Thread: [Will my Laptop run mac and windows in dual boot \(windows first\)](#)

Rod Serling - February 15, 2013, 7:38 am

My system info: <http://www.mediafire.com/view/?0qgdc70bhmj8mcd>

-Nvidia GeForce GTX 675m is gfx card

take a while to read everything my computer has to be sure my Lappy can run it.

If it can, could you tell me how to get the mac iso or something?

ipwnedx - February 15, 2013, 2:39 pm

Yes it should be able to withstand it easily.

O,

Why hack is can I get to do so?

Phobix - February 15, 2013, 3:29 pm

Type out your specs and wireless card/graphics. Not clicking any random links.

You gave me your processor and ram, both of which is nice to have but I need your GPU and wireless card still. Do you intend on dual booting or just OSX? You can run ML btw.

Edit: Just saw your GPU in your OP. Should work OOTB, but in the case that it doesnt, use GraphicsEnabler=No on boot up (ill explain later) to turn off that card and use integrated graphics.

Still need the other stuff tho.

I said i need a version of Hacintosh

I would like a link to download to a copy of a iso that will work for me.

As all the ones i get, when my pc starts it crashes

Phobix - February 15, 2013, 8:36 pm

Yes that's because of a lot of reasons.. And many of which I can't link you because of HF rules.

I asked do you want a dual boot setup or just OSX?

dual strap.

just pm me a link

ill delete the thread afterwords (Junk)
