Thread: [\[TUT\]Setting Up Poison Ivy RAT + No-IP DNS + Pictures NOOB FRIENDLY \[TUT\]](#)

Dragon Hawk - March 19, 2010, 9:33 pm

In this tut I m going to tell you how to setup poison ivy Remote Access Trojan.
This will be very beginner friendly step by step easy to understand with images.
So let's start

Requirements

1)Account on no-ip

Click [here](#) to make one

2) Poison ivy

Download from [here](#)

Adding host to your no-ip account.

Simply login and click add host

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/no-ip1.jpg[/img]

Enter the name for your host and press create host

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/no-ip2.jpg[/img]

Open poison ivy that you download earlier

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis1.jpg[/img]

Click on file and then click on new server

Then click on create profile

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis2.jpg[/img]

Enter your desired name for the profile and click OK

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis3.jpg[/img]

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis4.jpg[/img]

Just clear all the existing hosts by right clicking on it

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis5.jpg[/img]

And the host name that we created on no-ip

Then click on test connection to check that the host is accessible

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis6.jpg[/img]

Just follow the image

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis7.jpg[/img]

Again match every thing as in the image

[img]http://i881.photobucket.com/albums/ac16/evilhacker1337/pis8.jpg[/img]

Just make every thing as it is in the image

have to give the links because of the image limit per post

<http://i881.photobucket.com/albums/ac16/evilhacker1337/pis9.jpg>

Press next

Click on generate to build the server

Enter the name to your server

Then press OK to finish building the server

<http://i881.photobucket.com/albums/ac16/evilhacker1337/pis10.jpg>

Now click on file and then click on add new client

Enter the port number and password that we created earlier

And then simply press start

<http://i881.photobucket.com/albums/ac16/evilhacker1337/pis11.jpg>

All is done guys

Just upload your server or bind it with a popular software and spread the link.

Comments are always welcome

If you have any problem regarding the setup then I m always here

EASTBAY LOC - March 19, 2010, 9:58 pm

Nice tut, I plan on changing over to poison ivy so this helps, thanks!

Dragon Hawk - March 19, 2010, 10:09 pm

(Mar 19, 2010 09:58 PM)keonetics.exe Wrote: [\[CITE\]](#) Nice tut, I plan on changing over to poison ivy so this helps, thanks!

No Prob

If U get any prob or need help
then I m here

whats this guys 27 views and only 1 reply

DjStefkO - March 20, 2010, 4:23 am

Nice guide but i have a problem at the end it says "error port is already in use"?
I have tried 3 ports still doesn't work.

Dragon Hawk - March 20, 2010, 4:27 am

(Mar 20, 2010 04:23 AM)DjStefkO Wrote: [\[CITE\]](#) Nice guide but i have a problem at the end it says "error port is already in use"?

I have tried 3 ports still doesn't work.

Maybe u are trying ports that are kept for some other applications

Fallenour - March 20, 2010, 5:22 am

Poison Ivy isnt there anymore

Dragon Hawk - March 20, 2010, 5:30 am

(Mar 20, 2010 05:22 AM)Fallenour Wrote: [\[CITE\]](#) Poison Ivy isnt there anymore
There are many more

which one u like

I could make a tut on that also

Mr Kewl - March 20, 2010, 6:05 am

Great TUT man

What bout Cybergate

:-??

Dragon Hawk - March 20, 2010, 7:37 am

whats going on guys

Clubbers - March 21, 2010, 1:55 am

Poison Ivy woowooooow good work

revtorus - March 21, 2010, 2:39 am

Hi,

Thank you for your sharing but i have a question :

First of all i'm not a beginner in knowing how to setup and use a rat and i have already got a bunch of victims but the problem is that i can't remote control the victims who have Windows Seven/Vista even if they don't have an AV well i can take a screenshot but that if all i can't use the keylogger or close one of their processes and i have used a lot of Rat so as :

Cerberus,CyberGate,Spy-net,Prorat,Bandook,Poison Ivy,Turkojan 4,Bifrost,Sub 7 etc ...

Is this because they are old ? i guess so ...

