

Jekyle - *August 15, 2013, 1:55 pm*
So I have had some time with this now to give a BIG Vouch for this. The purchase / Activation process was very fast and I was using it in no time at all. Once using the crypter a few times It crossed my mind that this just may be the most user friendly crypter I have ever used. The crypters layout is great and there are not allot of confusing and unnecessary features (great for n00bs) but all the essentials to do what its created to do..create a FUD output, and that it does!!! Marvid keeps it very well maintained and updated frequently (something I always look for in a crypter). I especially like the crypters selectable stub system that you don't see on many others, and with no dependency... the execution rate is simply amazing! Fortunately for me I have had no need to call on support but I am sure it would be high quality as well like everything else associated with this product. So all in all this is a very nice crypter that lives up to it's expectations in every way. I would highly recommend this to anyone interested yet skeptical on buying. If permitted I will be keeping this crypter around for awhile for sure ?

Make sure you guys clone.

MARVID - *September 5, 2013, 3:50 pm*

I meant to do this on the six month mark but I missed it for two months since I completely just forgot about it.

Anyways its about time Absolute had a short sale all prices have been dropped by 50% till the 15th of this month!

Those of you who are always asking for discounts this is your chance to extend renew the your memberships. I am also going to add two new packages just for following ten days.

1 Month = $12.5
3 Months = $25
6 Months = $40
12 Months = $80
Lifetime = $160

Prices on the websites have been updated.

I've been using this crypter for 2 months now, I have no complaints about the crypter or the support for it.

There are frequent updates, if you cant get your file FUD chances are if you change some settings you will, don't forget its not the crypter that makes the stubs detectable its the people scanning where they shouldn't be and people who use scans to remove the crypted files.

I personally have had to modify the settings to keep my files FUD, but they are FUD none the less.

Thanks for the great service!

That has nothing to do with the crypter. its the configuration of the RAT you are using. Check your configurations and use google to understand the difference between a crypter and the Remote Administration tool you are using.

EDIT : also check your port forwarding.. Might be a problem with your ports

This message has to be 35 characters.
The stub is the file which comes with the crypter and tells the crypter how to crypt your RAT.

Meaning the Crypter is only the "Doing" part and the Stub is the "HOW to do" part. If your Stub gets detected every RAT you crypted with it gets detected also.

Hope that clears it out a bit.

Actually the crypter could be the problem if he is trying to crypt a managed file or if his file requires EOF. If this is the case then this is his own fault and not the crypters as he should have read the thread before buying.

The stub does not 'tell the crypter how to crypt'.

Actually he is right if its not getting the connection its most likely because the ports aren't open. It won't let you crypt if EOF is required. It will say "Error! EOF is not support!"

Crypter works. Notice I had a builder update. v12.0 make sure you are using it. v11.9 won't work

with the new stubs.

Changed the encryption on the stubs hence causing it to crash.

So just use v12.0 it works.

Make sure you use builder 12.1, 12.0 won't work with new stubs.

The stub file is basically what tells the crypter how to encrypt the file, I know marvid did say he was moving, perhaps this has delayed an update?.. you should have the stub in the same directory as the main absolute .exe file

Hope this helps.

Some of you may have noticed that updates have been slow lately, this is due to me moving, my new address for my house does not appear in some places like my internet provider hence is why updates have been slow so according to them my new home address does not exist, I should have everything update and running in 3-4 days hopefully, again I said I should.

In the mean time since I can update the crypter without internet. This is what I am going to for my costumers.

Everyday I do not update the crypter you will get 2 extra days added to your license. Along with an extra week.

I am sorry, but I can not work from my iPhone now can I?

This thread is going to be closed in the meanwhile. I will reopen the thread as soon as I can. I am sorry for all the trouble. I will make it up to you guys.

Take care,

MARVID

You guys lack the intellectual capacity to clone like instructed when purchased.

Those 5/35 go away when cloning a file like idk, NPE.exe

Neither you ever pmed me asking for help either.

As for snufas if it is not working with the products you use, it is because it requires .NET or EOF support which in the thread clearly I state I do not support.

Do you want to work properly (Japanese, Chinese, Korean) in language in Asia?
If you intend to work on you, and then I buy without hesitation.

This crypter is never fud.
Marvid tell fixed the situation but no. He only test with cg/dc, only this, no more.
My all files 4-5/35 with newest stub. I dont know how you can make 0/35, maybe fake scan. Next time test all bots, not only the shittest dc/cg.
Last time was i bought this unusable crypter. Never FUD. NEVER!!

apnits - *December 5, 2013, 11:10 pm*
I want the current status of it.
whats current detection rate? i see in the post that it works with andromeda. and it doesnt have any dependency bcz its coded in c++ ? right?

Funny, you do notice that you are the only one complaining right? Keep it up.

Pretty funny, how you call it an "unusable" crypter yet you bought it more then once, gtfo.

Follow instructions next time. You will achieve an FUD output. I do not only test with DC and CG. That is what I tested the time you asked me what I was crypting.

I tested with bb, andro, bozok, cg, dc, netwire, pandemic during last update all had a FUD output.

And again you are the only one complaining, I will be glad to make a video proving I can get an FUD output just to shut you up.

I am at work currently but I just logged into scan4you and looked at the history and people are still outputting FUD results from the last update.

If I am not mistaken that is coded in .NET I don't support .NET. If its not coded in .NET make sure it does not require EOF, and if it does not requires anything mentioned above it will work, or your money back. :p

I really don't know where you get those FUD scans (maybe using other crypter?lol). Stub was updated 4-5 times in the last 2 weeks and after trying all the possible ways of using this crypter (not many anyway) the best result i got all this time was 3/34 on its own scanner. Simply, your crypter is not FUD at all, so at least don't post those funny scans.

It would make solving your issue a lot easier if you actually provided details about the issue(s) that you are having along with which settings you are using on the crypter. For example, if you are getting same engine detections on the scanner then you will have to clone another file when you are crypting. If you are already cloning and still getting detections then look for another file to clone until you find a suitable file that reduces the detection rate.

Other than the previous statement, I cannot suggest any other solution as you did not provide enough details.

No point for details, cause your crypter doesn't have many futures (i dont even care about the futures as long as it is FUD). Just tell me which file you cloned to get FUD scans. If i'll get same result as you, than i take my words back. Oh, and as long as FUD problem is not just mine as i see in previous posts, please don't ask for privacy (in case you would).

Enough. It is FUD, and I can teamview you to prove it.

Don't need teamview or anything else. When i sad was not FUD, it wasn't. Now the builder is

updated and stub as well. I can confirm as well it is FUD atm, plus the stub is much more smaller than before. Great job, thanks and lets hope is gonna stay FUD for longer time than before.

The video was made before the builder update. The builder update just contains some banned licenses for kids that charge back. Anyways enjoy.

Looks like a nice crypter!

PS: you can pack your .net file with RPX and then crypt it. I used to have a crypter that didn't support .net files and I was packing it every time with RPX: http://rpx.codeplex.com/

There isn't a new stub yet so that is a scan of Friday's stub. Marvid has said that he had no power so will be late with the update. I guess the power outage is lasting a little longer than he thought.

Many reason, 1. You aren't probably cloning. 2. If you are cloning you are cloning the wrong file. 3. You lack the capacity to ask for help via pm. Keep it up.

I just checked the scans on scan4you they are all okay.

After over a year this is still the BEST crypter you can buy. Not only does it have no dependencies but it has remained FUD for over a year.

Hello Marvid!!
May I ask how to renew the license?
I must extend contract period for crypting files.
As I purchased the absolute crypter, must I pay it in the same way?

Plz let me know it ^^

Ur service and absolute crypter are perfectly satisfactory to me!!
Hope you get busy with sales!!

Not sure where all these accusations are coming from, I have used Absolute for about a year now, There have been ups and downs as far as staying FUD, but I have had NO other issues.

I have yet to see any proof of MARVID pre-infecting or "ripping" people off. All of the accusations have come from normal members with less than 50 posts, or "ozzzas" who's apparently bought a bad batch of crack. If I would have read something negative from someone with more "trust" or presence on the forum, it may be worth..... well it comes down to proof either way. put up or shut up!

Absolute is not detected by BitDefender but remember it also has to do with your software.

People assume it is solely up to the crypter to bypass a antivirus. That is a lie.

Of course it comes with support.

If you tell me what you are using I will tell you if it works or not. So yea I'll guarantee that if it does not work with your file. You will be refunded.

Todays update is a little different mistake on my part, you need to pm to receive the new builder so you can check for updates, I fucked up and lost the account where I registered the domain. Now I can't renew it. Since I don't have access to it.

Due to this mistake the crypter will go on sale for a week. This will benefit new and old costumers.

Todays update : Status FUD pm me to achieve it.

Yes. It does has unicode support.

