Legion | How to test your server (RAT)

Hello, welcome to my guide. Today ill be teaching you new members of hacking to learn how to test your own server instead of asking someone too send you a test slave. There are a couple of ways too do this, ill post all the ones I know of.

Before we start testing our RATs, you've to make sure you have the following:

- Your Remote Administration Tool Server
- Portforwarded
- Optional: Sandboxie

Testing with Anubis

- Your server must be unencrypted and not tampered with for this method.

1. Firstly, you want to go head over too the site we will be using

<http://anubis.iseclab.org/>

Spoiler ([Click to View](#))

2. Scroll down the page and you will notice this

Spoiler ([Click to View](#))

3. Now, you can upload your server from your pc or from a direct link.

4. Now that you've added your server too the site, you want to go check the little box so you don't have to wait aslong to get your server checked.

Spoiler ([Click to View](#))

5. Hit submit and you will now see

Spoiler ([Click to View](#))

6. Once it's done, you should see a new install on your rat.

Testing with Sandboxie

This method is quite good but sometimes it doesn't work for some members. What is Sandboxie? Sandboxie is a program which runs your programs in an isolated space which prevents them from making permanent changes to other programs and data in your computer.

1. Download and install Sandboxie

<http://www.sandboxie.com/>

Spoiler ([Click to View](#))

2. Right click on your server and click 'Run Sandboxie'

Spoiler ([Click to View](#))

3. Choose " Default Sandbox ".

4. You should pop up on your rat if you portforwarded correctly.

Testing with a Virtual Maching

1. Get the VMware Player here: <http://www.vmware.com/products/player/>

After downloading it, run the setup. Should not be much trouble.

2. Launch your VMWare Player and click on "Create New Virtual Machine.'

Spoiler ([Click to View](#))

[img]http://img148.imageshack.us/img148/6856/newwizard1.png[/img]

3. The install wizard will popup. In the first step of the wizard you have to chose an ISO or CD to install your OS from.

Spoiler ([Click to View](#))

[img]http://img522.imageshack.us/img522/6856/newwizard1.png[/img]

4. In the second step you have to provide a CD-Key for your OS and a password which will be used for the admin account.

Spoiler ([Click to View](#))

[img]http://img840.imageshack.us/img840/8128/newwizard2.png[/img]

5. Now, in the next step in the install you get to change the name of your vm and where it will be stored.

Spoiler ([Click to View](#))

[img]http://img573.imageshack.us/img573/8869/newwizard3.png[/img]

6. In the fourth step of the wizard you can change the size of the disk size of your virtual machine.

Spoiler ([Click to View](#))

[img]http://img254.imageshack.us/img254/5156/newwizard4.png[/img]

7. In the fifth and last step you will see a summary of the settings for your virtual machines.

Spoiler ([Click to View](#))

[img]http://img222.imageshack.us/img222/4411/newwizard52.png[/img]

8. Click on "Play virtual machine". If you run the machine for the first time, the windows OS setup should start automatically. Just run the setup as usual.

9. Upload your server too mediafire or uppit. Now go too your VM and copy&paste your link into 'Internet Explorer'.

10. Now that you have downloaded your server go ahead and run it!

11. If everything was set up correctly, you should pop up on your rat.

Testing on yourself

Simple, just run it on your own pc and then uninstall it through your rat..

Thank you for reading, please post if you have any questions or just simply send me a message. Hope my guide helped.

? TAQ ? - February 7, 2013, 4:19 am

Nicely done tutorial you have here Ayden.

Blackberry ® - February 7, 2013, 4:20 am

Nice tutorial OP, hopefully it will stop the "test installs" threads ?

SREE - February 7, 2013, 4:22 am

good tut bro~~this will be help full to many noobs :)

Ayden™ - February 7, 2013, 4:28 am

(Feb 7, 2013 05:19 AM)? TAQ ?. Wrote: [\[CITE\]](#) Nicely done tutorial you have here Ayden.Cheers, glad you enjoyed :)

?NoShame - February 7, 2013, 4:34 am

Great tutorial, didn't know about the anubis thing, thanks a lot

rhyman18 - February 7, 2013, 4:39 am

Thanks... it was helpful me, and cheers!

Ayden™ - February 7, 2013, 4:42 am

Enjoy all <3 Im going to bed.

- Ayden

ImSecure - February 7, 2013, 5:06 am

Very simple but effective testing on anubis. Thank you !

Phoeni? - February 7, 2013, 5:09 am

I wonder if you knew this already why you make this thread

Old the ad that keeps getting ed by lq members.

- Ayden

Austerity - February 8, 2013, 2:07 am

Thanks so much for this tutorial, really helpful.

Hard Style - February 8, 2013, 4:12 am

Great tutorial , Thanks for share!

Ayden™ - February 8, 2013, 3:10 pm

Anytime hope you all enjoyed it.

- Ayden

Ayden™ - February 11, 2013, 12:39 am

Bump for the newbs

Hope you learn something
- Ayden

Jekwa - February 11, 2013, 3:03 am
Very nice tutorial mate, keep it up

\$pooky - February 11, 2013, 3:18 am
nice tutorial Ayden™ this will be helpful to many members.

Ayden™ - February 27, 2013, 3:31 am
Bump this, PERFECT GUIDE <3
- Ayden

Ayden™ - April 10, 2013, 5:01 am
Bump, still such a good guide.
- Ayden

Ayden™ - July 18, 2013, 7:02 am
This guide is still free to use.
- Aysen

Violators - July 18, 2013, 7:05 am
Nice tutorial Ayden, I may need this information soon :)

'BlackBone - July 18, 2013, 11:08 am
is it harmful to test it on myself ? ?

Zabuza? - July 18, 2013, 1:55 pm
Thanks! Works perfectly, very HQ member and post.

Ayden™ - July 19, 2013, 1:59 am
Thanks for the comments guys.
- Ayden

thesnipair.24 - July 19, 2013, 2:40 am
Thanks for sharing :) anubis also works with AndroRat just upload your apk, I've tested it works :P

Johnson Licker - July 19, 2013, 2:51 am
Very HQ tutorial. I see people posting threads all the time, and all they want is to test their RAT. This will help a lot of people, well done. :)

Xyzo - July 19, 2013, 6:44 am
Good tutorial, this can be very useful! :D

Ulysses S Grant™ - July 19, 2013, 7:56 am
Nice tutorial but sandboxie doesn't always work I tested my server after I made it into a FUD Java file and the server was stuck in startup so the next time I restarted my computer the server ran outside of sandboxie .

Olof - July 19, 2013, 10:41 am
Thanks for making this tutorial. It's great.

iKick - July 19, 2013, 12:17 pm

I heard anubis distributes tho, other than that nice tutorial

Realing - *July 19, 2013, 12:18 pm*

Very good tutorial bro. This will definately help a lot of RATters out.

Blue Nova - *July 19, 2013, 1:48 pm*

thanks that helped me out a ton! ?

code24 - *July 19, 2013, 7:05 pm*

wow help a lot thanks great share..

Jagster™ - *July 19, 2013, 8:15 pm*

Nice Tut, will direct probably 5-10 members a day from beginner section to this thread :)

Ayden™ - *July 20, 2013, 1:37 am*

Thanks! Glad you guys are liking it!

- Ayden

Bumping this! Hope everyone will enjoy this.

- Ayden

GoatSec - *July 20, 2013, 4:33 am*

If no one already knew this, then ^^ they sure are skiddies. I wouldn't even use sandiebox... waste of space.

Good tutorial though, I like the layout.
