Thread: [Legion | How to be anonymous](#)

Eternal. - February 12, 2013, 5:08 pm

[img]http://i.minus.com/ieq6viOQ6szdE.gif[/img]

This is a guide on how the everyday person can easily and stay Anonymous. As with everything, there is a lot of methods that can be used, and while I have not included every single way to be anonymous, I have included some good ways for you to cover your tracks against people who would wish you harm.

First let me first go over some basics.

When on a forum, always use a different name on each one. By doing this, people cannot track your activity on other forums.

Don't use real information

Don't allow cookies.

Limit Java script.

Do not use addons to your browser, or have a browser specifically used while browsing anonymously I.E. Tor Browser.

Clear your cache often.

Use a proxy on skype so no one can resolve your ip address.

Create disinformation to keep people off of your trail, following false leads with fake information.

Create a new identity for people who wish harm upon you to find. Will make your real identity harder to find. [Click here for a new identity](#)

Whenever you are connected to the internet, you are being tracked, monitored and logged. You need to clear your cache, remove flash cookies and other crapware to be safe. In the download portion of this tutorial there is a program called Ccleaner, aka Crap Cleaner. It can clear your cache, dns settings and flash cookies, which are the worst kind of cookies. Flash cookies are harder than regular cookies to get rid of, and they track you just like all cookies. Make sure to delete these.

Download ccleaner and create a batch file to easily clean your browser of cookies and dns cookies when you are done browsing. Code "C:\Program Files\CCleaner\CCleaner.exe" /AUTO
ipconfig /flushdns

Virtual Private Networks (VPNs)

Want to ensure you cannot be Ddossed, but need to use skype to talk to someone you may not

trust? Want to make sure you cannot be tracked by someone's forum, website etc? Use a VPN.

A VPN will route all of your traffic through a server, and it is encrypted. This is a great way to ensure you are safe online. Of course having a VPN that does not keep logs helps.

This will even hide your traffic from your ISP, so if you are getting warnings from torrenting, provided your vpn allows torrents, you will no longer receive complaints from them. A VPN can be tracked as easily as your own IP address however if the VPN owner keeps logs of your traffic. I suggest finding a VPN that does not keep logs. Do not trust free VPNs to not keep logs.

Proxies

Proxies are also method of hiding your IP address, much like a vpn they reroute your IP address through a server. The difference is there are more options, and more issues as well. You can use proxies in your web browser, torrent client and there are firewalls that run through proxies proxies. You can force them to be used for only one program at a time, such as skype as well if you so desired. Proxifier is a means to force a program through a proxy. It's not free so I will not add it to the downloads section, but you can look it up.

Tor Browser

In the download section of this tutorial is Tor, which is a way to stay anonymous by using various proxies configured in their browser called Tor browser. You can use the browser, or just Tor if you prefer and know how to set it up.

You can route your traffic through Tor when it is activated with almost anything that uses SOCKS by using the proxy settings below:

IP: 127.0.0.1

Port: 9050

If you have a firewall you may not be able to connect properly. Allow local applications to use port 9050. If your firewall blocks outgoing connections allow it to use port 80 and 443.

Secure your computer

To make sure you are anonymous you need make sure your computer is secure. Run a virus scan, check for malware and make sure you are not infected. If you are, you are already compromised. If you think you are compromised follow the instructions in the whitehat help section of this forum.

Encrypt your information locally To keep yourself secure you should also encrypt your hard drives, that way the data is secure from anyone who doesn't know the password to them. Try true crypt in the download section of this tutorial, it's comprehensive and free. Bitlocker also comes with most installations of windows, which I am sure you all have and works as well. Make sure to use a password that is not easy to guess, for a human or a computer.

Use a Key Scrambler

A key scrambler scrambles your keystrokes so that keyloggers cannot log your passwords and

information. For instance, you type something, lets say you type "hf is awesome" the key scrambler would type something like "sdlskd 54sd5s4fds5dfs20" That way no one would be able to use a keylogger on you. You can find a link to a freeware key scrambler in the download section of this tutorial.

Homeland. - February 12, 2013, 5:10 pm

I have question - why are people so afraid of being online? Maybe it's just people being paranoid, but I never really do any of these.

Also another tip - when using skype, be signed in our your smartphone - that way if someone skype resolves you it picks that up over your computer connection.

corruptionN - February 12, 2013, 5:11 pm

Wow nice HQ tutorial, very detailed and in-depth. Thanks for sharing, will use some of this stuff from now on.

shovan - February 12, 2013, 5:13 pm

hey could u helpme on this forum..plz

Rob. - February 12, 2013, 5:13 pm

So nobody bad can get your information, like your IP, where they can DDOS you. Also, so nobody figures out your real info.

Great tutorial, thought it was going to be something small, but I realized that it was Eternal posting this :P

HQ thread, and great tutorial!

4x4 - February 12, 2013, 5:14 pm

Also another tip - when using skype, be signed in our your smartphone - that way if someone skype resolves you it picks that up over your computer connection.

People who use the internet for things that are not necessarily legal or something they want the whole world knowing would like protection and a way to stay anonymous. Also, personal

information can be used against another in some instances.

OT: This is a fairly decent guide. Thanks for these tips, especially the flash cookie tip. This is something I'd never heard of, and will now use to my advantage.

Jay? - February 12, 2013, 5:15 pm

You left out things such as SSH Tunneling and proxy chains. But don't worry I am going to be making these threads with the Legion header soon. ;)

Eternal. - February 12, 2013, 5:48 pm

Feel free to make tutorials now anyways, you don't have to be in Legion to make them.