Yes. It works with betabot.

And the stub size varies from 12-64kb, so do the math.

I am having hardware issues, possibly updates will be delayed.

Could be the motherboard or the ram.

Please be patient incase a delay does happen.

I will give extra time to everyone if a delay does come around.

I am unsure on how you are getting that result seeing how no one else, including myself is. Make sure, you are up to date with updates. If you need help contact me via pm. The crypter is currently 1/xx which will be fixed later on today.

Well, your problem is that you are using an old builder, old stub and probably using a useless clone.

I pmed with your instructions on how to fix it.

Fixed the detection from yesterday enjoy guys.

I bought this product, it's a decent crypter and Marvid is amazing. Very nice support! Although I had some bad scan results today 5/39, and I also reported some programs/antiviruses which detect stubs. Let's hope that Marvid will fix them all like he always do.

A big Vouch for this Guy, really knows what he is doing. I had an issue and he gave me all the attention i ever needed through teamviewer and the issue was solved , and he also keeps the crypter fud.

Here a link to my last scan

QUALITY Crypter easy to use AMAZING customer support.

Been on rampage to find a fud crypter, today with this gentlemen i did!

Thank you so much.

Can someone post the current status of detection, from the comments on thread, the product look quality, but never tested.
I am looking forward to test it, is it possible to get one testing Crypt and if it's FUD, I would buy it?

I bought this crypter yesterday hoping it was fud, turns out it wasn't.
I wish for this to be resolved, what was weird is that even after the update to the thread saying it is, it still isn't. Thanks.

Sexy and completely intuitive when it comes to updates. I love the transparency of the stub updating process and like to be able to see when stubs are rotated out, even if it is a little extra work to

update all the time. Of course the file cloning updates are awesome too, it sucks to have to go find a new icon all the time and it's genuinely helpful to have a new icon anytime I notice I need one. Beyond that, looking at the simplicity of the interface, any idiot can use it. Lastly, it's FUD, if you're not getting fud results, you're not doing something right:

Thanks for helping out once again.

I made a clone maker, feel free to use it to make clones.

Enjoy everyone.

I don't support .NET so no. Sorry. Although please check out my friends over at Data Encrypter. Probably the best .NET crypter on HF.

If you don't mind waiting .NET support should be added by the end of the month.

Well both,

Private crypt is $30

Private stub is $75

If you want have a subscription on the private crypter, you can pm for prices.

ZDS999 - *July 21, 2014, 4:22 am*

Have sent u a PM and looking forward to try this crypter!

tuckery0 - *July 21, 2014, 9:11 am*

Used this crypter, bought a week and it is by far the best one I have tried yet! I have just bought another week and really hope MARVID comes online soon so I can get my key :) Vouch for this product.

24/7 - *July 21, 2014, 9:47 am*

Not sure why the title says '[$10]'. I would have bought it for that price tho.

For it might be a clone also but unlikely.

It can also be the name of your file.

Please message me back with what you are using.

Just purchased, the crypter is FUD and I also tested on a fresh install of Windows VMWARE and my program ran perfectly. So definitely no dependencies.

I cann't use absolute crypter for 7 days
In my experience,
To work that, New stub is key

Are you sure you're cloning? Check for updates and use the most updated stub as well as cloning the file "Clone.exe". After you've done that scan it in the built in scanner and it should be fud.

I don't support. IM3 as of now. Planing to having a .NET stub along with a C++ stub soon. It will be like having to crypters in one. :P

EOF brings detections, getting rid of those detections is 3 times the job.

EOF will never be added to this crypter, not while it remains this cheap. Absolute had it back when it was first released but it was removed within a month.

$25 is to expensive? Really? For a C++ crypter is actually extremely cheap.

You should stick your head out of HF once in a while. Also Absolute is the cheapest C++ crypter on the market up to date also one of the top crypters here, and seeing how its only C++ crypter that has made it for more then 6 months the price is great.

So don't worry you will never have to consider buying my product.

Like the person above you said any settings on netwire will work with Absolute.

Question "Do you use the crypters install settings or netwire?"

Both will work, you will have better results with the crypter's startup.

This are my settings, for netwire. Simply as bare as possible.

Exactly the same on Netwire its just a detection that will be fixed soon.
Absolutely Brilliant, myself and Marvid just spent the past two hours troubleshooting on teamviewer, turned out to be my fault however he even went to the length of editing the stub to try find a solution. If you look into my posts you will see I am the owner of most popular Remote Administration tool as well as owned the majority of big crypters on the forum.

