Thread: [Simple way of getting Firefox current URL](#)

Networkmancer - February 11, 2013, 9:51 am

What you need to download: [NDde.dll](#)

Next is to Add it as your project reference

Project -> Add Reference -> Browse the dll

TOP MOST

Code Imports NDde.Client

CALL

Code VARIABLE = GetBrowserURL("Firefox")

TextBox1.Text = GetBrowserURL("Firefox")

FUNCTION

Code Private Function GetBrowserURL(browser As String) As String

Try

Dim dde As New DdeClient(browser, "WWW_GetWindowInfo")

dde.Connect()

Dim url As String = dde.Request("URL", Integer.MaxValue)

Dim text As String() = url.Split(New String() {"", ""}, StringSplitOptions.RemoveEmptyEntries)

dde.Disconnect()

Return text(0).Substring(1)

Catch

Return Nothing

End Try

End Function

Want it to get everytime?

Place it in a timer

Its up to you if where you will store it.

Ill show you a listbox example.

Code Private Sub Timer1_Tick(sender As Object, e As EventArgs) Handles Timer1.Tick

Dim counter As Integer = 0

For a As Integer = 0 To ListBox1.Items.Count - 1

If ListBox1.Items(a).ToString() = GetBrowserURL("Firefox") Then

Exit For

Else

counter += 1

End If

Next

If counter = ListBox1.Items.Count Then

ListBox1.Items.Add(GetBrowserURL("Firefox"))

End If

End Sub

fuck your lame ass adfly bullshit.

direct link to the dll
<http://ndde.codeplex.com/>

Networkmancer - February 11, 2013, 10:00 am

So thats what I get from sharing the code? Rather than telling people to PM for the source etc. Lame.

C3ol - February 11, 2013, 11:09 am

all

Stop making me sick "please" So you are basically saying that it's ok for him to advertise and make money off of something he doesn't own and never created? I don't think so.

Artisanal - February 11, 2013, 3:38 pm

Nice tutorial, but AdFly is yust ?

?eumonic - February 11, 2013, 3:49 pm

Quote: "This library is only intended to be used when no other alternatives exist."
Hmmm... I don't think I will really be using this..

Did you ever not realized that many here did not create their own software and source code but was making reputation + links like that through PM method. I did not emphasize to download the .dll through my link. I simply stated what you will need so its up to you to google the .dll or to use my link. ?

(Feb 11, 2013 12:09 PM)C3ol Wrote: [\[CITE\]](#) all

<http://social.msdn.microsoft.com/Forums/en/vbgeneral/thread/ca257f22-115e-43f2-a28d-c806c81061b7> Never been there. This was actually from a C# code.

links and things when the software is not complicated are skids, I could see an amazing program being PM only but this isn't even PM only, It's adfly and you are trying to make some money off of something you didn't make or own...

AX5 - February 12, 2013, 11:36 am

Well i dont minde ppl adding adfly they spend time to post codes and stuff so why not support them with a click and 5 sec of your time. better adfly the survery sites , "cant spell it ^^"

Networkmancer - February 12, 2013, 2:27 pm

Well because their whiners that want to be cool here, but I removed it for them.

steny - February 13, 2013, 5:26 am

In my opinion it is his own choice to put an Adfly Link in it... He posted it. i dint saw any of you do it -.-

Anyway thanks for sharing :-)

TraptCode - February 13, 2013, 10:39 am

Implement a Finally into your Try Catch method. If it connects and an error is thrown, Disconnect won't be called. This can cause a lot of errors.

Also, use `ListBox.Items.Contains()` rather than enumerating each one.