TheSpiritScience™ - February 12, 2013, 5:52 pm

Great guide man!! Bookmarked for future reference.

Dubai - February 12, 2013, 5:52 pm

Really short and simple tutorial yet well detailed. Great work man.

SpacePT - February 12, 2013, 7:53 pm

Perfect!

very very useful ?

ty...

teonanacalt - February 12, 2013, 8:05 pm

Good information and guide, easy to understand.

Really appreciate for this contribution. Thank you.

?nonymous - February 13, 2013, 12:10 am

Errors:

First let me first.

Trial- trail*

Color on Keyscrambler headline.

Very fine tutorial. ?

ViRuS_DanGeR - February 13, 2013, 2:10 am

Very good tutorial! free [download](#), watch [videos](#)

Tomb Raider - February 13, 2013, 2:13 am

Nice tutorial just what I needed :)

Posiedon - February 13, 2013, 4:32 am

Very nice tutorial and very well explained...thnx a lot.

InfamousKid - February 13, 2013, 4:34 am

Nice tutorial! I guess i can call me a "anonymous" now! :)

Thank you, fixed the errors. Thank you for pointing them out.

iagsramboo - February 13, 2013, 8:28 am

great guide dude thank you for the help

Eternity4ever - February 13, 2013, 9:46 am

Thank you very much, this is a great tutorial much appreciate the time you have taken to post this.

S?do - February 13, 2013, 3:41 pm

Just to say,

you will never be fully anonymous. If you want to make something illegal like for example carding i would suggest you to do that on a VPS, wich got bought with another PayPal Account. On the VOS should be a VPN and you should connect to the VPS only with a VPN.

Just to say:

If the FBI wants you, they will get you!

TOS:

I don't want to get in trouble if a scriptkiddie uses this tips and do something illegal.

Applied - February 13, 2013, 4:08 pm

You should add Tails live usb as its quite good for privacy and anonymity =) <https://tails.boum.org/>

Eternal. - February 13, 2013, 8:08 pm

No shit lol. I cannot discuss blackhat shit such as carding, nor do I plan to help anyone evade the FBI, nor could I myself most likely so I won't even attempt to say I can.

This guide is for protection, not for doing illegal activities. Legion does not, and never will condone illegal blackhat activities outside of HF rules, so the above of course goes without saying.

(Feb 13, 2013 05:08 PM)Venoz Wrote: [\[CITE\]](#) You should add Tails live usb as its quite good for privacy and anonymity =) <https://tails.boum.org/>

Will look into it, thank you for the tip.

Jay? - February 13, 2013, 8:10 pm

Another thing you could have added was DNS leaking. Just thought of that after re-reading it. It is so good I have read it fully three times. ;)

Eternal. - February 13, 2013, 8:17 pm

For sure, i know that. Legion is not a Blackhat group. I just wanted to say: if the FBI wants you the will get you ;)

Xyzo - February 14, 2013, 8:09 am

very helpful totorial! Thanks for sharing! :D

ImSecure - February 14, 2013, 12:17 pm

Need's , and thanks for this HQ thread !

?nonymous - February 20, 2013, 11:56 pm

More people should read through this. ?

magnusboye - February 21, 2013, 6:55 am

Nice tutorial :D keep it up mannn :D

ishida_2 - February 26, 2013, 7:00 am

bro it help me a lot thanks in advance..<<,,..

kasi-king - February 26, 2013, 7:02 am

NICE!! Tutorial Thanks a Lot!!!

TOr is a nice Browser TOOL

Eternal. - February 26, 2013, 12:25 pm

(Feb 26, 2013 08:02 AM)kasi-king Wrote: [\[CITE\]](#) NICE!! Tutorial Thanks a Lot!!!

TOr is a nice Browser TOOL

Yes indeed it is, but it has something called Tor browser which is preset if you are a noob, or want an easy solution.

Bangman22 - February 26, 2013, 5:39 pm

This isn't 100% anonymous is it? I believe with these methods people can still trace you down.

Eternal. - February 26, 2013, 5:44 pm

(Feb 26, 2013 06:39 PM)Bangman22 Wrote: [\[CITE\]](#) This isn't 100% anonymous is it? I believe with these methods people can still trace you down.

You can be traced no matter what. If you don't want to be traced at all, unplug your Ethernet cord.

WhatEvenIsThis - February 26, 2013, 11:25 pm

In my experience and knowledge, i'm pretty safe the way i am now.lol

mister thug - February 27, 2013, 5:27 am

really nice tut i hope it wil work for me .
gnna try it right now :-)

tw.std - February 27, 2013, 5:40 am

Great tutorial man! always great to see ppl take the time to share the knowledge.

Keystrokes - February 27, 2013, 8:13 am

thanks for the tutorial. It was well put together

thunderstrom - February 27, 2013, 9:06 am

Many thanks for the tut bro :)

Did everything you said :D

Nice Work :D

Paison - August 5, 2013, 8:43 pm

This is me being anonymous :)

[img]http://www.svt.se/cachable_image/1328706439/svts/article8306.svt/alternates/large/anonymou s370.jpg[img]

skankfest2000 - August 5, 2013, 9:47 pm

some good basic knowdlege thx again for this

Firwalled. - August 5, 2013, 10:31 pm

Really nice tutorial, very helpful. thank you so much.

sososoIII - August 6, 2013, 2:40 am

Really short and simple tutorial yet well detailed. Great work man.i love it

A\$AP R?o??cky - August 6, 2013, 2:45 am

Nice tutorial.

Except for me personally i'll never use Tor, FBI track it and use it to find hackers.

:Blackhat:
