Thread: [| TeachMeFNG | A Simple FakeNameGenerator App | Source Included! |](#)

deiski - February 7, 2013, 12:54 am

TeachMeFNG is a simple program (more of an example) that grabs the Name, Address and City, State and ZIP code.

This was more of a learning experience for me, as I knew nothing about GetBetween, so don't mind my messy code.

Also, yes, this uses a Webbrowser, I don't need tutorials on HTTPWEBREQUEST, I wanted to learn, so I did.

Here is a screen shot of it, as said, it's a simple program, no need for super fancy GUIs <3.

No need for a virus scan as it's a source.

You can download the source here:

<http://www.mediafire.com/?0udq63uqyz3x7e9>

Hope you guys enjoy, good luck to anybody that takes this further! ?

<3

Hackedbyak47imaskid - February 7, 2013, 1:01 am

Maybe you could share some pictures of the application?

I don't really wanna download something I haven't seen.

Updating it with the original post then.

Gerges - February 7, 2013, 5:17 am

Thanks for making and releasing this here.

-Gerges

li0nsar3c00l - February 7, 2013, 7:30 am

just a basic regex :P

nonetheless, thanks for providing...im sure, others could profit

Yes, it was my first go at it, and all the other ones were outdated and not working. :)

Gr0wlit - February 7, 2013, 1:06 pm

Coleak made a .dll for this, and i think it's faster than this since he used webrequest (or webclient).
Good job anyway OP, hope someone can learn from this (for example HTML parsing).

Bonfire - February 7, 2013, 1:15 pm

Another great release Cyan!

I was actually just about to make something like this.

Thanks mate, yes, I seen a lot of people attempting to create this, so I thought I'd give it a go,
thanks mate! :)

I gave Coleak's .dll a go, and it didn't seem to work, not sure if he used FNG's outdated API.

You obviously had no idea how to use it. You're doing too much for such a simple task.

log dot zip - February 8, 2013, 12:51 am

Dude.. I don't see why you would use a webbrowser? Getting the source from a webbrowser is just
as hard/easy as it is to do it with a webclient?

PHP Code

```
<?php
```

```
Dim WC As New Net.WebClient
```

```
Dim src As String = WC.DownloadString("fakenameshittyshit.com")
```

```
'Apply regex here
```

deiski - February 8, 2013, 12:57 am

Actually I did, stop flaming just because you obviously have more experience then me.

Because I never have actually done that before, I am in the middle of doing so.

I am not flaming. Trust me; if I was flaming, you would know. These threads you keep spamming are just annoying.

Not really, even my SkypeAttack got over 90 downloads.

log dot zip - February 8, 2013, 1:05 am

(Feb 8, 2013 02:00 AM)Cyan Wrote: [\[CITE\]](#) Not really, even my SkypeAttack got over 90 downloads. Well, copy pasta the code I provided and replace it with the Webbrowser GetDocumentText code.

If people want to they will, I'm not going to update this as 'twas just an example, I may use webclients or HTTPWEBREQUESTS when I come up with a new idea though. :)

Meh, before you said you where in the middle of adding it? If it's becouse of the "403 Access Denied" error I applied a fix to my code.

PHP Code

```
<?php
```

```
Dim request As System.Net.HttpWebRequest = System.Net.HttpWebRequest.Create(
"http://www.fakenamegenerator.com")
request.Method = "GET"
request.UserAgent =
"Mozilla/5.0 (Windows NT 6.1; WOW64) AppleWebKit/537.17 (KHTML, like Gecko)"
request.Accept = "text/html"
Dim response As System.Net.HttpWebResponse = request.GetResponse()
Dim sr As System.IO.StreamReader = New System.IO.StreamReader(response.
GetResponseStream())
Dim src As String = sr.ReadToEnd()
```

Also, theres a fine line between learning RegEx and copy pasting, just FYI.

Well.. enjoy I guess! Now you won't get the access denied exception thrown at you.

deiski - February 8, 2013, 2:34 am

(Feb 8, 2013 03:28 AM)Firebird Wrote: [\[CITE\]](#) Well.. enjoy I guess! Now you won't get the access denied exception thrown at you.

I never did get access denied? But thank you.

log dot zip - February 8, 2013, 2:44 am

(Feb 8, 2013 03:34 AM)Cyan Wrote: [\[CITE\]](#) I never did get access denied? But thank you. Really? Try this:

PHP Code

```
<?php
```

```
Dim src As String = New Net.WebClient().DownloadString("fakenamegenerator.com")
```

Does it not throw an exception?

deiski - February 8, 2013, 2:58 am