The support he gave was excellent, the program itself has been FUD since the minute I installed it which for a crypter with an extensive amount of users is amazing.

Props to Marvid.

Just throwing my thoughts on this crypter since I bought a week to test it.

Firstly, the price is good for a native crypter. Most native crypters are pretty expensive on Hack Forums so this is probably the cheapest. Secondly, Marvid is an excellent person, replied in less than 20 minutes to help me with my issues. Thirdly, my first crypt was totally FUD once I cloned the file.

So what's not to like? Cheap price, good support, and FUD. Thanks Marvid for this amazing native crypter.

Just an update, to be perfectly honest I have never seen a crypter like this before, its unique in the way MARVID has coded it, DO NOT let the price put you off. I have had a 1-1 execution rate, either extremely lucky or its down to the crypter which I think it is..

Just an update, crypter is still FUD and I am in a good mood because I finally made my moneys worth, its been a while I thought I was loosing my touch. I advise if you are using netwire to use netwires installation not the crypters however both work.

i have been looking for a better crypter, i bought many of them from hf but i dont want to mention the names of the crypter but all of them will promise you fud and support but as soon as you purchase it their will not reply you again.

a friend of mine told me to buy absolute crypter that i will not be disappointed.
to be honest with you and anyone out there who want to buy crypter... this is the best crypter that i have ever used and bought from hf.
great service and support and 100% fud.

I can personally vouch for this crypter. and marvid is friendly and great guy.
please keep it up

You like rubbing his asshole?

This product is pure shit.
Where is the part in your reply where it says this has no persistance what so ever?
Oh noo ofc becuzz your showing a scan of 2/35 (proof that what i said 1 post earlier is true)

Oh and not 1 bad word from you ? How come? U bought a UD crypter ? No persistance how come i cant hear a bad word about this crypter from you ?

Ohhhh becuz you are assbuddys and like to rub eachothers ass all day.

Go get a fkin job instead of stealing people money selling shit items.
Just a thought, IF I were trying to sell a "shit" product for someone else why would I even post that it's 2/35, wouldn't it make sense for me to make it FUD then post?..

How would you like me to test persistence with a file I created 2 minutes before posting, should I call a slave and say "hey can you please reboot so I can test my crypter's persistence?"

Take your head out of your ass and just think before you type, better yet, take a look at some of my other posts, I don't take sides with anyone, I just help members where I can or at least offer, which I would have offered you as well, but after that Bullshit post your on your own.

Thanks and have a nice day.

You can't be serious. You ordered at 1:45 AM when normal people are sleeping. Also you post was at 7:52 AM thats 6 hours and 7 minutes, guessing apart from being impatient you can't tell time either.

Oh also let me add that HF was down for 14+ hours. What am I suppose to do?

Learn to be patient, otherwise you will get nowhere in life.

The crypter itself can, of course runtime also depends on the malware.

$10 for a week, no I don't support EOF. It's useless and it just brings detections.

1. Varies.
2. The crypter itself is, like all crypters bypassing an av is dependent of both malware and crypter.
3. If you use startup on the crypter the bind file will run upon restart. If you use startup on malware. The binded file will only run once.

Yeah because EOF is not supported. Looks like the file your trying to crypt is .NET, which is not supported by Absolute at this time.

It is all posted in the main post.

Just purchased a version of Absolute Crypter, amazing. I did not at first understand what to use, nor was I used to the settings, but Absolute made sure that everything was setup correctly, took time out of his busy schedule to help me set it up. This is easily the best Crypter out there without a doubt, and I will continue to pay monthly for this first-class product. I doubt anybody spends more time and actually cares about their product as much as Absolute.

10/10 all day.

There is a difference between a runtime detection and a scantime detection. Absolute is not detected by ESET on runtime. I am sure.

Prove me wrong that absolute is being detected at runtime by ESET and I'll give you a lifetime license for free.

Wait for the update like everyone else. I am at work, I'll fix the detection when I get home if there is any.

What malware of your using? Your malware/settings is probably giving you problems, not all malware passes any av. This has nothing to do with any crypter.

Go ahead, and pm me. I'll recommend you stuff.

But regardless enjoy the crypter.

Hello I am new into these stuffs and recently read bout keylogger. Well let me basically tell u what I am doing. I want to create a server, then I want to hide the server in a picture. Then I want to FUD the picture. Will the keylogger still work if it is crypted after it is copied into picture using cmd? Or is there any other better ways?

Thx, vongolo

shouldnt post on sales thread fella as sellers don't like it!

360 is always funny with icons if that help! use a small icon that normally solves 360 issues for me with other crypters!

pm him if need more details as you don't wanna sound like your bashing on a sales page :)

All you needed to do is wait for an update.

360 uses same engine. (bit defender and such) if same engine picks it up so will 360.

So check for updates. :p

works flawlessly,

- Just a pro tip, make sure you check what version you are running before you crypt files and complain,

i made that mistake, without checking the build version. ?

- All in all, very good crypter. MUST BUY! ?
Thank you for buying glad you like the crypter.

You can't search?

Anyways, here is the short story.

1. Bin
2. Crypter
3. Output

Bin, has detections crypting it with the crypter will remove the detections and make an output the output is what you spread. Simple.

If it wouldn't work, I would have agreed with you, I tested before I posted. Also if it wouldn't work my thread would be getting shit ton of complains.

I guarantee you it works. Make sure you are using builder 18.4 and your stub is up to date. If you can not still figure it out by then go ahead and pm and I'll teamview you.

Pm me your contact info and I'll take a look for you guys over teamviewer, interesting that of all my costumers ,you two are the ONLY ones having problems I mean that is you are crypting correctly.

I referred to the builder version because around 8 people asked for the exact same thing and they all where using an old builder so if you both of you insist it doesn't work. PM your contact info and I'll get back to you.

Adding true .NET support on C++ is not possible. Believe me, at least I don't know how. Other crypters use "binder" code to crypt .net on c++ but that will not make runtime = useless.

I will eventually add .NET stubs or autoit stubs with .NET support along with c++ stubs from Absolute, but we will see.

FUD time will vary on update. It does work with netwire. The crypter its FUD on runtime tested with scan4you av list. Now bypassing an av with malware is both the crypters job and malwares job. As in any crypter.

I doubt I will add autoit stubs along with c++ stubs. Unless people want it, cause you know due to the size and stuff. I'm leaning towards .NET but boy do I hate this.

I do not accept PayPal automatically. In fact I make people message me payment proof and everything. Now if they charge back. I have a bud over at PayPal. So I never loose money. And if its a charge back from a stolen cc. I don't get the processing fee.

Of course the crypter self inject. I don't see why a crypter wouldn't be. As for x86 bins of course its supported. Now if by managed you mean .NET as stated on my thread I don't support .NET.

Users of Absolute.

I am out of the country for the holidays. And the laptop I brought with me to code is out battery and I can charge seeing how my mother in law took the charger. Now, I am aware that Absolute is in need of an update. Everyone will have to wait until my mother in law comes back with my charger.

I will give extra time to those who ask for it. Assuming your license has not expired of course.

As for new costumers don't be alarmed. Those who buy today will also be eligible for extra time of course.

Anyways, what I am saying is to please be patient. I am working on it.

Absolute is has been updated the post above is now voided. Those who pmed me will get the extra time.

Current scan.

Can your friend not speak for himself?

If he needs help he can message me.

As for the detections if you didn't know bypassing an AV is both the crypters work and malware work.

I tested every AV on scan4you on runtime last week. It not being detected on runtime so if your friend who appearenly can't speak for himself. Is getting picked up it most likely his malware. Which will happen with any crypter. OR he didn't follow my instructions. When activated. Again only he can fix it not you.

Both. Legit files and malware. Testing if a crypter is detected on runtime needs to be with a clean file. If not and it happens to get detected you do not know what is being detected now do you?

If it makes you feel happy. Runtime testing was ALSO done with the latest legit uncracked version of Andro. So malware was used.

I really do wonder, why people think 10$ is a month. Where on my thread does it say that.

Anyways if you read you would know $10 = 1 week.

If you don't know how to use the crypter ask for help.

It's not FUD (see posts above) and even if it was - not for a long time. Few days, 1-2 weeks maximum. This (as many other) crypters are sold on an as-much-$$$-as-possible basis. The author doesn't care about FUD, all he worries is about income. No illusions about that. Why? Because too many people share the same piece of software and it takes one moron uploading a sample to virustotal to bust every customer.

Better pay someone to teach you how to FUD anything yourself your own way. It's not that hard.

It's fud for you and its fud for everyone funny 1 kid complains out 100 and it turns out the kid didn't know what he is doing.

Now we get other kids like Samir who don't even own absolute posting on the thread. Funny no?

Thanks for your post.
