Thread: [Disable "Slide To Unlock" bar](#)

xDarkBit - February 7, 2013, 10:57 am

USING: iPhone 4s IOS 6.1

Hello!

Does anyone knows if this is possible?

I have that i can unlock the phone with pressing "volume buttons +/-" , but they can still slide to unlock.. How can i remove the slider option?

Not just make it transparent, but remove/disable it?

-Thanks in advance! :)

Php_Shell - February 7, 2013, 11:52 am

LockInfo will get rid of the Lock Clock and the slide to unlock / text very easily.

Some use:

- Lockscreen Clock Hide
- Label Slider (to remove/change the Slide to Unlock)
- Clear Lockscreen (for a clear and clean lockscreen)

Try also:

- Clockify
- ClearMe

... or search the word "Transparent" in Cydia.

xDarkBit - February 7, 2013, 12:26 pm

As i said, i don't want them transparent.. i wan't to disable the slide to unlock option!

Grin - February 7, 2013, 12:50 pm

If you're going to complain, code your own tweaks.

hah, how did i complain? I just said i wanted to disable, and not only invisible...

TheChosenOunce - February 7, 2013, 1:13 pm

It's just the fact that you put a ! Making it look like you were pissed off (complaining)

ohh, hehe.. Nono, i use "!" often, but not like that :)

Php_Shell - February 7, 2013, 1:44 pm

I'm not aware of a way to completely disable the slider... You can only make it transparent, or turn it into a "tap to unlock" feature...

Unless you code a new iOS ! ;)

Grin - February 7, 2013, 8:18 pm

A member gave you the best alternative and your abruptly and rudely turned him down, and insinuated his incapability.

?Support™ - February 8, 2013, 9:13 am

this isnt a complete thing, but download androidXT, make it fully transparent, and put a pattern, that way, sliding the bottom no longer works unless thats your pattern, no one can see it

Yea, i know :)

But i was thinking like: Remove the slider and use activator to unlock the iphone with both volume bottoms :P

thats what it does, you can still unlock it with volume buttons,

Php_Shell - February 9, 2013, 1:49 pm

So what did we say? You can still use Activator to unlock with both volume buttons, and use one of the little tweaks to make it ALMOST transparent, and only "tap-able to unlock"...

Or as said before, use Activator and AndroidlockXT, full transparency (or almost, in case one of your physical buttons break...) ;)

Tutelary - February 9, 2013, 4:50 pm

"NoLockScreen" does exactly what you're asking. Though, I'm unsure if it'll still lock if you don't have a passcode.

Ghost? - February 9, 2013, 6:58 pm

I know of thingsnthat will completely get rid of the lock screen, but not what you're asking for.

Grin - February 9, 2013, 7:32 pm

He's indecisive and asking for something he won't be willing to code. He might as well code it.

If i could code it, i wouldn't be asking for it ;o
