Thread: [Application/Process Blocker](#)

Networkmancer - February 10, 2013, 4:28 pm

I think no one posted this simple way of blocking application in windows so Ill share mine.

Top most

Code Imports Microsoft.Win32

To call

Disable Application

Code appcontrol(True, yourblockprocessnameSTRING)

Enable Disabled Application

Code appcontrol(False, yourblockprocessnameSTRING)

Code Shared Sub appcontrol(accessFlag, exename)

 If accessFlag = True Then

 'adding to registry start

 Try

 Dim CU As Microsoft.Win32.RegistryKey =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer\DisallowRun", True)

 If CU Is Nothing Then

 CU =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer", True)

 CU.SetValue("DisallowRun", 1, RegistryValueKind.DWord)

 CU.CreateSubKey("DisallowRun")

 CU =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer\DisallowRun", True)

 CU.SetValue(exename, exename & ".exe", RegistryValueKind.String)

 CU =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer", True)

 MsgBox("Successfully Restricted " & exename & ".", MsgBoxStyle.Information)

 Else

 CU =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer", True)

 CU.SetValue("DisallowRun", 1, RegistryValueKind.DWord)

 CU =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer\DisallowRun", True)

 CU.SetValue(exename, exename & ".exe", RegistryValueKind.String)

 MsgBox("Successfully Restricted " & exename & ".", MsgBoxStyle.Information)

End If

Catch ex As Exception

```
MsgBox("Error writing the registry" & vbNewLine & "Please use windows admin account",  
MsgBoxStyle.OkOnly + MsgBoxStyle.Critical)  
End Try  
'end
```

Else : accessFlag = False

```
Try  
Dim CU As Microsoft.Win32.RegistryKey =  
Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Policies\Explorer\  
DisallowRun", True)  
CU.DeleteValue(exename)  
MsgBox("Successfully Allowed " & exename & ".", MsgBoxStyle.Information)  
  
Catch ex As Exception  
MsgBox(ex.Message, MsgBoxStyle.Critical)
```

End Try

End If

End Sub

If you want to use open file dialog box

```
Code Private Sub OpenFileDialogBox1_FileOk(sender As Object, e As  
System.ComponentModel.CancelEventArgs) Handles OpenFileDialogBox1.FileOk  
Try  
path = ApplicationExplore.FileName.ToString()  
exename = System.IO.Path.GetFileName(path)  
Catch ex As Exception  
MsgBox(ex.Message, MsgBoxStyle.Critical)  
End Try  
End Sub
```

Very simple tutorial, but thanks for this, sure it will help out the noobs.

I like the usage of the registry, instead of the garbage startup folder.

Networkmancer - February 10, 2013, 5:05 pm

Yeah, Just simple quick and easy tutorial for newbies etc.

benz_vasu - February 11, 2013, 12:07 am

thanx great one bro thanks you :)bro itz nice and easy to learn

Networkmancer - February 11, 2013, 4:40 am

Glad to help you out there. No problem.

great work man, any ideas on how to block site or grab the sites from a webb browser ?

C3oI - February 11, 2013, 9:13 am

^^ to block site use host file editing

Networkmancer - February 11, 2013, 9:55 am

nice one mate good job, is there a way for ie and chrome to ?

Networkmancer - February 26, 2013, 3:55 am

IE is simple. I found chrome but was outdated because of chromes update.

Anon?M ID - February 26, 2013, 5:22 am

nice tutorial man c:

thanks for the share. it's really useful. i will use this on my project in future

Dereshi - February 26, 2013, 5:33 am

Thanks a lot man.

Hope you will make more tutorials, that's really usefull.

Networkmancer - March 23, 2015, 10:13 pm

Post revived :D for reference and to help other folks out there.

psychadelic - March 24, 2015, 1:48 am

Nice job man, looks pretty sweet ?

easykiller - March 24, 2015, 3:01 am

Thanks for this tutorial very good explication !! :)
