Thread: [<tutorial>How to make your computer faster</tutorial>](#)

ForzaSQL - February 6, 2013, 8:16 pm

Hello HackForums,this is my first guide I hope you like it.

Today I will be discussing how to make your computer faster,whether it's the boot time of your computer or just the browsing speed.Now before you read how to be anonymous guides and stuff I highly suggest you follow this tutorial to remove all malware and unwanted stuff.

First of all,download CCleaner <http://www.piriform.com/ccleaner>.

Now you might be asking;"well what the hell does this thing do"?.What it does it that it helps clear temporary files,cookies,recently typed URL's,internet history,etc. Read through what each little box and check the ones that you are satisfied with.Then after just click this

<spoiler>http://i50.[censored].com/denss9.png[/img] </spoiler>.Now after you will get all kinds of stuff and just click this: <spoiler>http://i48.[censored].com/iwm3w3.png[/img] </spoiler>.

Second of all, you can use msconfig to control the amount of applications opened when your computer boots.To do this press the windows key and "r" then type "msconfig" without the quotes.Head over to start up and remove the applications you don't need when your computer boot.This will help booting time by using less CPU.

Third of all,for anti virus protection I recommend AVG or AntiMalwarebytes with the combination of spy bot;links can be found here:[AntiMalwarebytes](#),[AVG](#),[Spybot](#).

These won't ensure maximum protection for your computer since crypters,and FUD java drive by exist,so always take precautions on what you download.Try to keep away "hacking tools" and only download software you know is safe.

Lastly,this is my favorite method and it is called System Restore ? ;now I now what you may be thinking,"oh screw this".However this makes your computer run really quick and gets rid of ALL your unwanted programs.To me this is like a new start.I start fresh and try to download only what I need.Personally I don't really care if I don't backup my files and stuff because all I really download is AntiMalwarebytes+spybot,CCleaner,Sandboxie,and Notepad++,but for some of you it may be a problem.Think wisely before doing this and it is recommended your backup all your important data.

In conclusion,I hope this might be useful to you in some way.If you have any constructive criticism about how to improve my tutorials,then by all means please let me know.

-F0rza

{note:All the software discussed above is all credited to the authors of the programs,I claim no credit for them whatsoever.}

For solid CCleaner add this [CCEnhancer](#)

Nice basic guide for newbies. Thank you...keep on.?

The way how he defends himself makes it look like he did copy/paste this.
But still very informative! Thanks!