Anyway i was wondering if you know a rat who work with victims who have Seven/Vista .

Thank you for your responses ;)

deocute - March 21, 2010, 3:07 am

im a newbie, what port am i going to use?

Dragon Hawk - March 21, 2010, 3:39 am

(Mar 21, 2010 03:07 AM)deocute Wrote: [\[CITE\]](#) im a newbie, what port am i going to use?
use any like 82,83

or any of your choice

Tolibon - March 21, 2010, 3:40 am

WOW nice tutorial dude, will certainly try it.

Dragon Hawk - March 21, 2010, 3:40 am

See I m using Cybergate

But Also If my victims has a windows 7 or vista then I could not change there pass or anything like that. Maybe thats because of a newer version of OS.

You need to port forward if you are in PPPOE mode i.e your net connects automatically when your modem starts.

But you dont need to do it if you are in bridged mode i.e you need to connect the net everytime by entering username and password given by your ISP.

If you are in PPPOE mode goto <http://portforward.com> and search your router and you will know how to port forward your router

Le Jeu Avant Tout - March 23, 2010, 9:58 am

Do you need to port forward for this? Its just i am unable to port forward

Dragon Hawk - March 23, 2010, 10:24 am

FormatHacker - March 24, 2010, 4:15 am

whats the meaning of PPPOE?

and 1 more thing

i got my main router and i have splitter(router aswell)(maybe they have different gateway)it means i have 2 router connected to each other..

so will i get conflict?

cuz for me it has conflict =S

and my router(splitter) got owned

after doing the portforward thing

Nikola - March 24, 2010, 4:59 am

Nice guide, thanks (:

Dragon Hawk - March 24, 2010, 7:35 am

cuz for me it has conflict =S

and my router(splitter) got owned

after doing the portforward thing

PPPOE means Point-to-Point Protocol over Ethernet

If you have differnt gateways for both the routers than there will be no conflict.

As you are having conflicts I think the gateways for both the routers are same.

Cant say much about it ATM will try to get some more info

-Buck- - March 24, 2010, 7:36 pm

Hey I;m new here, I followed your tut to the dot. And I set up everything alright but I just infected someone and theyre not showing up on my listening boxes,they said they dont have anti-virus so idk what else it could be? They also said their "paypal money generator" didnt open? I'll keep trying things but idkk

Dragon Hawk - March 25, 2010, 5:28 am

(Mar 24, 2010 07:36 PM)sbuck1994 Wrote: [\[CITE\]](#) Hey I;m new here, I followed your tut to the dot. And I set up everything alright but I just infected someone and theyre not showing up on my listening boxes,they said they dont have anti-virus so idk what else it could be? They also said their

"paypal money generator" didnt open? I'll keep trying things but idkk
This may be because of incorrect port forwarding or no port forwarding

goto <http://www.portforward.com> and search your router.
There you will be able to know how to port forward your router

xhavikx - March 25, 2010, 3:51 pm

em i cant run poison ivy on my computer it wont open and after i do try its classed as a virus threat on my computer

Dragon Hawk - March 25, 2010, 8:11 pm

(Mar 25, 2010 03:51 PM)xhavikx Wrote: [\[CITE\]](#) em i cant run poison ivy on my computer it wont open and after i do try its classed as a virus threat on my computer
Dude all the RAT's are detected as virus/trojan by AVs indeed they are trojans.
So plz disable your antivirus before doing this else you antivirus will not let you do any thing.

upload it to mediafire,# or any other file hosting and send him the link

ayman_19_10 - May 27, 2010, 8:31 am

ok wat about the cryption cuz he is using a macafee anti virus and bit defender so i need a good crypting program so no one can catch it as a virus or torjan !!

and while creating the server , i m facing a problem where i dunno which ip of me i can use , and i tried to use no-ip which appears to me an ip i choose my own !!
wat if his Ip is the same wat should i do ??

hope u can upload it as a video with an example of how to create a host and setting my self Ip on no-ip server and creating a host and hack ppl and the best crypter
so i can start tryuing it dude :)
thanks for reading and sorry for the disturbance i made to u

windowww - May 30, 2010, 3:07 pm

RATS NOT WORKS

--

I have Poison 2.3.2

I want to Use ,I have Read Nicely Tutorial ,I have Create No-ip Account Also No Ip Duc.When I Start My Pc No-ip Duc Update Correctly ,I have Download Port PFPortChecker Becos After Port Forward I Need To Check ,Port Is Open Or Not ,I have Forward Port 3460 .When I have Check By PFPortChecker It Show Me "Port Is Open"

So I Think My Setting Is Right.

