Thread: [Buffering Against Alcohol | Sobering Pill on the Horizon?](#)

Rydextillixdiex - February 18, 2013, 7:28 pm

Just came across this interesting article on the-scientist:

<http://www.the-scientist.com/?articles.view/articleNo/34407/title/Buffering-Against-Alcohol/>

Theoretically it is a pretty cool concept, I wonder how far they can take it!

Quote:A nanocomplex of enzymes can lower blood alcohol levels and reduce liver damage in intoxicated mice, according to a study published today (February 17) in Nature Nanotechnology. The research, which employed a new technique to assemble and encapsulate multiple enzymes, suggests that tailored enzyme nanocomplexes could be built for a wide range of application...

Well thats cool, I wonder if its going to be sold to the public, etc.

m0n0p0ly - February 18, 2013, 7:31 pm

That is pretty damn interesting.

Great share.
