Thread: [Insanelyi Repo](#)

ArSkHelios - February 7, 2013, 6:06 am

Is it just me, or is anybody else getting HTTP/1.1 500 Internal Server Error when attempting to download/update things via Cydia?

Phoeni? - February 7, 2013, 6:07 am

I didn't try that, using other sources, sad hackulos is permanently disconnected :X

This doesn't make sense or answer my question. Hackulous was never mentioned in my first post.

OhBlihV - February 7, 2013, 6:11 am

You may have to wait a bit.

That error (and others) are because of the servers being overloaded after the evasi0n release.

You /can/ keep trying, but you may get the same error and/or very slow downloads.

Sorry I misread,

Just checked and No I am not getting those errors,

use s resources other than Insanelyi Repo, it suck ass anyways

ArSkHelios - February 7, 2013, 6:19 am

If this can be closed, that'd be great. It just started working.

Thanks for the feedback.

Rob. - February 7, 2013, 6:37 am

InsanelyI is still under a lot of pressure from the recent jailbreak. You might have to wait sometimes, but I can confirm that the servers didn't shut down, since I download from them often

Grin - February 7, 2013, 7:07 am

Yes.

And it's people like you who add the source and do not donate.

That's why.