Now I Want to Create Serve

I Have Put my No ip Adress & Port But When I try to connect Its Show me Red X

But When I try With This ip 127.0.0.1:3460:0, its show me green right .

I have try with this ip 127.0.0.1:3460:0, i have create server then i have sent to my friend pc ,he run it his pc but nothing notification. My Friend pc he Dnt use Any Antivirus .yes My pc having Kaspersky Antivirus but It disabled.

So Any One can You Help Whats Wrong With me Why I cannot Catch My friend Pc

I Have 2 internet Connection

1. Is I am behind Router
2. Other One I have UMTS usb Connection

I have try with Connection one

connection 2 UMTs Usb Connection I dont Know How To Port Forward Or How To Use with Poison

Any One can You Tell me Which Rats Is Good ? I have Prorat ,ProSpy Full Version i mean Paid Version ,Its Work Great With Me But Detectable

Also I have Try Turbojan That Also Works Good For me But Detectable

If Any One have good Working Rats ,Plz Pm Me I am Agree to Payble for work

Sorry For bad English

Thanks In Advance

Robbert-jan - May 31, 2010, 12:53 pm

Hello,

I was trying to set up the server like the images are showing i fill in my no-ip host at the DNS/Port but when i click the Test Connections button it fails.... someone got an answer for this?

taljm2002 - May 31, 2010, 9:54 pm

ok im trying to send it thru yahoo, it says there is a virus. i crypted it.. it still wont send

What ABOUT My Problem

Did You Read My Post ?

RATS NOT WORKS

--

I have Poison 2.3.2

I want to Use ,I have Read Nicely Tutorial ,I have Create No-ip Account Also No Ip Duc.When I Start My Pc No-ip Duc Update Correctly ,I have Download Port PFPortChecker Becos After Port Forward I Need To Check ,Port Is Open Or Not ,I have Forward Port 3460 .When I have Check By PFPortChecker It Show Me "Port Is Open"

So I Think My Setting Is Right.

Now I Want to Create Serve

I Have Put my No ip Adress & Port But When I try to connect Its Show me Red X

But When I try With This ip 127.0.0.1:3460:0, its show me green right .

I have try with this ip 127.0.0.1:3460:0, i have create server then i have sent to my friend pc ,he run it his pc but nothing notification. My Friend pc he Dnt use Any Antivirus .yes My pc having Kaspersky Antivirus but It disabled.

So Any One can You Help Whats Wrong With me Why I cannot Catch My friend Pc

I Have 2 internet Connection

1. Is I am behind Router

2.Other One I have UMTS usb Connection

I have try with Connection one

connection 2 UMTs Usb Connection I dont Know How To Port Forward Or How To Use with Poison

Any One can You Tell me Which Rats Is Good ? I have Prorat ,ProSpy Full Version i mean Paid Version ,Its Work Great With Me But Detectable

Also I have Try Turkojan That Also Works Good For me But Detectable

If Any One have good Working Rats ,Plz Pm Me I am Agree to Payble for work

Sorry For bad English

Thanks In Advance

I've never heard of these, what are they?

Bro - June 4, 2010, 1:32 pm

nice tut now for a decent free crypter :/

sjosue160 - June 4, 2010, 2:25 pm

I followed everything you told me to do. And when i Generated the file onto the Desktop and tried running it. It doesnt work. I dont know what i'm doing wrong. Please Help

I just got into my router settings and put Poison Ivy to port 95.

I went back to the program and created a new profile. When i replaced the DNS name to the one i created in no-ip, it shows that there is no connection. How do i fix this?

windowww - June 15, 2010, 2:55 pm

Very Nice Tutorial ,

Thanks For Share it

Awcdfri - June 15, 2010, 5:23 pm

The download link is dead... :(

windowww - June 20, 2010, 7:00 am

Poison Is Nice rats ,But I think Should Add File bind Option

Upset Turtle - July 16, 2010, 7:38 pm

Cool thanks for the tutorial :)

Noob question alert: How do i ddos with poison ivy once i have some infected computers? Or can you not?

Thanks :)

capitalfear - July 19, 2010, 5:26 pm

hey okay im trying everything to open ports and everything port triggering...sigh nothing is working. i am using a verizon router and ubuntu...please help it keeps not being connected in poison ivy

vulge - July 19, 2010, 9:46 pm

hmm, so this doesnt need portforwarding?

capitalfear - July 20, 2010, 12:01 pm

never mind, now whenever it tries to connect it just goes to my router when i type in the name of the website, i dont understand this. the port is forwarded. so i tried to get to the "host" i made so i went to **.no-ip.biz and it tried to connect to my router and asked me to sign in....please help

bob_21 - July 20, 2010, 4:06 pm

i wanna follow this but link is dead ? re up anyone ?

Dragon Hawk - July 20, 2010, 8:31 pm

Link isn't dead

just go here

<http://www.poisonivy-rat.com>

and click on downloads

dudeofgods - July 27, 2010, 10:08 am

need help i try diffrent ports and send the exe file to my freind but nothing happens

splintercell44 - August 6, 2010, 7:46 pm

Awesome tut, thank you! now to find a nice crypter for it?

up2sumthng - August 14, 2010, 7:07 pm

great TUT! i can't wait to set this up and give it a try.

im a noob and i have 3 question that i hope dont make me sound 2 stupid.

1.if i zip the server how do i make it execute on the victims system (even if i am putting in on myself)? i was told to zip the server so that it would be FUD but when i tested the zip file using cybergate it was found right away.

2.is there a big difference between cybergate and poison ivy? keep in mind i am a noob but everyone ive talked to seems to like poison ivy over cybergate or prorat. i want to use what ever is going to work on xp, vista, and 7

3.how do i bind the server to the victims startup? i want my server to run every time they start the system up.

i found that i was disconnected from the victim if they shut down there system and i cant make them click on a pic every time they start there system.

thanks 4 all the help guys!!!

azeer - September 8, 2010, 2:31 pm

Dr. Pokey - September 10, 2010, 7:39 am

I'm new to rats, and I'm confused about what it means to "inject into browser", what does this mean, what is its purpose?

Ontsnapte - September 10, 2010, 7:51 am

(Sep 10, 2010 07:39 AM)Pokey Wrote: [\[CITE\]](#) I'm new to rats, and I'm confused about what it means to "inject into browser", what does this mean, what is its purpose?

It means that the server attempts to hide itself inside a running instance of process of the browser (when victim looks at taskmanager, your running server will be harder to spot).

Dr. Pokey - September 10, 2010, 8:57 am

I don't have a FUD crypter therefore I won't be able to help.

You should use some crypting service free/paid or you can buy a free crypter.

You can also search the community you might find some free FUD crypters.

Johnf - February 14, 2011, 10:02 pm

Sorry, still trying to learn about all of this stuff but what exactly starts the infection what file do you send or what file do i execute to try it on myself

Again sorry i'm still a little new and you have to start somewhere and you look like you can help lol.
(:
Thanks

exodustheone - February 14, 2011, 11:06 pm

where can i download poison ivy?

Onyx Murders - February 20, 2011, 8:03 pm

how do we send this to people now? >_>

[Coder] - February 20, 2011, 10:19 pm

It doesn't need to be port forwarded?

Davanara - February 28, 2011, 2:58 pm

Hi, well done guys!Reaally good Tutorial!

i've been trying PI since 2 days but i can't build a server because of one problem:
i dont stop seeing the red little cross when i test my connection, which doesnt connects me with my server, when i test connection there is no green V but a red cross! what could it be ?
i have portforwarded my router to port 3460 TCP and UCP, also for port 8000, 4444 too, also TCP UCP, but still, i have nothing, no connection between my PI and the server,I have no ip account and two no ip adresses, everything is fine besides this connection problem!
i'm running W7 as operating system, i followed like 10 tutorials and am always stuck on that point, no one explains it further even thought its the most important step to do, so i hope u guys know some answers to this problem.
i thank you again.

panic21 - March 1, 2011, 11:55 am

very nice tutorial thanks

IntelNerd - March 1, 2011, 12:35 pm

i setted up a pi serv for like 1 year ago and now im getting this..

[1.3.2011 21:33:03] Connection attempt (201.13.183.44)

[1.3.2011 21:34:54] Connection attempt (201.13.183.44)

nellis2k11 - March 1, 2011, 12:42 pm

Great tut i might change to poison ivy

grinchmas - April 15, 2011, 5:43 pm

I've been having the same problem. any help would be appreciated

NICHOLASR - April 23, 2011, 2:54 pm

Nice tut! i followed all of the instructions and i was to the last step when i had to add a new client and it said "Port Is already in use".

Please help?!

-NICHOLASR

s3lfadmitted - May 10, 2011, 4:06 pm

the link for PI doesn't work any more. I don't know where I can find it.

kaoticsolja - May 13, 2011, 9:43 pm

first off thank you for all your help, second of all my problem,

I can never get my test to go though, i used port forward to see if it's open; it is, i use no-ip server and still i get red x,

So i am assuming that's why when i test my client at the end it says it stopped working (my third problem) any idea?

And yes i did have to open the port myself but PF says it's opened, and i tried a few

application error this application was unable to start correctly 0xc0018

PS i dunno how but i got one green x (good ip and port) and cannot anymore)

demetreftw - June 21, 2011, 12:32 am

why does no one answer the test connection problem with the no-ip website? i mean it's obvious that a lot of people get stuck on this part of the RAT setup. i've even tried opening the server on myself and no connection appears on PI.. firewalls/ports/av's all open or off. any help would be much appreciated. thanks

[IMG]<http://i872.photobucket.com/albums/ab284/vdemetre/failedtestconnect.png>[IMG]

glamrockchick - August 3, 2011, 11:12 am

i've created a file, how do i get onto someone's computer? someone said to get a crypter is good so the anti virus don't detect me

Marked - August 27, 2011, 4:50 pm

Sickness dog now i know

weed hat

?

hermiod - August 27, 2011, 9:32 pm

port forwarding is not needed for this RAT?

DrDerpyHooves - August 23, 2012, 11:06 am

Thanks buddy! Great Tut! Made it really easy setting up this RAT. Now I have 3 decent RATs set up I can see which I prefer! Nice one! :)

shotzinthedark - August 23, 2012, 12:57 pm

Great tut, I'll give it a go later :)

V y r e z - August 24, 2012, 7:04 am

Is there any way to test Poison Ivy on me?

youtubegoogle - August 24, 2012, 7:30 am

wow might try it out sometime.. This is great.

emile - August 24, 2012, 2:57 pm

Thanks for the tutorial man.

But I have a question what is the best rat? I have tried Darckomet it was good but now a remover exist and I was getting some errors with crypters. I also tried cybergate but I never got it to work.

LolzSec - August 24, 2012, 4:35 pm

Cool Tutorial man , thank's

I'll try this ... :))

JoKsTr - January 9, 2013, 2:05 pm

I'm not sure how I can test if this is working. I've followed your steps exactly, have my generated .exe file, but nothing seems to happen when I run it. How can i find my errors?

Firefox217 - January 10, 2013, 2:38 pm

You guys do realize that this doesn't work on Windows 7 without a patch right? And even then it doesn't work on 64bit if I remember correctly.

Dragon Hawk - February 6, 2013, 8:25 am

(Jan 9, 2013 03:05 PM)JoKsTr Wrote: [\[CITE\]](#) I'm not sure how I can test if this is working. I've followed your steps exactly, have my generated .exe file, but nothing seems to happen when I run it. How can i find my errors?

Bro it has been quite a while I left this stuff so don't really remember. It has been quite a while I wrote this tutorial. You might wanna look at some other new tutorial.
